OK, thanks.....I really didn't think I was right. But many years ago, when false alarms were a big problem in SF. a fellow member of the SF Fire Reserve tagged several of us who would "stake out" fire alarm boxes that had a major history of false alarms. We would keep track of the times and caught several people doing in (I think it was around 1991 or so). Dangerous? kind of, but there is/was a $500.00 reward for this. We collected several times although the city fought us on the ground that "firefighters" were exempt from the reward. However, thru a lawyer, we fought them because we were not deemed "firefighters" unless requested to work at a fire by a Chief Officer or a 3rd alarm, or at a "official" Fire Reserve function of which chasing these turkeys was not. Although the title was never official, we were young and fun with it (not to mention the money). Interestingly enough, it did help quiet down the false alarms. However, it was when SFPD assigned TAC Squad officers, known as Fire Squads that really cut them down. This occurred after 3 firefighters were shot at Laguna & Eddy sts after a false alarm was pulled from Box 3366. These officers would arrive before firefighters in the problem areas like the Fillmore and Hunters Point area, armed with AR15 and Carbine. the kids who were most responsible didn't care much for that and the false alarms dropped sharply.

8179. Sonoma fire

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-01-01 01:08:32 UTC
From: diamondchair502
Topic: 8179 Message: 8179

Did anybody hear more information on a fully involved metal barn fire up on highway 37 in Sonoma County around 0245 hours today? I heard them dispatch on 154.310 and use Orange 3 for Tac. Something about a highway 37 & Arnold ? they sent about 4 Engines including one from Novato and 1 or 2 Watertenders. The IC then requested , I believe two additional Watertenders. Fully involved barn, live wires down.....but I had to start work, so I missed the rest ???? anybody hear anything?

(ps, my girlfriend ain't going to like it, but I am taking my 93 AND 245 with me tonight :-)
(With both 780s in the Car to boot !!! LOL

>

Most of them are about the same system, I can vouch for the Southern
California campuses. Just keep in mind that some systems have added
their own frequencies not used at other campuses, otherwise the
control channels stay the same from what I've seen.

A few of the campuses use a generic talkgroup plan. For example,
facilities, campus pd, escorts. I believe San Diego, LA I think,
Berkeley, and Davis do. I'm positive San Diego does.

8181. Scanner Recorder Problem

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-01-01 19:00:13 UTC
From: robert sanford
Topic: 8181 Message: 8181

I know this is a simple problem but I cant remember for the life of me how to fix the problem.

For some reason Im not getting any audio into my Scanner Recorder program. The hardware aspect is fine but there is a setting somewhere regarding the line in on the sound card that I cant remember where to find.

Someone mentioned it on here once. Its not just the control panel.

Thanks in advance.

Robert

That happened to me, I simply went to System Settings in control panel updated the driver and it worked, a program I installed may have changed the settings. Never knew exactly what happened but it works fine now. I notice that I have more problems with Win ME that 98se with this program.

8188. EMS crews say radios risk lives; Time lost crucial to trauma victims

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-01-02 00:17:16 UTC
From: Mobile11@aol.com
Topic: 8188 Message: 8188

EMS crews say radios risk lives; Time lost crucial to trauma victims Copyright 2001 News World Communications, Inc. The Washington Times...12/28/2001 D.C. paramedics say radio problems with the city's $ 5.3 million communications system are endangering not just the lives of firefighters but also those of residents in need of emergency medical care.Emergency Medical Services (EMS) personnel were issued the same 800-megahertz Motorola digital radios as firefighters in January. They say the radios often fail when workers need to notify hospitals they are transporting trauma patients and when seeking emergency approval to perform lifesaving treatments on asthmatics, heart-attack victims and patients with respiratory failure. The Washington Times first reported in August that the firefighters' communications system fails in more than four dozen "dead zones" around the city. Firefighters this week said they have yet to see conditions improve and that the problem is far more pervasive than first reported. A firefighter demonstrated for The Times the radios' limitations by taking them one floor below street level in an underground parking garage and into a downtown office building. In both cases, the radio emitted a "honk," signaling that it was "out of range." Kenneth Lyons, president of the American Federation of Government Employees Local 3721, which represents the city's paramedics, said those are the same places medical emergencies happen, and communications failures degrade paramedics' ability to provide care."It used to be the exception. In most cases, it's the rule." Mr. Lyons said. "It's just not trustworthy."In case of radio failures, Mr. Lyons said paramedics are supposed to call a dispatcher, who will relay messages to the hospital, a system he called "antiquated." He said more often medics use personal cellular telephones to communicate with hospital emergency rooms.The Fire and EMS Department in January took back the cell phones it had issued to personnel and distributed the new Motorola radios."People are dying," one paramedic said. "Not having the rapid ability to consult a physician to obtain orders denies the patient of every option that should be available to them."The paramedic, who asked not to be identified, declined to cite a specific example of a patient who died because of the faulty radios. The paramedic estimated about 20 percent of EMS calls require advice or approval from an emergency room physician.Paramedics said in a handful of locations, including stretches of Interstate 395 in the District, much of Southeast and the city's central business district, communications are often unintelligible."What you get is garbled," one paramedic said. "You know it's someone talking, but you have no idea what they're saying." The situation is worse underground in Metro stations."You get 'honked out' halfway down the escalator most of the time," the paramedic said.Mr. Lyons said EMS workers sharing information with emergency room doctors don't have the luxury of relaying messages or searching for cell phones or land lines during the "golden hour." That's when the chances of saving a trauma patient dramatically improve, provided the patient gets to the operating table within an hour of injury."What we are talking about is lost seconds that could lead to a lost life," he said.D.C. Fire and EMS Communications Director Lisa Bass said yesterday the department isn't aware of any specific cases in which radio problems have endangered lives." No one has brought that to management's attention, but we would welcome any information that lives are in jeopardy because our job is to save lives, and that is what we are trying to do," she said.Fire Chief Ronnie Few has said the problems stem from the fact that the city needs 19 antenna towers to relay radio signals but has only four.Assistant Chief of Operations Adrian Thompson said yesterday through Miss Bass that the department next week plans to

test a prototype mobile repeater system that could enhance coverage at the scene of an incident. A repeater is a small antenna about the size of briefcase that broadens a radio's area of coverage. Chief Thompson said funds have been earmarked to acquire 70 repeaters - one for each of the department's first-response vehicles - contingent on successful tests."Motorola is telling us these things will solve the problem," said Miss Bass, who was not able to provide a timeline as to when the repeaters could be operational.Motorola officials yesterday confirmed that the repeaters would enhance coverage and that four to six additional antenna towers still would be needed. Deputy Mayor for Public Safety Margaret Kellems said Mayor Anthony A. Williams is committed to solving the radio problem and that emergency preparedness funds appropriated by Congress last week should make the task easier."The city is now in a position to make a major investment in this to eliminate all the Band-Aid solutions," Mrs. Kellems said. Some one out here was asking about Hayward fire now on the ALCO trunk system,here is what I was able to find out hope its right I can not confirm it as of yet.......
ID's
36016 tac1
36048 tac 2
36080 tac 3
Dont know dispatch cause it was not sent to my source just the tacs for mutual aid purposes I guess.....

Now the Question
I just saw a commercial for the new NBC 3 (yes they moved,lol) and they were showing off they're new news copter any ideas on freqs. I think we have some one on this group that does camera work for them (or did) maybe he can help with any other changes that might go along with being a network owned channel

More info. on the MVA on Cummings Skyway in CoCo county near Crockett. apparently one fatal in the car trapped under the big rig. another vehicle stopped to help and was rear-ended at high speed killing one occupant. One of the victims was a grandmother. 3 children sent to hospitals , one critical. CHP says fog may have contributed to the crash, visability was only 100 feet.

The other day I noticed that there's a sign at the eastern end of the platform at West Oakland that says (presumably to trains headed into Downtown Oakland) ``Now Entering Talkgroup K'' ... but all the lists of BART talkgroups I've seen don't have letters.

Think this is for something else?

8199. CHP question

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-01-02 15:06:31 UTC
From: diamondback502
Topic: 8199 Message: 8199

I have CHP Hayward (25 units) and CHP Livermore (118 units) both listed as on the Aqua 42.62 base / 42.84 mobile.
Now this morning I heard the dispatcher say they were going to similcast both the 25 and 118 units for about 10 minutes ? If they are both on the Aqua, why would she say that unless one of the offices is now on a different color ??

2nd question, somewhere I read the CHP was going to open another office called West San Jose. It was supposed to be somewhere near Cupertino. anybody hear this ? anybody know if they are going to add another freq to this area ? thanks
Ed

Up here in redding we have the trunk system and then
there is a 800Mhz simplez freq we can use if we want.
So you can go from a trunk freq to a non trunked freq
up here.

8206. Re: [bayscan] UC Frequencies

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-01-03 03:22:25 UTC
From: Christopher Handisides
Topic: 8165 Message: 8206

Hi Chris. I work at U.C. Berkeley and am familiar with their talk gtroups. They use different ones than UC Santa Cruz. I haven't been around UC Davis much, but when we drove through there, their system would not work on my UC Berkeley trunked bank. Jim

FWIW, I leave my scanner on the (I forget the name of the mode) "search for talkgroups" mode, rather than scanning through pre-programmed talkgroups.

Interesting: I was talking to an SFPD motor officer who said he had never used the 'C' setting. Perhaps this is why. Also, here in SF all 16 'A' TG are assigned as well as most 'B' so 'C' is presumably used for digital (TG 16, 48, 80, 112, 144, 176,etc. Or else there is a different model radio that covers these TG?

But what I still don't know is how can I scan simplex?
Program again using the offset freqs (Have PRO-91) in bank 2?

Thanks for answering.

The regular beat cops and motor officers (4Boys) do not have digital. That is reserved for narcs, vice and the like.
Two different radio setups. Same model radio, just different divisions within the Dept.

B11 on a beat cops radio is much different than B11 on a 5Nora's.

Bundy

>MHz?) to see if it works?

It doesn't work like the other bands. Simplex for 800 and 900 is
always on another frequency for trunked, if conventional then on the
output or another frequency.

For trunked systems, a carrier on the input of the voice freqs which
does not contain the connect tone (Like a PL tone) will cause the
system to identify it as a false carrier, sometimes taking the channel
out of service for 30 sec or so. It happens on ALCO a lot. Some
systems just ignore it and still assign the channel causing possible
interference problems.

So they issue everyone an XTS3000 regardless of whether they use
digital or not? That's costly. I'd figure them for the MTS2000 since
it's a lot cheaper being analog only.

So we've got 'K line' for Oakland, 'C line' for...Colma? What other
ones are there out there? I know the 'line' talkgroups haven't been
properly identified yet.

Yes, all are issued XTS3000's. Fire has the ruggedized version that is yellow. Most of the PD's are model 1's, but Tac, Narc, Command, etc. have model 3's, capable of digital and also encryption, although they usually only use encryption on Command2. Fire uses encryption on EMS1, and EMS2.

DPT uses XTS, but you're right....there are still about 300 MTS2000's at DPW, since they used to be on the Type I system.

There are still some MTS2000's out there, but they are slowly being phased out.....

Bundy

I think that Parking and traffic use the MTS 2000 and maybe DPW.

From: Bundy Chanock
Topic: 8222 Message: 8225

The PD dispatcher panicked when the system went into failsoft and didn't allow the dynamic re-allocation, but told the units to switch to mutual aid, depending on their districts. The Fire dispatcher followed procedure and allowed the re-allocation.

What the PD dispatcher didn't realize and didn't know is that when switching units to mutual aid, a side button must be depressed to activate it. That's the way motorola programmed the PD portables. That caused a number of problems, since officers had not been trained on this.

While all departments have a different bandplan for their units, all radios in SF on 800MHz. do share some common channels, like the EVENT channels and OES1. However, OES1 in an OES radio is on A15. On a PD radio, it's C10. Can be very confusing at times.

Bundy

Topic: 8198 Message: 8227

In general, a radio is only capable of encryption if it was built encryption software & hardware, or at least with space and connections for it to be added. Retrofitting an older or "non-compatable" radio would generally be difficult and/or expensive, if not impossible.

Each radio takes an encryption board. To use encryption you need a keyloader (Very expensive!) to load the encryption key. The system, being it's already equipped for encryption (For the dispatch consoles that do need to monitor and talk), would need even more hardware on the network side for additional consoles. Being they would use encryption so much they would probably (I'd say must) switch (Based on Motorola's recommendation) to a computer controlled encryption infrastructure using OTAR. Using encryption on a regular basis is a serious pain. Being it's for security you have to treat it that way so management of this sort would take a lot if done with people having to keyload radios all the time and proper management of keys. Orange County is a good example of using full-time encryption for LE usage.

Buying hardware to encrypt radios that didn't come with the boards can be expensive.

Bundy

Expensive how?

Aren't all radios capable of encryption?

KTVU/FOX 2 reported tonight that that POS that broke into the home in Atherton Ca last August(reported on Bayscan)was found in the Humboldt County town of Trinidad in a trailer home that is being reported as vacant. He did what we all hoped and shot himself. Case is closed for Atherton and the little girl that this total waist of time almost molested.

OUT!!!

1) With shame in my countenance, I must ask, after 30+ years around the ditchpatching bizz, what's a "POS"?

2) I live <10 miles from trinidad but have had my scanner off tonight (NOTHING ever happens in Humboldt), so I missed the whole thing. Dang. Must've been fairly late...I saw Frank Jager shopping about 4 or so this afternoon (he's the coroner here...good guy)

Any other Humboldtians hear this incident???

Harry / N6URU

I was called out to help set up the Command Post on this sighting.

Brisbane set up the CP at 515 Tunnel Rd. with Daly City, SF, FBI, and SSFPD dog units.

I was called out by 4Xray2, since the SF units were having trouble communicating with San Mateo units on Tac1.

By the time I got there, Daly City tac units had suited up in SWAT gear and a Brisbane Sgt. asked me to called FOB (Field Operations Bureau) and get the SFPD Command Van. I got ahold of the Sgt. in FOB and the Captain of FOB called the CP to assess if it was really needed. They decided instead to have 4Xray2 bring down his Ford Expedition and we worked comms. out of there. I was on Tac1 and PD A8 and PD B15.

We were using SFPD A8 for the perimeter SF units. There were no SF units at the CP except the RAT unit mentioned above. He stayed for about an hour and then told me to relay any requests to SF on A8.

They turned the seach dogs loose in that huge field to the side of Bayshore and within 30 minutes all the newscrews came down and started up their cameras.

They found nothing. But FBI is positive that he's still in the area. They welcomed the press with open arms and even allowed a new copter to fly low and slow over the area. They want as much local publicity as they can get to drive him out of hiding.

Bundy

No, actually few are encrypted right now in SF.

I don't have any idea of the cost involved. Perhaps somebody else here can provide that info. I do know that digital is certainly less expensive than encryption.

Bundy

I'm referring to the RAT unit (Robbery Apprehension Team) that tracks the RAT units that are put in the money packs. The officers on the RAT are 4Xray units.

They drive blue Ford Expeditions (most of them). XRay2's Ford has nine antennas on it. Hard to miss. Plus the red and blues in the grill. <grin>

Yes, I was referring to San Mateo Tac 1. No, SF units do not have that capability. Only the RAT units have it. Also, Command One (the command van) has it. They have a San Mateo Tband Spectra in Command One that lives right next to one of our ham units. The van can talk to everybody, including FBI and will soon also have ham HF in it.

SF cannot coordinate with San Mateo during a pursuit, except over the phone. The exception is when a RAT officer is on a pursuit of a 211. RAT cars can talk on EDACS with the East Bay and also on San Mateo green and the San Mateo tacs.

Yes, it does seem a good idea to have coordiantion and we're going to assist in setting up a meet with the PD from Marin and San Mateo's various cities next month at the Presidio to try to come up with a coordinated plan. It's only going to get harder in the future with both San Mateo and Marin going to trunking systems.

I'm proposing making San Mateo green the standard from San Jose to Marin. I have backing on that, but I don't know if it will fly. Nobody in the East Bay has it. The other proposal I have is to make the CLEMARS UHF freqs. all standard PL's, rather than the mish mosh they have now. APCO has given that some serious thought. Another proposal calls for the purchase of the black box system which San Diego and the FBI has. It would live in either ECD in SF or in the van.

So, what they do right now is call somebody who has all of their capability, which today happened to be me, and I was in the area. I'm hoping that they'll find a way to not have to use civilians like me, though. Very time consuming. And it's not my job, even though it's fun at times.

Bundy

>encryption? Is digital more or less than encryption?

My figures are a little old but they came from a price book Moto offered to a County I onced worked with. They show a board capable of one style (DES-XL) as 380. I'm sure SF uses the newer style called DES-OFB which would be significantly higher, and they may opt for the board which would have dual encryption capabilities (DES-XL and OFB which is double the price of one type).

ASTRO Digital CAI operation for an XTS-3000 is 500. SmartZone operation, 695. Options for radios are pretty pricey. A stock radio (What no one buys) isn't that expensive but once you add options you tack on around 800 to 1000 to the radio. Sometimes a lot more for more sophisticated systems.

On a trunked system you have the option to use either ASTRO digital or 12kbit analog encryption. Being the the madates for PS agencies to go narrowband (Which equates to going to digital) they couldn't simply opt for the cheaper analog encryption. Analog encryption sounds terrible in my opinion and it's much easier to encrypt ASTRO since it's already digital.

>...and how many radios does SF really have?

It's probably in FCC records somewhere, I know they provide it to them but it's not in their online records I can see. Maybe something in the 4000 to 5000 range?

I have the flyer that the FBI gave me this morning.

"2000 Green Dodge Durango bearing Michigan License plate KIDVAN".

I spoke to a woman today who actually got cut off by somebody driving this vehicle on the 101 freeway 2 days ago. He's here....or was. BOL.

Bundy

Bundy .... I know the license plate on the Dodge Durango is
KIDVAN ,but is it oregon or michigan plates ??? do you have that?
thanks
Ed

Prior to his arrival, was asked by 4XRay2 why they were using Tac1 today instead of green and the Brisbane Sgt. told me that Tac1 was being used since it was a North County search and also he thought that the green was being used at the time by another agency. All the San Mateo PD's and the SO have green. It's easy, the infrastructure is there, the licenses are there. Seems a shame to lose it. All it would take is a few repeaters in SF and the North Bay. When the SFPD went trunked my agency got all eight of their repeaters. They're sitting in storage right now. Wouldn't be hard to re-crystal them up for green.

My designator is 1King300.

Bundy

Bundy, thanks for all that information, I gotta say, I am glad you are on
this list. Yeah, the Green is a great idea. I know Palo Alto PD has both the
Green and TAC 3 , mainly for coordination with Menlo Park and East Palo Alto,
I hear them using those two channels plenty down here. BTW, what was your
designator?

No, no, no. While I enjoy scanning very much and occasionally enjoy things like what happened to me today, I'm not a cop and never wanted to be one.
My agency is very involved with interagency communications, with events like the SF Grand Prix, New Year's Eve, the Elections and stuff like that. We fill a niche.

I've been a paramedic for almost 25 years and still enjoy doing that. I enjoy communications, not law enforcement. I leave that to the pros.
Bundy

Yeah, let us know when you capture the the guy, between you two we can save millions of dollars by retiring all those police officers we won't need because of you two. Go get 'em boys.

Topic: 8252 Message: 8252

Following a chase in/around Berkeley on CHP/Bronze (42.4 mobile, 42.12 base) went on a maze all through Berkeley and back onto I-80, over to 580, just took 24 headed for the Caldicott tunnel. At one point a helicopter ("King-1" ...?) said he was "unable to keep up" ...?

I'm losing the mobile now, he's too far away from me.

At one point, he hit 9th street in berkeley @ 40mph: there are speedbumps! The CHP guy let out a "whee-haw!" ...

Ah, King-1 says they are headed for a cul-de sac :-)

Hello:

My name is William Lucas. I am a member of bayscan and have a question to ask.
I have been having trouble accessing the bayscan web site? Is there a new E-mail address? Every time I click the address from my Favorite Place on the tool bar. It takes a while then I get a dialog that say it can't be open or it busy.

Any suggestion. Please advise.

Thanks

Topic: 8265 Message: 8265

Title: UNIDEN DEBUTS NEW APCO 25 DIGITAL SCANNER MODELS

SubTitle: Electronics Giant to Sell Software to Customize Monitoring Experience

Synopsis: Uniden unveils its much-anticipated APCO 25 digital scanner models, including base and handheld units slated for distribution in late 2002.

Body: LAS VEGAS (January 8) ? Uniden America Corporation today unveiled its new digital scanner line for 2002, including the consumer electronics leader?s much-anticipated base and handheld APCO 25 digital scanning models. Speaking at CES, product manager Scott Carpenter showcased the new scanner products, underscoring the company?s commitment to keeping its customers at the forefront of scanning technology. ?Our retailers have been pushing us for a Uniden APCO 25 product for months, and our new BC250D handheld and our BC785D base/mobile scanning unit represent the fulfillment of our promise,? Carpenter said. ?With the ability to monitor conventional, trunked and APCO 25 conventional and trunked systems these models are state-of-the-art radio scanners. According to Uniden representatives, the Bearcat BC250D and the Bearcat BC785D models, which are slated to hit shelves in late 2002, offer 1,100 channels, 10 banks and a frequency

range of 25MHz ? 1300MHz. The BC250D comprises all of the features of Uniden?s market-leading BC780 XLT in a handheld model, plus adds APCO 25

capability and an additional 600 channels. Users of both models must purchase an APCO 25 card, the BCi25D, separately. ?We?re pleased to be bringing these great Bearcat APCO 25 units to market,? Carpenter said. ?We expect more big cities to migrate to the APCO 25 digital technology,

like Los Angeles did this past year, to ensure agency interoperability among police, fire, EMTs and the like ? and we know news organizations, businesses and consumers will want to monitor their signals.? Uniden officials stressed that APCO 25 digital scanning technology simply gives

users the ability to monitor the day-to-day activities and signals of standard city and government service departments ? but in no way allows users to monitor encrypted signals from national and local security organizations. In a separate announcement Uniden also announced its plans to market its own easy-to-use scanner programming software, which it is demonstrating in its booth at this winter?s annual Consumer Electronics Show in Las Vegas. The software will allow the users of all Uniden scanners with data ports to easily program frequencies into the channels and banks of their scanner. About Uniden Uniden America Corporation, the North American subsidiary of Japan based Uniden

Corporation, manufactures and markets wireless consumer electronic products including cordless telephones, business telecommunications systems, multimedia communications devices, scanner radios, CB radios, FRS, Marine radios and other wireless personal communications products. Based in Fort Worth, Texas, Uniden sells it products through dealers and

distributors throughout North, Central and South America. # # #

I've been listening to CHP a little recently, mostly BRONZE
(42.12/42.40) in the East Bay. Several times now I've heard what sound
like multiple dispatchers stepping on each other onthe base frequency.
The last time I heard this, one dispatcher was male, one was female.
They both seemed to be talking about stuff in the same geographic area.
Has anyone else noticed this?

Also, from last night: is King1 a CHP helicopter, or was that Oakland
or something?

Thanks,

/jordan

When CMED declares a Yellow Alert, it automatically set a few things in motion. While the OES duty officer will respond to anything 2alarm or greater, a yellow will page down the Director of OES, the Chief of SFFD, the Mayor's Chief of Staff, the on-duty officer of DPH, the Chief of ACS and it activates HEARnet for the hospitals. The hospitals are then notified of the alert and asked to give CMED an accurate bed count for emergent patients.

Is that THEIR words? "Funding is a possible problem, but the plans are firm."

A fine example of bureaucratese - like "nothing is too good for those taxpayers to pay for."

Exactly!..... I for one do not wish to be taxed anymore for a Radio System
that is going to cost us all in the end. I see that other Counties are still
having problems with the more elaborate Communications Equipment. I know
that we need a better system but, this is not the time to be talking about
more *COSTS*.....

When you have Cities like Danville (With Blackhawk), Alamo, Orinda,
Moraga how are their funding problems? Not my field but with so many
Cities with multimillion dollar homes you would think....

Time to up that property tax!

ALL of Contra Costa County would be greatly affected. I for one think that our Tax rate here in East County is too high as it stands. I love to Monitor all the agencies but,
am not willing to charge my customers more and pay more on Property for New Radios!.....
Just my opinion but, why has it taken until the economy turned sour to do a huge project such as this?..
I am however, in agreement that most agencies are not up to par and that it would enable most agencies to talk to each other more easily.... At what cost though?...

The shape of COCOCO is not very suited for trunking. It is kind of T shaped, i.e no real central location, plus mountains all over the place with population in the valleys. You would need sites in Richmond, Antioch, and then all the way down the 680 corridor to San Ramon. Diablo shields part of the county, so you need a site there. Bolinger Canyon would be a problem, so probably Rocky Ridge would need a site. Then there is Franklin Canyon. Maybe half a dozen sites would do the trick.

A huge undertaking that is needed but, funds are not exactly readily
available at present time. I'm for it if there is a way that Taxpayers would
not feel the burden
at this time.
Antioch had to erect a new Tower to be able to Receive and Transmit back and
forth over the hills south of Antioch/Brentwood. That must of been met with
at the very least a few naysayers.
The idea of a new system is great, it's just the general
public may not be ready for more taxing...

If you start notifying the public that you want to put up antennas i.e. repeater sites etc, I would guess that you would get a negative response like you have in Marin with citizens no wanted them in their backyards etc.
Ed
from a "scannernuts" point of view (very selfless here LOL) I get 160.110 and 159.35 REAL well on the peninsula ,,,,,can we leave "well enough" alone ? Seriously, are there any complaints from LE or Firefighters about the present system. Is the county being sold a bag of goods from EDACS or Motorola?

Actually, it would make it more difficult for most agencies to communicate in the event of a need for mutual aid.

We currently are all moving away from the days when we could communicate between counties easily.

8291. RE: [bayscan] Contra Costa SO radios

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-01-06 03:55:55 UTC
From: Brent Finster (DSL)
Topic: 8281 Message: 8291

I've been watching the various posts this afternoon and wanted to clarify a few things. The newspaper article in the Contra Costa Times was somewhat misleading.

First of all, CCCSO has been looking at designing and purchasing an 800 MHz. trunked system for some time (about 2-3 years). CCCSO is having lots of difficulty with interference from co-channel users and they don't have enough clear frequencies to re-build an adequate VHF highband system in their opinion. CCCSO was originally looking at funding a Sheriff system and contracting out additional agencies on a per radio basis. We (fire) were participating in the meetings but not committed to the project. We have just (sucessfully) implemented a new VHF highband conventional analog repeater system covering the entire County. San Ramon Fire is in the process of implementing a compatible VHF highband system in the I-680 corridor in the southern part of the County. We are quite happy with the new VHF system and feel that it will satisfy fire's needs for the next 5-10 years.

When the original design for the Sheriff's 800 MHz. system was done, it was going to be a $30 to $40 Million dollar system and would need in excess of 20 sites to adequately cover the County. The reason is that there are very few high level 800 MHz. frequencies left in the bay area, therefore the system design was based on using low level sites (similar to cellular systems). During the summer of 2001, things changed and the County Administrator's office determined that it was in the best interest of all of the possible players, to build a countywide enterprise radio system rather than it just being the Sheriff's system (the CC Times article missed this point).

The Administrators office (not the Sheriff) is the project manager for this project. Funding has not been determined yet to my knowledge but they are kicking around all possibilities. This started prior to the economic downturn. I, as you, don't know where the money would come from...but back to what I do know. The first step in this plan was the contracting of a firm to do a countywide communications needs assessment. The contract with Federal Engineering has been signed and they will be doing this during the first part of 2002. Nothing yet has been decided that the County will go to 800 MHz. It may end up being 700 MHz. with the re-farming of TV stations 60 to 69. It may be analog...may be digital....may include Richmonds EDACS system...may be compatible with ALCO's system...who knows. The consultant will give us options in a few months. The fire service in Contra Costa County may very well be included at some point in the future...but for the next 5 years at least I would plan on you listening to us on our VHF system (CON CENTRAL 160.110, CON EAST 159.615, CON WEST 159.735 or SAN RAMON FIRE 153.995).

Before things got to far out of hand with this article, I thought I would give you the straight scoop at least from my perspective...Let me know if I left some holes in the story!

EMS has always been on B-15. I work for St. Joseph's Ambulance and that is where they dispatch all the private ambulance companies to calls and where we talk to SFFD Dispatch when we need anything such as hospital divertions. We get yelled at from SFFD if we use A-1, unless of course we can't get through on B-15.

I don't see how, along with radio network upgrades, the communications center would be overlooked when upgrading. Along with that upgrade should come the capability to patch necessary conventional frequencies together along with a trunked talkgroup. Patching together VHF, UHF, 800 CLEMARS, and a trunked TG together should work fine. What more do you need? That is unless agencies don't have them programmed in as-is.

I'm familiar with it being done and it's worked fine. Are there not interagency coordination meetings on how to communicate together when an incident occurs in the Bay Area? Each agency in this area, regardless of conventional, trunked Motorola, or trunked EDACS should have an established plan on how to communicate together. Now, with the technology we have, it is easier to communicate better, it's all in how you design your network. Naw, lets wait for it to happen and then complain why it doesn't work because of lack of planning<sarcasm>.

I don't see how, along with radio network upgrades, the communications center would be overlooked when upgrading. Along with that upgrade should come the capability to patch necessary conventional frequencies together along with a trunked talkgroup. Patching together VHF, UHF, 800 CLEMARS, and a trunked TG together should work fine. What more do you need? That is unless agencies don't have them programmed in as-is.

Trying to patch all you mention above with Tband trunked systems and then make it available to the officer in the field who is in a pursuit into another jurisdiction and allowing those units to talk to the pursuit vehicle is proving to be a real headache.

I'm familiar with it being done and it's worked fine. Are there not interagency coordination meetings on how to communicate together when an incident occurs in the Bay Area?

No, there are not. Not comprehensive ones. They're about to start, though.

Each agency in this area, regardless of conventional, trunked Motorola, or trunked EDACS should have an established plan on how to communicate together. Now, with the technology we have, it is easier to communicate better, it's all in how you design your network. Naw, lets wait for it to happen and then complain why it doesn't work because of lack of planning<sarcasm>.

The problem is that individual counties design their own systems without a thought as to how to communicate with other counties. I've had numerous conversations with SF units in pursuits over the Bay Bridge. They want to be able to talk to Oakland, Alameda etc. Currently, except for a couple of 800 mutual aid channels which most field personnel don't know how to find, they can't. Agencies in the Bay Area are relying on the telephone much more than they should be.

Have been reading all this stuff about CoCo County going trunked. Didn't they just upgrade???? to a new FANSY high band repeater system that was supposed to solve ALL THERE PROBLEMS??? My suggestion is for the county to launch a Geo-sinc satellite and just use broad band audio video in all the units, broadcasting simultaneously, all the time so we will all know what's going on all the time! The county com guys still won't if they're stupid enough to think a trunked system, at least with current technology, would work. Jim

8298. space shuttle audio link

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-01-06 08:32:22 UTC
From: Jim Gammon
Topic: 8298 Message: 8298

Hi. A while back. someone listed the kron web site as one where you could listen to NASA activities. I tried it a couple days ago and it still worked. Just a few minutes ago, it no longer worked. I suspect this is because Kron 4 is no longer an NBC affiliate. Does anyone have any ideas about whether or not this link will continue during future shuttle missions or or any other links that use real player? Thanks for any info. Jim

Insulin is available without prescription at a pharmacy. Syringes require a prescription. However, many diabetics are treated only with an oral medication which also requires a precription.

Here is a link where if you have a decent broadband connection you can
watch NASA television on the net:

http://spaceflight.nasa.gov/realdata/nasatv/index.html

also

http://www.unitedspacealliance.com/live/NASATV.htm

this is another good link for information on current shuttle missions
including sighting opportunities:

http://spaceflight.nasa.gov/realdata/

Hi Robert. Yah, but I don't have broad band at home, only a veeeeery ssssloooo 56K modem so that's why the real audio link from KRON worked great. And besides, I din't have to see the flicks as I can't see anyway. 73's from Jim, WA6EKS.

I have always gotten a chuckle out of the way different agencies do things. When SJPD is tailing someone, they're really careful to make things a bit obscure - "...he's heading northbound on the J street..okay, turning left onto the S street...", etc. The DEA, in Santa Cruz at least, was startling in how much information they gave freely over the air. (By the way, they've already gone encrypted over here, so I'm not spoiling anyone's fun..) I about fell out of my chair a couple of times: "...he's talking to the white guy with the blue baseball cap and the red jacket...yeah, right in front of Bookstore Santa Cruz..." This sort of stuff was typical, even when they were running what sounded like fairly risky operations, on 'known' DEA freqs that are plastered all over the internet.

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-01-06 21:56:25 UTC
From: Mike Mellone
Topic: 8281 Message: 8311

Anyone who has worked in or around county politics should know that when the County plans things like this, it usually takes much longer than expected. Like it or not, Contra Costa is in the planning stages of a Motorola APCO-25 compliant system. The Sheriff recently wrote in his latest internal newsletter (paraphrase) that the new regional communications system is underway. This is all word of mouth, but from what I've heard, the system will be much like that of Alameda County's, as the county attempts to sign on cities like Walnut Creek, Concord, Antioch, etc.

Yes, they did switch to a new highband repeater system a few years ago, but the system is still plagued with coverage problems, especially in West County. Officers/Deputies have frequent problems using their portable radios in Crockett, El Sobrante and the Richmond Heights area. The Deputy Sheriff's Union has made frequent complaints alleging officer saftey issues, and now the County is aparently listening. The County is seeking grant money to help fund the multi-million dollar system, and acknowledges the necessity of possibly 2-3 times as many repeater sights to cover the challenging geography. COCO is also looking to woo Richmond away from its EDACS system eventually, but if unsuccesful will develop common frequencies, much like that between ALCO and Oakland or BART. All this information is from word of mouth, but in writing, the Sheriff has made this system a priority.

-Mike

Have you tried the old fort ord freq.s ?I have them programmed and I am
pretty sure as far as fire and police they are same fire is149.800 pd is
148.750.....
If you find out any different please post!!At 10:15 AM 1/6/2002, you wrote:

Good question Ed ....
I always wonder why they don listen to us and have twenty banks now that
would help lot too.....At 11:44 AM 1/6/2002, you wrote:

I agree with your thinking, don't know if I really need 20 , maybe 15 would be enough. But 20 with 50Xbank wouldn't be a bad idea. Don't really want 100 in each bank. Of course, you don't have to use all 100. Still, I like the idea of a few more banks. oh well, can't have anything.
Ed

Harry, thats even a better suggestion. For instance, In my San Francisco bank, there is plenty of action within the trunked system, I would have no need for many conventional FREQs other than mutual aid stuff. Of course, there is always the costs. but with 1100 channels, you can always customize your banks simply by locking out unwanted channels.
Ed

Thanks, that frequency was included in the message that Harry sent me.
I'm in Santa Barbara Co. now but I'll try those frequencies when I visit
the area.

Hubert

>
> The problem is that individual counties design their own systems without
a thought as to how to communicate with other counties. I've had numerous
conversations with SF units in pursuits over the Bay Bridge. They want to be
able to talk to Oakland, Alameda etc. Currently, except for a couple of 800
mutual aid channels which most field personnel don't know how to find, they
can't. Agencies in the Bay Area are relying on the telephone much more than
they should be.

> I have always gotten a chuckle out of the way different agencies do
things. When SJPD is tailing someone, they're really careful to make things
a bit obscure - "...he's heading northbound on the J street..okay, turning
left onto the S street...", etc. The DEA, in Santa Cruz at least, was
startling in how much information they gave freely over the air. (By the
way, they've already gone encrypted over here, so I'm not spoiling anyone's
fun..) I about fell out of my chair a couple of times: "...he's talking to
the white guy with the blue baseball cap and the red jacket...yeah, right in
front of Bookstore Santa Cruz..." This sort of stuff was typical, even when
they were running what sounded like fairly risky operations, on 'known' DEA
freqs that are plastered all over the internet.

8319. Re: APCO 25 DigitalScanner question

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-01-07 00:19:44 UTC
From: sr_radio
Topic: 8309 Message: 8319

Hi there, anyone from Uniden monitoring this group?

How about putting in variable banks...

When programming some Motorola systems the Talkgroups "Modes" come in
16 Talkgroup increments. Sure would be nice to put one mode per group.

I'm not going to CET but could some of the folks going mention this to
Uniden at their booth?

Thanks

Ed

8320. [bayscan] Re: Variable banks and CES

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-01-07 00:32:54 UTC
From: Jake Hickok
Topic: 8309 Message: 8320

I put in this order last year too. I will do it again this year to the engineers at Uniden who will be at the booth. Hopefully there will be a working model of the unit there unlike the cardboard box, such was the 780xlt when it was publicly announced. I've wanted variable banks myself, hoping to best use my scanner and ALL the channels. I would like to be able to put a city in one bank and not have to waste channels or waste a bank because the city uses 35 freqs vs the 30. I can program Bank A to be so many channels, Bank B to be so many and so forth. Sure, a computer program might help, but you can't have a computer attached to the flipping scanner ALL the time.

I'll keep all the lists posted when I head down there Thursday and Friday (I'll miss the actual debut of it, but it'll still be there. ;)

Jake

Hi Jake. While you are there, please put in an order for Uniden to make their scanners accessible to folks who can not see the LCD'S. Please!!
Thanks, Jim
PS. I wrote to them early on when the rumor first came out and the person said they would refer the matter to the product developer. Right! We'll see. The optimal solution would be an add-on plug in speech synthesizer module that would read out the frequency, trunked mode, and whatever else the LCD shows the user. I'd pay extra for that option and I bet some sighted users would too if they found themselves in dark environments.
Thanks, Jim

Reach 2 was enroute to a MVA somewhere on 80. Not related to this
accident. The car was wrapped around the front of the train. Officials
were enroute from sac to investigate.

San Jose Fire is working a drill on command 4 at S.J.I.A. , an MD80 crash simulation. ironically, earlier this morning , they had an Alert Two, a twin engine United Commuter with 33 souls on board come in with total hydralic failure. it landed safely.

LAFD is working and has knocked down and maybe controlled by now a large fire in an apartment complex that was under construction. Both MSNBC and CNN had live coverage, plenty of masterstreams and a few ladderpipes.
may make the evening news for those who missed the live coverage.

Can anyone point me towards a good reference for Alameda Co
talkgroups.

Kelty's book are a good start but I have about 25 that I have saved on
my PRO 92 that aren't listed.

I'm too far away at home but listen on my way to work. Not enough
time to figure them out myself.

8337. Oakland EDACS Help!

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-01-08 05:06:39 UTC
From: mikesrvca
Topic: 8337 Message: 8337

Okay Fellas...

I really enjoy listening to Oakland PD's EDACS system with my BC780XLT. I'm having a hard time trying to understand the whole patch concept. In the morning, I'll notice traffic only of Patrol 3, but then I'll hear the dispatchers say something about splitting the channels, and they'll open up Patrol 2 and 1. Sometimes Patrol 2 will simulcast Patrol 3 traffic, and then just yesterday... I heard absolutely nothing! After monitoring the control channel, I discovered that PD traffic was using a new ID, which is 02-011. I've searched all over, and I haven't seen this ID published before. Is there any sort of logic to this?

-Mike

I've noticed lately on CHP I hear SJ Base on the HWD Mobile freq (sorry, don't have the freq's offhand). I have a mobile programmed with groups of two channels, ie.e. group 1 is Hayward, with hayward base and Hayward mobile, no scan delay, etc. And I've noticed that SJ base is rebroadcasted on Hayward mobile. (or is it the other way around?) Usually when I go on 880 north from 237E, I switch over to Hayward, and notice it. Is it just me?

I've also noticed 'car to car' traffic on the base frequency - Is this normal? "Hey Jim, did you get the license of the passenger in the grey car?" "Nope, I thought you may have, I'll get it..." type stuff.

Also, does anyone have a 'map' of where each 'color' is, i.e. Hayward is in this area, etc.

Thanks.

May have something to do with the number of dispatchers on duty, just a guess. Santa Clara Co..... Sheriffs do the similcast every night, they dispatch to the Cupertino and West County area until 0700 on their main channel. Then they do the "split" and dispatch that area on Channel 2. just guessing however

There are two possibilities for this.

1. Oakland CHP (Bronze) has the same base frequency as Sacramento North (Gold) 42.12. The mobiles are on different frequencies.

2. Several of the "Bay Area" CHP transmitters are on Mt. Diablo and you could have been getting some mixing. The transmitter for OES 1 is also on Mt. Diablo and occasionally we hear the CHP coming through on the 39MHz input to the 154MHz output.

1. Yes, it is common to have the car-car comms on the BASE frequency. It's like talking on the output of a repeater. (Yes, I know they are NOT repeatered, just an analogy)

2. What you may be hearing is a patch so one dispatcher is covering two areas. This is a common practice during low radio traffic volumne times or if they don't have someone to cover the slot for whatever reason.

I'm talking about the opposite: two dispatchers on one channel.

The explaination of North Sacramento (Gold) bleed sounds right, though
I'm surprised they reuse that frequency so close.

/jordan

It's been that way forever and ever. They are on
different PL tones. Oakland is Golden Gate Division
and Sacramento North is Valley so they don't hear
eacother and the mobile frequencies are different.

From: Harry Marnell
Topic: 8351 Message: 8351

It's tough as hell to get anything substantive out of Uniden. I would suggest using either or both of Jim Coburn's two parallel new yahoogroups specifically about the alleged 4thcoming (as in 4th quarter of 2002, subject to slippage) uniden digital scanners:

http://groups.yahoo.com/group/UnidenBC250D (portable)

http://groups.yahoo.com/group/UnidenBC785D (base/mobile)

Most of the stuff so far, of course, is equally relevant - or irrelevant - to either group.

As well as my own swill (I mean swEll) site at
http://www.snowcrest.net/marnells/uniden-digital.htm

Fire in Ridgewood , New Jersey was 3 alarms (via IPN) From what I saw on TV , sure thought it was more, fully involved church,roof collapse , looked like some adjoining buildings involved (maybe part of the church complex ?)knocked down by about 11:30pst. Plenty of master streams , at least 3 ladder pipes.

It depends on where in Livermore you live. You
certainly won't get SF or Oakland in Livermore, I
can't even get Oakland from atop a hill in San Ramon.
Basically, your coverage of these systems is limited
to line-of-sight. You should be able to get BART if
you live near the I-580 corridor. Try purchasing a
gain 800 MHz antenna to solve your BART problem.

OK, Jeff, it looks like 145.33 and/or 443.8

But don't expect constant chatter...and what IS on those repeaters won't necessarily be rail-related. It doesn't look like there are any regularly-scheduled get-togethers - UNLESS SOMEONE CAN TELL US DIFFERENT? <hint>

> I can't even get Oakland from atop a hill in San Ramon.

I have a hard time with Oakland here in Berkeley on both my -780 with a
big ole antenna in the attic and my -235 with an Austin Condor 12"
duck. I do much better in the truck with an AOR MA500 mag-mount. I
was thinking about getting an 800MHz antenna and a switch for times
when I wanted to hear that kind of stuff. I get SF pretty well, though
I have LOS to twin peaks.

The real zero in my experience is ALCO: I can't get anything here.

8362. A festering sore

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-01-09 10:25:02 UTC
From: Harry Marnell
Topic: 8362 Message: 8362

May I vent a pet peeve that really drives me crazy? Thank you. This may be peculiar to California, but it seems that everywhere I go these days police dispatchers have an over-abundance of "OUT OF" that they have to broadcast with every 10-28 (vehicle registration). They must be saying it purely out of (bad) habit, because it certainly doesn't serve any purpose, nor does it usually make any sense whatsoever. And it wastes a few milliseconds of airtime each time.

16-101 runs a 28 and the dispatcher dutifully tells him: "16-101 Humboldt, 4ABC123, a 1998 Chevrolet Sedan, to John Smith, 123 Main Street out of Cedarville" Now 123 Main Street sure sounds like it's right IN Cedarville, but no matter; EVERY registered owner apparently lives OUT OF his/her home town.

CHP dispatchers seem to have the greatest attachment to OUT OFs, and since they're everywhere the locals hear it and start parroting it. Give a listen to just about any agency and see if their dispatchers are doing it. I know it won't be stopped, no more than that ridiculous, meaningless, airtime-wasting "Be advised" will ever be stopped, but I just had to get it off my chest.

It's nothing, I know, but every time I hear a registration or driver's license check to someone who's "out of San Francisco" I find the need to yell at my scanner. "NO! 1164 Van Ness is IN San Francisco, it's not OUT OF San Francisco. It's right downtown"

Thank you. Now I feel better. Would you give a listen and tell me whether it's an epidemic? Is it just happening out of California, or have dispatchers out of other states caught it too?

Harry Marnell, out of Humboldt County. (Actually I'm IN Humboldt County)

Sometimes my 780 will stop on a programmed Id, but nothing is heard and the scanner jumps between scan and search, kinda like it is stuck on that Id. I always have assumed that it is a non-active Alco Id. Is this the case. Usually I have just locked them out and checked for activity at a later date..Any ideas about this.. Thanks to all ahead of time!!!(this is always on ALCO Trunked only)

...

Which ID do you have programmed? ALCO's system has
both wide and local area frequencies. If I remember
correctly, you're out in Livermore area, and you'll
only be able to hear IDs that use the wide area system
(i.e. ALCO Sheriff, ALCO Fire, Fremont PD, Dublin, and
AMR South). ALCO has many users, such as San Leandro,
Union City, Newark, that use the local area
frequencies, and in these cases, you'll only be able
to hear them if you're close-by. Not sure if this is
what you're experiencing, but my 780 does the same
thing when I try to monitor those IDs from San
Ramon... when I drive to Hayward, I hear both wide and
local systems fine.

As far as local and wide areas. That may be true if you live in Alameda County. But across the bay, I can hear both systems including ALCO Fire and Sheriffs EAST. I can also hear Alameda City Fire which should be a local system, as well as San Leandro P. D. and all other local P.D.s and F.D.s

best way to put it...what is happening is the scanner knows that ID is talking because its getting the data from the control channel, so it stops on it...since you are so far away and cant monitor it, you dont hear anything.

Do a search of the archives and you'll find my post that describes how
they currently have the system set up. They change it once and a while
(Which frequencies cover which areas) but Mike M. summed it up.

From: Scott West
Topic: 8383 Message: 8384

Jeff,

I'm in Mountain View and cannot pickup SF's TRS (from here), but then again I don't have an outside antenna. Several other's on this group have reported no success and they live a lot closer.

You won't have any problems programming the talkgroups if you're using software and can't pick up the control channel as its not required.

Its been a long time since I programmed my 780 by the keypad, but if you can't enter the talkgroups without picking up the control channel (like the 235 and 245) then you can always temporarily enter another like systems control channel that you can receive (Santa Clara, ALCO), enter the talkgroups, and then delete the temp control channel.

I doubt your going to be able to pick up the SF system since I couldn't get
it from here in Sausalito right across the water from San Francisco until I
moved apartments to the other side of my building.

I didn't move for that reason but Im really glad I can get it now.

800 MHz is a very funny band and does not travel anywhere near as far as
conventional UHF of VHF frequencies.

Jeff, with an external antenna he "might" get SF. 2) If you program it with software, no you don't need to get the control channel. Heck, SF is a wonderful city, drive up have lunch and program it LOL. You might note, I can get SFs system with my Pro 93 , but only at times and weak, still, it draws in the signal better than my 780s and I LOVE them. Good luck
BTW, have you heard my favorite dispatcher lately, I miss her LOL

Oh, Jeff, one other thing ... if he leaves on the East side of Sunnyvale, near 101 or 237 , he probably has a better chance of getting it. He may also get Oakland from there. I get Oakland easier than SF.

8393. What sort of 'behind the scenes' info transmitted on trunked systems.

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-01-13 02:02:24 UTC
From: Christopher Handisides
Topic: 8393 Message: 8393

I've been going back and forth, debating about installing a discriminator tap on one of my scanners. Before I go to all that trouble, can someone clue me in as to just what sort of additional information above and beyond talkgroup numbers that can be pulled off of trunked systems (mostly Motorola Type II systems) with the proper software?

Thanks :)

Chris, go to my webpage and click "Downloads" then on the link for
"event.txt." It displays the events, though some may need to be
updated, that Treport displays. About all things displayed in the
background on Moto systems are displayed by Treport, or will once I
crack it.

Wayne,

If Dublin is using the FREQs that the books says they should be then they are the following:

Police: 155.250
Fire: 154.235

Those are the only 2 listed ..please note that they may have switched to the ALCO trunked system...Hope this helps..if anyone else has info I am sure that they will post it.

Jeff

Those 2 Ids are listed as Alameda County Sheriffs Dept. According to Dublin's webpage, Law Enforcement duties are handled by them and they do not actually have a Police Dept.

They do have a police department, funded by the City of Dublin...the police officers that patrol the city are Alameda County Sheriff Deputies.

It sounds like they may have a police dept. in name only. It states they have a couple employees that do some work. But NO police officers. American Canyon does the same thing. the patrol vehicles say American Canyon on them, but are manned by Napa County Deputy Sheriffs.

The city of Dublin has a contract with the Alco Sheriff's dept. The officers ARE Alco sheriff's. They do work for Dublin. They are on the Alco system(800 trunked).The same goes for The Dublin fire Dept. They are actually Alco fire contracted to the city of Dublin. Dublin P.D. has some heavy activity now and again. people don't think that would be the case, but it is. I hear great active calls all the time from Dublin..

It's not really in "name only." There are people in the department that work for Dublin Police Services, mostly clerical staff and parking enforcement. The officers are contracted out from the Alameda County Sheriff's Department just like you said with American Canyon. Their paychecks are from the County, but the money comes from the City Of Dublin's budget.

My department (Contra Costa County Sheriffs Department) does the exact same thing in the cities of San Ramon, Danville, Lafayette, Orinda and Oakley.

8406. Pac Bell

8407. discriminator decoding problems

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-01-15 00:36:23 UTC
From: kma371
Topic: 8407 Message: 8407

First the background...

Radio: Uniden 780XLT with discriminator tap done to it
Decoder: Texas 2 Way 2 or 4 level FSK
Connectors: Radio Shack 1/8" plug to RCA phono plug
9 Pin DIN connector

I plugged the RCA phono plug into the back of the 780 where the connector is. The 1/8" plug goes into the Decoder. The DIN Connector goes from the decoder to the computer's COM port.

Now the problem...

I'm not able to decode anything. My guess is the data is not going from the radio to the computer. I know the COM Port works because I used it to program frequencies into the radio using WinScan.
Someone suggested the program SLICER, so I tried that. Still nothing. Then I jiggled the 1/8" plug that went to the Decoder and I saw some activity on SLICER. I don't think the 1/8" plug is the problem because I bought it brand new...it could be, but what do I know :)

So then I tried using my computers Sound Card, but I don't know how I'm supposed to hook up the scanner to the computer. My computer dosen't have an INPUT jack on the back of the computer. I have used WinScan in the past to record audio from the 780 onto the PC and it worked just fine.

PLEASE ANYONE HELP! :)

Thanks,
Bill KE6LES

No, not always. But most of the time.

13648 is Special Event 3. They use any of the three Special Event channels for ballgames at Pac*Bell Park.

The other two are:

13584 - SE1
13616 - SE2

Bundy

I was monitoring SFPD on Saturday and picked them up on 13648 at Pac
Bell. I noticed that they used this ID before for operations there.
This question is for Bundy or anyone else who knows for sure.Is this
the ID SFPD always uses for its operation at Pac Bell ?
thanks

Topic: 8410 Message: 8410

I was getting traffic (testing) on 36080 on ALCOs system this morning. Kelty list this as a Hayward Fire tac channel. So far, I have not heard HFD use anything on trunked for their Fire operations. they use 460.60 (yellow) , 154.07 (red) and the white channels at times. Does anybody know if Hayward is going to actually move to trunked ? I can NOT even confirm I was hearing Hayward this morning, just somebody testing on that ID.

Yes, Harry. That was from me.

Unless these are new "urban legends" (entirely possible), what are these cities afraid of? Geez...people have been listening to their routine stuff for 60-70 years or more. Why the sudden paranoia? Betcha the 2-way radio builders are primed and ready to play it up though...

No sudden paranoia. They just haven't had the ability to make us really go away before now. Now, they can. And it's no urban legend. I deal daily with the people in SF who make the decisions regarding SF's radio system and that's what they are planning. They especially don't want the narcotics and vice units overheard anymore. And of course Motorola is building it up. That's their bread and butter. They'd love everything encrypted, if cities could afford it.

8420. Re: [bayscan] discriminator decoding problems

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-01-15 16:23:50 UTC
From: robert sanford
Topic: 8407 Message: 8420

You might have to check your sound card settings to make sure that the
audio is making it into it.

You should hear that audio if it is coming from your computers speakers.
Same as you would if you were going to record something from your scanner
that was going into the sound cards input.

There should be a "line in" on the sound card where the audio is going into it.

Also check the settings for your sound card by clicking on the little
speaker icon located in your task bar and then make sure that the "line in"
does not have the "mute" box clicked.
You should be hearing the audio from the scanner coming out of your
speakers. If not then the output of the scanner is not making it into the
computers sound card correctly.

Hope that helps.

Robert

Topic: 8422 Message: 8422

Sorry for the late posting. Last night I monitored traffic on 154.9200 which I have tagged as CLEMARS. It seems someone was being escorted by fairfield around Airbase Parkway and Dover and others were around Solano Mall, in JC Pennys'. They were all communicating with a Command Post giving various Fairfield locations, seemingly searching for someone or something. Later in the evening the Command Post reported for all to discontinue the search and return to the post. Does anyone have any idea as to what/who I was monitoring? Many units identified as "H", such as H3 H6 etc. The search sounded pretty extensive until called off. I'm catching some very brief chatter tonight. Any ideas?

Very Respectfully,

Mark A. Lane, MSgt, USAF

Brian; Bob E. and I try to update this list weekly. This frequencies are "CONFIRMED". Most shopping centers have frequencies that are not licensed so listening is the only way to find them. This is a dynamic list because some malls have been known to change frequencies when this list is published.

If anyone would like to contribute, send your inputs to rheisner@... and we'll include them in the listing.

Go to http://www.saltydogradio.com/irs/IRS_Addendum_20020106.pdf

You will need the Adobe Acrobat reader for this file.

Sorry Bob, no reports have been received from Sacramento.

Regards

Ed

A detailed list of Mall frequencies which includes Valley Fair
and Stanford Shopping Center can be found at the following URL:

http://www.saltydogradio.com/irs/IRS_Addendum_20020106.pdf

The Pruneyard in Campbell and Westgate Mall in West San Jose
both use Nextel and can not be monitored with a scanner.

Interesting to hear they're 'frequency agile'. I'm
surprised they go to the effort of reprogramming the
radios. Have you seen folks with repeaters make a change?

Yes, and the pursuit in SF that went into Oakland and Richmond is another example of agencies unable to communicate with each other. We started having meetings yesterday at the PD firing range with the Governor's OES to hammer out a comprehensive mutual aid comm. plan between Oakland, Alco, Marin, SF and San Mateo. It would also involve the Coast Guard and the FBI. A tall order.

Well, we'll be able to patch SF to San Mateo's green channel in about a week or so, once we finished getting the Tband repeater back up on Twin. Then we need to get Marin licensed for green once they get their system up. It ain't gonna be anytime this year, though. Marin's having tremendous problems getting permission to put their new system in certain places.

Bundy

Marin is doing more than talking about it. They already have the equipment purchased and in storage. And San Mateo isn't far behind.

The solution that I'm working on right now is since San Mateo is keeping the green, we put the green in a repeater on Twin Peaks and then get Marin to put it in their conventional banks in their new system. Then SF can talk to both by having the dispatchers patch them together. All the functionality is already built into SF's dispatcher consoles.

Bundy

Well, that sounds pretty good. It almost blew my mind last night, hearing Palo Alto PD chasing the bad guys down Bay Road in EPA, saying switch to the Green, As soon as I switch the first thing I hear is "approaching Westlake." Now the only thing I know of that could get from EPA to Westlake in about 10 seconds is an F-16 and I don't thing the preps have one of those.

No, any of the "A" bank will also work. The dispatcher just drags and drops whichever channels they want patched into the patch window and activates the patch. It can be any channel from the SF bandplan. The other end will be green. This plan isn't totally set in stone as far as using green goes. They may opt to use the old SF Fire Control 5 tband channel. But green is what we're proposing, especially since all the San Mateo law units have it already.

Bundy

Not that I will need it, but what channel will patch to Green?
Once of the "C" channels?

8453. Regarding recording programs

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-01-18 00:28:51 UTC
From: Christopher Handisides
Topic: 8453 Message: 8453

Does anyone know of an audio recording program, along the lines of Scanrec, that will record each individual "hit" as a separate file? I'm in the process of mapping out the UC Santa Cruz TRS, and I've been leaving my BC245XLT running with ID Tracker logging the talkgroups while the scanner is in ID search mode. I would like some program with which I would be able to match the ID Tracker logs with the recordings, and thus be able to figure out who is who. If anyone knows of a freeware (or even a full-enough-featured demo) control program for the 245 that would do both at the same time, that would be perfect :)

Thanks,
--Chris

8456. fire west 2002

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-01-18 05:52:01 UTC
From: Pam & Jeff Schiller
Topic: 8456 Message: 8456

I just wanted to ask if anybody was interested in meeting at the fire west 2002? This year is going to be the biggest so far!! Anybody going? I though it would be nice to put a face to some of you, compare ugly ness and so on (lol)
anyway please post what day(s) you will be going and lets try to set a time to meet
does this sound good to anybody?? If not I am going to take as many pics as I can and post them in CENCALFIRE files so you will see what you missed

Jeffrey in Hollister

8457. Scanner News Stories Wanted

I would like to invite all of you to join my new Yahoo Scanner News Story Group.http://groups.yahoo.com/group/Scanner_News_Stories/

This group allows people from across the U.S. & Canada to post interesting news articles from Radio, Print, or TV Media that represent some part of the Scanner Hobby.

You will see what I mean by the first posting that was made.

I think this can be a very interesting group with the amount of activity that goes on throught both Countries.

Sorry for cross posting through many of the groups, but with a group like this, I wanted to try and reach out to as many people as possible that are interested in the scanner hobby.

So please don't flame any of the groups for this posting. Thanks for your understanding.

8460. New radio technology for Santa Clara County

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-01-18 15:51:42 UTC
From: johndrake66
Topic: 8460 Message: 8460

The Mercury News had an interesting article about some new communications technology being phased in to allow interagency communications in Santa Clara County. From what I can gather it looks like a unit that patches the repeater input from one agency to the output of another agency and vice-versa. This could make for some REALLY interesting and possibly very complex scanner listening.

Doesn't sound complex to me. I don't know how he did it, but years ago there was an SFPD dispatcher who would simulcast pursuits. If a Central Unit was calling the pursuit on lowband 3 , it would come out on 1.2 and 4
Again, don't know how he did it. I am talking 20 years ago. I doubt you would have to do anything. If the pursuit starts in San Jose for instance, goes up 101 into San Mateo County, they hook it into the Green and You could then hear the SJPD unit without changing FREQs and more important, the LE units in S. M. County could all hear him. This sounds like what Bundy has been talking about the last 2 weeks or so.

From: Bundy Chanock
Topic: 8460 Message: 8466

SFPD always had the functionality to simulcast low band stuff on PIC and visa versa.

What we're dealing with now is more complex, obviously. Now, take your scenario and have the pursuit going into SF. We need to allow that SJ unit to be able to talk on PDA2, for example. And the bigger problem is having SF units going south and losing the 800 system as they pursue deep into San Mateo Co.

Bundy

C4 works, but not well and certainly not along 280 south very well. One of the considerations would be to put up a conventional 800 repeater on King's Mtn. and another on San Bruno. We're testing an 800 trunked/Tband trunked setup right now.

Bundy

They are not using it at all. It didn't fly once last year. No funding. Very political. Doubtful whether it will fly this year either. But yes, they do use the ID of the area that they are over at the time. Plus, they have a nice little Saber in there with all ham freqs. in them. I loaded it up for them last summer. Dan is supposed to call me on it tonight, but he hasn't yet. If he does, he'll come up on Twin Peaks on 442.050. They just went to SFO to get gas. He probably forgot to take the Saber out of the SF copter and put it in the CHP one.

It's a 400 mhz system and the last time I went past
it didn't pick up a thing.

Any suggestions for settings would be appreciated.

Thanks

Kevin

8486. New radio technology for Santa Clara County

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-01-19 03:45:52 UTC
From: Brian Christensen
Topic: 8460 Message: 8486

Hi Gang,

A very good friend of mine works at County Comm. and when asked the question regarding the article in the SJ Mercury News today here's what he came back with.

Hi Brian,

I did see the article and hadn't heard anything about it. So I asked one of the big cheeses.

He had heard about it and agreed with my guess that there is more to it than meets the eye.

The theory of operation is that if a whole buncha units are at the scene of something, they can take ONE OF EACH of their portable radios and plug them into this "black box," and whenever something is said on one frequency, it's retransmitted on all the others.

Presumably each radio would be put on it's agency's tactical (simplex) frequency, rather than linking all departments' repeaters together, which would be disastrous.

(Which begs the question, if a whole buncha units are at the same place, why do they need radios? Why can't they just talk to each other?)

We had a device like this in amateur radio in the eighties and they called it a porta-peater ("portable repeater").

There is already equipment in place at four of our (County) radio sites that will do essentially the same thing as this black box will do, with considerably better coverage (from mountaintops).

And in the fire service, almost all local agencies already have all the frequencies of almost all of the other agencies in their mobile and portable radios, so this would not be needed.

This particular concept (in the article) is coming from the top down, not from the technical people up. So we'll see where it goes.

Thanks for asking. I'll watch for more details.

Brian

It's actually the same helo that crashed. Totally refurbished. Got the fancy high-intensity light underneath, nice tracking system with street maps that change as you fly over, looks just like Street Atlas USA, except that it also gives you airspeed and ETA to destination, once it's entered. Also has infa-red.

Bundy

Brian, was that either Frank or Nick? If so, tell them hi for me.

It actually is used on repeaters as well as simplex. For example, Coast Guard needs to talk to FBI. DEA needs to talk to CHP. The repeaters are not all turned on at once, since you're right...it would be disastrous. They are "patched" for the duration of the need, then unpatched. The radios are plugged in just long enough for the codeplugs to be read, and then they can be removed. Now the computer has the read on that radio. It's all done by computer and what you end up with is a screen with lots of icons in different groupings (or folders), that can be drag and dropped into the "patch" window, for communication linking.

Bundy

It is a digital system. Wait for the BC785 to hit the market.

A member of BayScan... Sometimes I get a bit busy and it takes me time to verify people before adding them to the list.
I want to avoid SPAMMERS at all costs so Im careful about adding people and like to check them out first.
The background check takes two weeks lol...

I was told the system uses both analog and digital.

I'm not familiar with how the Pro-93 programs but I'll offer that the
system uses multiple base freqs which I believe are only supported by
the BC780.

I have.

When I was at the last Travis Air Expo. I'd say
somewhere around 30% of the traffic was analog.

It was just enough not to bother trying to monitor. ;)

From: gary
Topic: 8485 Message: 8499

Perhaps the air expo is the exception to the rule because it is a special event. I monitored the system a bit from Diablo (which has a nice view of the airspace) and never heard any voice.

Did you ever get the trunk tracker to follow the system?

As an aside, the distance from Mt. Diablo to Travis is the same as the distance from the nearest observation point (Tikaboo Peak) to Area 51. Since Travis has big cargo planes, you can watch them land from Diablo with just a pair of binoculars. [The approach paths are much closer, around 10 miles from Diablo I'd estimate.] You can do the same observations at Groom Lake with the 737 "Janet" planes, but the fighter aircraft on the ground are much harder to identify with binoculars.

Groom Lake has a trunked system. I've monitored the system and it is mostly digital, but every once in a while you hear a voice page. Perhaps the military has some mixed mode system that does paging and two-way radio traffic.

8500. Re: [bayscan] State Parks Frequencies

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-01-19 21:10:43 UTC
From: Jim Gammon
Topic: 8140 Message: 8500

The link below is great but some of the information is out of date. For example, on the Contra Costa County link, it still lists El Cerrito PD as being on 460.375. It is not. It is talkgroup 289 on the Richmond PD trunked system. The link also lists ECPD as being talkgroup 3 which is incorrect but may have been three for a while.
Also a question about the state park 800 frequencies. Has any one heard much traffic up there? I've only heard Mount Diablo. Thanks for any info.

SJ fire uses a non-trunking system along with San Mateo Sherrif Dept
they also use non-trunking systems...

The comment made, if your referring to mine was that You can't get San Francisco or Oakland (except SFPD on lowband) . Nothing in Santa Clara County (except Santa Clara City) or San Mateo County is trunked (yet)

OK, If you really like Uniden & I agree they are real good scanners, it depends on your price range. For Handheld, I doubt you can beat the BC245xlt, on line you can get it for under 200. For base/mobile, the BC780xlt is the standard, it is excellent, I own two. They run about 350.00 and you can get software for them, it is much easier to program that way. There is the BC895xlt , but you can't monitor trunked and conventional at the same time. Were you the one living on T.I.? you have a great location to monitor with. Any of the above will get you SFPD, SFFD and Oakland. Plus a whole lot more. Now, the Uniden BC250d and BC785D are coming out late this year, both can get digital. Some of SFPD stuff is digital, BUT there are reliable sources who say SFPD will encrypt those frequencys, so a digital scanner won't do you much good. I would really suggest the 245 and/or the 780.
Ed

Well, I can tell you what ham channels I talk on and what some of them are that I have programmed in my ham radio, if that helps.

ACS Twin Peaks 442.050 (127.3)

Pacifica 442.475 (114.8)

W6TP 443.100 (CSQ)

W6TP 146.790 (CSQ)

Carla 2 442.075 (100.0)

Rocky 443.425 (100.0)

Diablo 441.325 (100.0)

Diablo 147.060 (CSQ)

W6PW 145.150 (CSQ)

145.290 K7IJ (Berkeley) (CSQ)

W6TR 147.105 (CSQ)

Bundy

I'd suggest waiting for the new 250 and 785D. At the very least, you will get more memory in them. They do not come equipped to decode astro, but can accept a card to do so. The price will be very similar to the obsolete models (245 and 780).

Hi Gang,

I have heard from a few reliable sources that the M.E.R.G.E. units
(and maybe others?) are using a trunked system within San Jose P.D.

If true, does anyone have freq's, type of system, etc...?

Any comments?

Thanks,
Brian

They're on an LTR system (or a couple of them), but I've forgotten most of the details. There was some traffic that was being monitored a while back that was thought to be bounty hunters, and then it turned out to be them. As far as I know, it was only MERGE units. Search the list archives. I know the stuff was posted on here at some point. I let most of it slip since I don't have an LTR-capable scanner to monitor it with.

A good tip when you have a lot of ids to lock out that are digital,
set the system as User. then the block as S-11 so that when you lock
out the type I id, it will lock out a large block of type II ids. If
there are more digital block in sequential order you can using a
larger sizecode (Ones that take up two or more blocks) to lock even
more groups of ids out with one locked out type I id.

I know it seems weird but it works. The default setup for mixed mode
systems is to define blocks as analog or digital within the ranges
used by type I so simply setting the block as a large sizecode will
ignore many of the bits.

Claude, what were some of the ids that were analog?

Wayne

I went near Travis this morning and as expected, no sound but I was able
to
store several (7) talkgroup numbers. I saw a couple of them repeat.
Was I picking up talkgroups or just spurious garbage (noise)?
Is this typical of a digital system?

It may be typical of your scanner IF all the information isn't entered correctly. You didn't say what scanner you are using. My understanding is the BC780 is much smarter than the BC245 on moto, but travis is edacs, and I don't know if a 780 does a better job on that kind of trunk system.

Incidentally, the 250 is supposed to have the ability to simply follow the data channel like the 780 does, rather than be required to have all the trunk freqs plugged in like the 245 requires for moto. That is why today I would hold off buying a 245 and wait for the 250. The differences between the 785D and the 780 are not as great, but still wouldn't buy a 780 unless it was heavily discounted.

I've checked these out as conventional freq and
not heard anything. They are associated with
transit, i.e. bus, lite rail service.

If anyone know additional on these, please post.

Thanks
Kevin

The astro system here at Travis is digital. It is my understanding that these radios can be set to find local repeaters. When we were at Camp Parks for an exercise, that's the mode we used. All the radios have an encryption mode and I believe most use this. I think during the expo there were a lot of inexperienced users out there that didn't understand the many modes in which this radio will run. I still haven't figured out all the different modes myself :) When the new digital scanner comes out it should be able to monitor traffic here but, be advised, most users transmit in the encrypted mode.

Very Respectfully,

Mark A. Lane, MSgt, USAF

Thanks for the information.

Any idea why Travis decided to go with encryption?

Are they having any problems folks associate with
digital transmission?

Well 2 out of 7 ain't bad. UCDMC is not a radio code
and there for is NOT part of the contest.

And we wonder why clear-text is better......

Hint, Ambulances do NOT detain people. (well not in
theory anyway)

Travis is a Motorola system utilizing two base freqs. As far as I
know, the 780 is the only current scanner which will accurately track
it.

>Incidentally, the 250 is supposed to have the ability to simply follow the
>data channel like the 780 does, rather than be required to have all the

>it was heavily discounted.

The only difference between the 250 and 245 is the 250 will have the
option for up to three ranges for VHF and UHF trunked Motorola
systems, just like the 780. The 245 only allows for one range making
systems like Travis impossible to track correctly.

8542. Garmin Introduces GPS-Integrated FRS/GMRS Handheld Radios

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-01-21 07:22:09 UTC
From: Mobile11@aol.com
Topic: 8542 Message: 8542

Garmin International has introduced the Rino 110 and Rino 120 GPS-enabled handheld radios for the Family Radio Service (FRS) and General Mobile Radio Service (GMRS). "Peer-to-Peer Positioning" provides the ability to send an exact position from one radio to another, displaying distance and bearing. The Rino 110 offers standard FRS features such as 14 channels, 38 squelch codes, and VOX. It incorporates a 12-channel GPS receiver for position accuracy of less than 10 feet. Navigation features include extensive waypoint storage, TracBack technology, multiple position formats (including MGRS and Loran TD, and a built-in trip computer. The Rino 120 adds a basemap of North and South America that includes major cities, highways, thoroughfares, rivers, lakes, coastlines, state and national borders, and railways. Its 8-MB memory allows downloadable cartography from MapSource CD-ROMs, providing topographic, bathymetric, and street-level map information. It also includes a voice scrambler and a vibration mode for "silent" calls. Other features may be seen on the Garmin Web site at http://www.garmin.com/products/rino/. We encourage Garmin to consider developing a similar 2-m/70-cm radio for the amateur/RACES market.

Thanks for the information...
So can you (or someone else familiar) with the Travis
radios talk about how encryption or digital modulation
is 'activated'?

I'd assume that digital modulation isn't a user
selectable option. The radio tech would configure this
property per-ID.

How about encryption? Do users enable/disable this
per ID? Can IDs be setup as encrypted only?

It is a bit premature to say what will be in the 250, but it will have the ability to decode astro, which the 245 won't. Uniden didn't even have a vaporware model to show at CES of the 250, just the 785.

Do you have the proper freqs and offset for Travis? Would it be possible to scan half the system at a time with a 245?

Maybe, 2S70 is a Sheriffs Sgt., maybe on the coast, or in Portola Valley. Another thing, San Mateo County has problems with S/O 1 from time to time, when it isn't functioning right, they switch all S/O units to the green, they may have been what you heard. I don't know how much you know about the green, but for the record, all law enforcement agencies in San Mateo County plus Palo Alto Police have it. They use it most often for pursuits and for code 666s which is a countywide roadblock, a net if you will, to capture perps from a just occurred felony. You can usually tell they are doing when if your driving up or down 101 or 280 and see police cars at most off/on ramps.

Not really. It's like listening to a Type IIi system
with the wrong fleetmap.

You won't necessarily hear both sides of a conversation
if the response comes back on the 'half' you're not
listening to.

I know this because I spent most of my time at the last
Airfest getting carpal tunnel changing the Base/Offset
to try and monitor the system. I need to go back
to my notes, but I remember that there were a couple
of b/o that gave 'partial' results and this is the
explanation. I didn't know about the multiple b/o.

So does anyone know what these are? And care to
share? ;)

8559. 800MHz antenna options

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-01-22 03:17:56 UTC
From: Jordan Hayes
Topic: 8559 Message: 8559

I live in West Berkeley and have an awful time receiving ALCO, Oakland, and Richmond. On the other hand, I do very well with the UC Berkeley system and pretty well with SF. I have a wideband antenna "in the attic" for my 780xlt and a pretty nice Austin-Condor for my handheld 235xlt, but neither can do Richmond, for instance. The handheld is actually better for ALCO, though still not that great.

Does anyone here have experience with something like this?

http://www.grove-ent.com/ANT22.html

Other than looking REALLY KOOKY, does it work? Think it would help? Any other ideas?

Thanks,

/jordan

From: gary
Topic: 8559 Message: 8560

I prefer a Diamond Rh77 for handheld use on 800Mhz. I have what I believe is the Austin-Condor (long lost the actual package). Is that the antenna that looks like it is helically wound and very flexible for most of the way, then the last 3 inches are stiff, where I think there is a ferrite element. If that is the beast, then that antenna seems to be only good up to VHF airband and more or less milair, but not very good at 800Mhz. It is better than most antennas on lowband, which is why I have one.

That little antenna that Grove sells is a 1/4 wave vertical cut for 800Mhz, which in theory should be good. However, the problem with antennas is that you need a certain amount of aperture (like a lens) to get the signal. In other words, you need to throw some metal out there to get the signal, so being tuned may not be better than just having a lot of signal capturing metal in the RF field.

You could build a version of that Grove antenna using 50 ohm coax. Typically the center conductor (i.e. shield removed) is used as the vertical. Solder some radials at the shield. I could compute the size if you are inclined to build one. Take the money you save and buy some Kelty guides.

Hi Jordan. I live in El Cerrito and work at U C Berkeley. I have no problems hearing the Richmond trunked system on the south side of campus inside with my BC245. Sorry, but I can't remember the type of handheld antenna I am using. It was designed for the 800 MHZ band and I think I got it from a company called MetroWest, (800) 657-1475. They also carry higher powered battery replacements then the stock scanner packs. Jim

Topic: 8559 Message: 8562

I get the Ricmond system, Oakland and ever San Francisco fine here in
Sausalito just using the stock antenna stuck into the back of my PRO-2067.

However I have some pretty good elevation here (Im about 1,000 feet above
sea level I think) and I also didn't get the Richmond or the San Francisco
systems until I moved just across the hallway to the other side of my building.

I think that the building was blocking the SF and Richmond systems and no
matter what antenna I tried (and I tried plenty of them) I couldn't receive
SF particularly.

800 Mhz is a funky band which is demonstrated by just my little move across
the hallway making all the difference in the world.

There are a few different ways. You can allow the user to select the mode via the concentric switch which is around and below the channel selector on a portable, or a button on a mobile. You should see both an 'O' for clear and a 'Ø' for secure.

The other option is to 'strap' the mode as secure. This is done when programming the radio. Whenever the radio is on that mode it will transmit secure. The user has no way to change it.

Whenever a key is loaded into a radio the radio will always decode the message regardless of where the concentric switch is located. All the switch does is define transmit. A key must be loaded to encrypt or decrypt any conversation. Some radios allow for the storage of multiple keys within the radio and for the user to select which key to use. A specific key can be included when strapping a mode also.

The original post was reception from West Berkeley. That is out in the flats as they say. I've run a BC245 from the parking lot near 4th street Peets and the Oakland reception was not happening. However, you can walk in Tilden Park and get Oakland just fine.

If the signal is not there, a better antenna won't help. If the signal is there but of poor quality, then the better antenna may make a difference.

8568. Chat

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-01-23 13:48:25 UTC
From: rjhill3@cs.com
Topic: 8568 Message: 8568

Hi,

Many of the chat groups work, but are very underutilized. Sadly, people have enough time to post a lot of uselesss and redundant information, but not enough time to chat. I would rather chat with you and others on occaision than post of a lot of stuff to a list that most people are uninterested in.

It's not just this list, but using this as an example: this list has several hundred or more members and it's the same 25 or so that are always posting. Which may mean that the others have nothing to post, unfortunately, alot of what the regulars post is just kind of filling space. It's used as a personal list, which is unfair and unfortunate for the rest of us.

I know on the Trunk Star 780 list it is set up to have a chat every Tuesday. I think the moderator has to set that up, it can be added to the calendar and then everyone gets reminded of the chat. It could even be set up for several times a week. I'd like to participate in that. Maybe it would cut down on the hit and run posts.

I've been trying to pin down the Rx tone or tones for CDF, be it local net, command, tac, etc. I've looked at quite a bit of info on the net but I'm only looking for the receive side. Is the same tone for Tx used for Rx?

Also, what are the four "Orange" frequencies used for?

Thanks,

Wayne

As far as I know, CDF doesn't use tones on the repeater outputs, but only on the inputs, as a repeater-selection method.

CDF has gone to a system of output tones ontheir
repeaters. It follows the Unit Number.
eg. 2300 NEU uses tone 3 4400 TCU uses tone 4

These are the standard 14 PL tones used by the Forest
Agencies.

the tac freqs are untoned

the command frequencies from 3-10 use a tone of 131.8
for all of them. Command 1 and 2 are untoned.

I have no clue what "Orange" is post the frequencies
and I'll see what they are.

They were taken from the CDF Jpeg in the Files area. I haven't
monitored them yet. I'm trying to build a radio plan to program that
will handle CDF ops any where I am in California. Something I can
leave and not have to reprogram because it will be in a Motorola
radio. I've basically used the 154 radio plan but was looking at other
CDF lists.

Ok, well that will get you the most bang for your
buck. If you want LG Fire then program 153.770 thru
154.445 in 15 khz steps. That will get you most all
the VHF stuff, except a few oddballs. (My most warmest
regards to my friends in Conta Costa County)

I have two files in the BayScan files area that are basically scanned pages
that I got from a Fire Captain of the exact frequency layout for the CDF
frequencies for California.

Take a look at:

http://groups.yahoo.com/group/bayscan/files/

At 11:08 PM 1/23/02 -0800, you wrote:

He called a MCI (multi-casualty incident) this requires polling of the hospitals among other things for incidents with multiple patients. He was doing it as a precaution but cancelled it as well as the 1st alarm. As usual, 911 calls were stating the incident was much worse than it actually was. Still, the BC did the right thing, getting many units rolling until E6 confirmed it was a minor incident. E6 is already back in service

Hey whats LG stand for? And FYI Plumas county has gone to a somewhat repeater system up here on 155.085 for their fire net...Was on 154.19 but had too much interference from Sacramento...

Don Root - Can you confirm Plumas county info for me? Thanks,

Later,
Todd

Local Government, as in a set of frequencies (back when the Commish had separate services within the Public Safety allocations) used for Police, Fire, Public Works, Emergency Management, EMS, etc. The beauty of the LG radio service was the street sweepers could use the channel during the day, and the cops could use the channel at night when the PubWorks guys were off duty.

I'll check around on the Plumas stuff, but my crystal ball is still packed from the office move.

Don

Your office faces Sproul Plaza if I remember correctly. I'll be there.

Generally I just plug in every USSS freq. I'll do a list this weekend and post it. I guess it should include the UCB trunk system, Berkeley PD, USSS, and maybe CHP.

For those who can't attend, there is the Sproul Plaza Cam: http://www.berkeley.edu/webcams/sproul.html

The staff in Boxer's office has virtually no details, as it turns out they are prohibited from raising campaign money. Glad someone gave you the heads-up.

8602. BC780XLT PC program

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-01-25 04:02:55 UTC
From: John Smith
Topic: 8602 Message: 8602

Since the BC780XLT seems to be a popular scanner on here, and many of you demonstrably have more time than I do, can someone who has tried a few of the PC programs which can be used to tame the 780 compare the programs and tell me which they prefer? A quick scan of the web reveals at least 6 programs, many free, but it's difficult to determine which have the best features.

Thanks!

Got it. I went through and figured out the tones for all the local
nets and put a list of regions and units together at the same time.

Btw, Bill, does CCCSO use 136.5 as the standard tone for all SO freqs
or just the TACs and Dispatches?

Wayne

an East Palo Alto Officer in foot pursuit was fired upon about 10 minutes ago. Palo Alto,Menlo Park and the S/O has numerous units enroute code 3 , setting up perimeter. Black Male,beanie,hooded sweatshirt , jeans. about 5- 10 husky,180 , neg. facial hair, white tennis shoes. fired one round at officer, missed. Sheriffs Office and Palo Alto each have K9 enroute for search. EPA believes they have the perimeter set and the perp is within it. Area is called the Village , around Gonzaga, Michigan, Fordham , Illnois. East of Bay road and south of University avenue. At this time they are using EPA primary 488.3875

Burlingame Fire and County Hazmat teams working a full hazmat
incident at 1155 California at Carmelita. unknown type, started
around 1030hrs. the IC(Battalion 8) just requested fire support with
refreshments for 2 Engines, 1 Truck , the Hazmat team and numerous
Police officers. sounds like an extended operation.

As of 1420 hours, HazMat feels the substance is Dr. Pepper. They are taking samples to send to the lab. Evacuation order should be lifted by now (1500 hours).

I already heard all the jokes, am drinking a DP right now. It's been one of "those" days.

Hi Garry. Sorry, I forget if you are a ham or not. Anyway, my office actually faces south toward Bancroft. The building between our place and Bancroft Ave. is the ASUC building. I am in the Disabled Students' Office, room 260 if you want to come by and say hello in person. I have some VHF secret service frequ's and of course the UC trunked system. It's hard to predict how much protection the former POTUS will get or if they will use incripted stuff. Should be interesting.
If you are a ham, let me know and I will monitor 146.52. Tnx, Jim

ABZCZC-CIV-CEM-2060130045-252216-

This is a message from Contra Costa Health Services. There is an emergency
at UDS Golden Eagle Refinery. Residents in Clyde and North Concord are
advised to shelter in place. Go inside, close all windows and doors, turn
off all heaters, air conditioners and fans. If not using the fireplace,
close fireplace dampers and vents and cover cracks around doors and windows
with tape or damp towels. Media news networks will continue to carry updated
emergency information. Stay off the telephone unless you have a life
threatening emergency

Topic: 8611 Message: 8617

Dublin, like most cities in Alameda County shares the ALCO 800 MHz trunking system. Both their police and fire departments are contracted through the county. ALCO's system uses two types of repeaters, both wide and local. Dublin is on the wide channels, so you'll only need to program in the frequencies listed below:

866.4250
866.9375
866.8000
867.4000
867.9250
868.0875 (control)
868.7625 (control)

The following is a list of pertinent trunking IDs for Dublin:

16048 Sheriff East
16240 Sheriff East (service)
16176 Sheriff Tac-8
18224 Fire East (dispatch)
17648 Fire Tac-2
17680 Fire Tac-3
17712 Fire Tac-4
17744 Fire Tac-5
17776 Fire Tac-6
17808 Fire Tac-7
21392 AMR Dispatch (south/east couty)

The Dublin PD units are the 7 and 8 series, example... 3adam71. The 52 series units are the Sheriff's patrol units for east county. Dublin also shares the East channels with the A/C Transit and Peralta College units, and Camp Parks Police. AMR units are usually 595-597 for the Dublin-Pleasanton-Livermore area.

Hope this helps!

-Mike

8621. AMR Pagers?

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-01-27 09:13:49 UTC
From: kma371
Topic: 8621 Message: 8621

I often hear the AMR dispatcher on 935.6875 here in Contra Costa County say he/she will send the call to the units pager. Anyone know what the frequency might be? Also wondering if anyone has the frequency for their AVL (Automatic Vehicle Locator) data (I have 47.500) and if anyone has ever monitored it to know what kind of data it is, sounds just like amateur packet to me.

Thanks
Bill

From: Eddie Ragasa
Topic: 8621 Message: 8624

When they send the call information to the pager they are using normal alphanumeric pagers. The frequency of the pager depends on the paging company they are using. If you monitor that frequency of the pager you won't hear anything but paging tones. As far as the AVL is concerned, that frequency is right. What it does is from the communication center a data packet is sent to the unit and then the data packet returns back to the communication center telling them the information of where the unit is and the status of the unit. It something not worth listening to because all you will hear is a data packet being sent over the air.

Our medics here in CenCal have regular alpha pagers for the same
reason, to get the addresses for low-priority calls, plus any
diversions for the local hospitals.

I've just heard several FD units dispatched to the North Field of SFO for a HazMat situation. The units were instructed to switch to C9 after passing San Bruno mountain. I'm not finding a C-9 talkgroup in Kelty's TRSCalifornia book. Would someone forward me that informaiton? Thanks.

Thanks George, I found it. I was looking for a talkgroup but it's actually a completely different trunked system. You have the right frequency for C-9.

I think it's trunked. It's in my TRS book, but it says conventional . . . Not getting anything, but I'm not using that Tone doohickey yet.

> When they send the call information to the pager they are using normal alphanumeric pagers. The frequency of the pager depends on the paging company they are using. If you monitor that frequency of the pager you won't hear anything but paging tones. As far as the AVL is concerned, that frequency is right. What it does is from the communication center a data packet is sent to the unit and then the data packet returns back to the communication center telling them the information of where the unit is and the status of the unit. Its something not worth listening to because all you will hear is a data packet being sent over the air.

Ok let me try this, Do city like S.F. and AlCo. have mobile repeaters that can work without power from PG&E?????Like what would L.A. do and they have one of the biggest trunking system, I would think that the C.P's would have back-up power but if you lose one or more of the repeaters you would have a big hole in coverage.

If you are talking about the paging system, it all depends on what paging company they are using. Freqs are different for every paging company out there. If you are talking about the AVL, I wish I could help you there. I have no idea what AVL system or company they are using. The current AVL system as been in service ever since the Regional Ambulance days. Before AMR bought them out.

I don't think ALCO has a 'portable repeater' they use. If that system goes down, it goes into "FAILSOFT" mode, which is just simplex. Each major talkgroup (Police, Fire, EMS only) has a specific frequency (only frequencies the trunked system works on) that they go to if the system goes down. And they talk on the output of the repeater. I know thats how Alameda Co's system works, but theirs is Motorola, who knows what GE systems do.

>Just wanted to know?

Typically a generator. If no generator then there are backup
batteries, a LOT of them.

The PCS company I work for uses on-site generators when it is allowed,
otherwise each cell site has backup batteries. Sometimes only 4 and
sometimes 16. The equipment has the ability to sense the loss of power
and switch over. When all else fails we drag a generator out there.

And I think the State maintains the 800 M/A channels FWIW.

Jeff,

155.340 is one of the VHF HEAR (Hospital Emergency Ambulance Radio) frequencies. It is used here in Sacramento for Lifeflight Out of UCD Davis Medical Center. It is also used by other Helos to contact UCD when they are enroute there. The "800" you are referring to is probably their Med Net system on the Trunking System. We have one hear to, which replaced the old 463-468 Med Net system in Sacramento.

I don't know why they are calling "OES Sacramento" as we don't have that frequency in any of our radios.

"FAILSOFT" is if the Trunking system crashes, (the
computer takes a dump. Although a power failure at the
controller would cause the radios to go into
"FAILSOFT" (as this would appear to be a computer
crash). This would not necessarily be true of a single
repeater site losing power.

Yeap! Still going strong. Now that's what I call continuous duty. You
figure if they removed or powered down the voice channels, why not
just shut the controller down also...

The story I recall is that the city of Valejo got the land (Mare Island), but the feds forgot to steal back the repeater site before the handover. So the city of Vallejo also got a prime repeater site, but does nothing with it, including not pulling the plug. My guess is the Navy still pays the power bill.

A certain person on this list could tell a good story about the Mare Island Diablo site, a Russian spy, a P3 and the CHP......

Mill Valley, Tiburon and Sausalito all share the same frequency of 39.880

They also use the Sheriff's "control 2" frequency of 39.520 to speak to the Sheriff or when on the scene of a multi agency job.

Channel 4 as it is refered to on the radio 39.560 is used for "car to car" traffic by the Sausalito, Mill Valley and Tiburon officers.

46.500-Fire Dispatch
37.100-Country Dispatch

I have never heard any 155.055 use in the area in the 4 years I have lived here.

Yes, SF does.

Bundy

Ok let me try this, Do city like S.F. and AlCo. have mobile repeaters that
can work without power from PG&E?????Like what would L.A. do and they have
one of the biggest trunking system, I would think that the C.P's would have
back-up power but if you lose one or more of the repeaters you would have a
big hole in coverage.
Just wanted to know?

866.9125 is a northern california fire/ems mutual aid channel for
users of 800 systems. on the alameda county trunked system its
C13 (LL FIRE) and it is conventional.

From: Bundy Chanock
Topic: 8639 Message: 8659

In SF, we do a roll call of all hospitals in the CCSF on the HEARnet which is 155.34 most mornings, unless Fire Dispatch forgets to do it. I answer for OES.

Then they switch to 800 MHz, which is EMS-1/B13 (encrypted) and we do it there. Unfortunately, you cannot hear it unless you have a radio keyloaded with it.

I'm not sure about your area, but that's how it's done here.

Bundy

I often hear the roll call on saturday mornings on 155.340 and have heard in the past other traffic,Calstar, lifeflight,OES SACROMENTO so on..... Today at the end of roll call of hospitals the dispatcher stated he was going to do roll again on the "800 freq." Anybody have an idea what "800" freq. they use? I know they have the trunk system maybe but he cant talk to Sacromento OES on that right....?

BTW, there will be an execution tonight.
http://www.marinij.com/news/stories/index1002204.html
I expect the turn out to be very low given the nasty weather. You need to walk in about a third of a mile from the road, and with a good turn out park about half a mile away.

I have some photos here from the previous SQ execution:

Palo Alto Police reporting that it is snowing presently up on Page Mill road near Skyline and conditions are getting worse. I could see it up in that way from Cupertino this morning.
In another subject

I could pick up S.F.s system from Sunnyvale on my pro 93 this morning, a bit broken , but could understand the transmissions. Could get Oakland as well. Not sure how much the weather had to do with it, but I could get SF from EPA the other day too.This time I monitored a 2 alarm fire in the Tenderloin and could get it CLEARLY. I could not do this with my 245 or 780. I did have an aftermarket 800mhz antenna, but it was still a rubbie duckie.

Looks like the appeal has been denied: http://www.sfgate.com/news/ The article gives some of the background regarding his sentencing and the nature of the appeal.

We are getting a bit off topic here, but the point was he is not "our friend." If you look at my web page, you will see I am on your side: www.lazygranch.com/death_penalty.htm

Interestingly enough, there are no pro-death-penalty supporters at these events. Just lots of media and a few hundred protestors.

That's because the pro-death-penalty people have lives and jobs to go
to in the morning.

Of course, SQ is in the Bay Area, right in the middle of all of the
whackos. If they move Death Row to Corcoran, as it has been planned,
you'll have considerably more pro-DP people, and considerably less of
the anti-DP people there.

8677. Oakland EDACS help!

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-01-29 02:37:34 UTC
From: mikesrvca
Topic: 8677 Message: 8677

Hello everyone...

I enjoy listening to Oakland's EDACS system 'cuz there's some rather exciting stuff going on most of the time. I'm having some trouble understanding how they seperate their channels. I often hear the dispatchers make reference to "splitting the patch," and I'll notice in the morning hours that they use about one or two of their talkgroups. During busy hours, they use Patrol 1, 2, and 3, along with their 00-001 and 00-002 IDs. In the Kelty book it lists the 00-001 and 00-002 IDs and Oakland PD Main, but sometimes I'll hear no traffic on these, but rather on the Patrol 1-3 channels. One day, I heard no traffic on any of their patrol IDs, so I plugged into their control channel and found them using 02-011, which I don't see listed anywhere. Can someone explain to me how this patching works? and also if they've discovered what 02-011 is?

-Mike

Mike, While this is a guess, I have heard the same thing. I "think" that at times they may have split up the patrol area 4 ways instead of 3 .
02-011 is the new patrol channel....again, its a guess

FWIW, patch ids aren't assigned specifically. Once a patch is
initiated it could appear anywhere, though I think there is some
global rule. A patch between two groups can be on one id and a week
later the same patched groups could appear on another id. The problem
comes from current trunktrackers not understanding the background data
for patch announcements.

Wayne

Well advertising makes the world go round and the reason that yahoogroups
if free is because of the advertising in the bottom of the messages.

Personally it does not bother me since I never scroll down that far.

Now true "pop up" ads do bother me which is why I run a cool program named
Pop Up Killer.
Great free program. Not only does it kill any pop up ads but it plays a
cool sound of a gun shooting when it does.

If you want to download it go to:

http://www.popup-killer.com/

Try Pop Up Stopper from http:\\www.panicware.com which is freeware. If
you need to open a legitimate pop-up windows just hold down the shift
key.

I'm partial to Pow! from http://www.analogx.com as well as their other programs. The guy writes tight little programs (as opposed to the usual M$ bloatware) that kick ass. You have to train the program as to which windows to kill, but it's easy enough to do, and if you don't visit too many porn sites [;@)] you won't have to do it too often.

The state did their usual show of force at the execution. I'd say about 30 CHP (motorcycle and car) and 4 to 5 San Rafael PD units. I noticed that the motorcycle cops have a very cool looking electronic display on the bikes. I couldn't tell if it is just gages for the bike or had radio/mdt functions. Temperature wise, about 38 degrees but no wind. NBC3 was present, along with an unmarked TV ENG van. A nice touch was a small band (2 guitars, banjo,harmonica, drums,vocals) to entertain those leaving the protest. The crowd was the usual collection of priests with crosses, many Buddhists in silent meditation, ACLU members, press and amateur photographers and videographers, and a few reporters taping interviews. Prison personnel hang out by their gates and do observation from a spot on a hill near a large water tank.

The San Raphael PD was very vigilant. One car illegal parked had 5 to 6 tickets on it by 11PM and probably more by the end of the event.

Scanning. Yeah, if the 245 took alkalines, I would have done some scanning.

Topic: 8684 Message: 8695

Gary (and others) someone posted numerous FREQ for the Cal. Prison system on www.trunkedradio.com He didn't list the Ids but did do the fleetmaps, although I recall Gary, I believe you know the IDs for SQ ?
Also, I am sure everyone knows about the problems of the pro 93. Still, I have one and am REAL happy with it. I simply use banks 8and 9 for trunked and that takes care of the infamous text-tag problem (if your not aware, join yahoogroups/pro93 , plenty on info there) . The 93 uses AA batteries, one of the reasons I wanted it. Note, I can get San Francisco from the peninsula, as far south as Sunnyvale. Not real great, but good enough I can understand it. Neither my 245 or 780 could do that.
Going to go and program Caltrans now, want to hear about them scrambling to salt roads and run snow plows LOL
Ed

When I first got my 245, I spent some time trying to figure out the TG for SQ. The problem is you really don't know the internal ops, so there is lots of guessing involved. I posted to this list a few TGs like fire, medical, and various flavors of guards. If there is an archive, the information should be there, but it is far from complete. I don't live near SQ, and you really have to be able to monitor a site over a long time to get the TGs.

The most active times are during meals, which are done in shifts. The prisoners are moved from spot to spot, and counted at each handoff. Occasionally all hell breaks lose in the mess hall, but generally monitoring SQ is pretty boring. They announce the "body count" once in a while.

I monitored the SQ frequencies and there was VERY LITTLE traffic on it.
The only thing they mentioned was that the group of protesters swelled from
250 to about 450 when another 200 protestors arrived.

I have it recorded with scannner recorder but its not even worth posting on
my site.
Pretty uneventful scanning.

At 08:23 AM 1/29/02 -0800, you wrote:

I posted in for those who may be interested. But I would agree, I doubt it would be real interesting. Unless you live near a prison and something big happens, then it would be nice to have them available. I keep FREQ handy for the refineries up around Martinez, Crockett etc. Although I don't live near them (and have no desire to do so) but they would be interesting when they have a release.

Too bad you can't talk about scanning on a list with
scan as part of its name?

Maybe you can watch 'The View' tomorrow and write up a
report on that too?

p.s. I find that a 12V auto adapter works very well
when you don't remember to charge your batteries.

...so I know this question is a bit like asking folks
what their favorite food is, but....

What should I program into my BC780 during an upcoming
trip. I'll be going from my home in the south bay,
up to SF and then over to Richmond. I'm starting my
programming profile, and was looking for ideas.

Here's what I'm thinking so far:
SF Trunked System
Oakland Trunked System
Alco Trunked System
BART Trunked System
Richmond Trunked System (monitorable by 780?)
Golden Gate Recreational Facility
Oakland Airport
San Francisco Airport

...any comments on monitoring the local refineries?

You won't get much from GGNRA, I would add Contra Costa, if you don't have a bank for it, I would suggest setting on up. Yeah, just in case something happens at the refineries, you might want to do it also. Not a lot at either Airport. As far as FD/PD for the airports, I just put them in with their respective areas (although I have SFO/Fire/Crash and Police in with my San Mateo bank as well as SF. Happy scanning

Yes Richmond can be monitored with the 780, it is an EDACS system like the city of Oakland and BART. If you do not have them here are the frequencies for Cheron's Richmond Refinery, they use a 6 channel Motorola system:
856.3375
857.3375
858.3375
859.3375
860.3375
857.3625
Good scanning.

8711. 800 Mhz antennas hanging from Lightpoles

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-01-30 01:37:16 UTC
From: Mobile11@aol.com
Topic: 8711 Message: 8711

Ok, got a question. Around San Francisco I've noticed 800 or 900 Mhz antennas hanging from Light Poles. They also have what looks to be a plastic control box with it also. I was figuring it was something to control the lights but, they already have light sensors on them (which you can turn off with a high intensity spotlight ..he he) Could they be for the City's 800 System ? Mabey they are a B/U for the sensors...

Thanks

I have attachments turned off in Internet Explorer 5, so I don't see an advert, just HTML code at the bottom of the message (which I don't page down to). No problem here.

I do also have a program called AdSubtract which prevents website advertising popups from popping up. It also makes a popping noise when it encounters one. It also informs you, if you check it, how many ads it has blocked for you that session. Surprising sometimes.

scanning.

Oh! The 245 doesn't take alkalines? Hmm. Well, thanks for your message
about that. So, you weren't able to do any scanning then. I see.

The most dishonorable President in this country's history, the impeached Clinton, was in the Bay Area today. (If only there had been some way to combine last night's execution with his visit.) I have an actual job, so I wasn't able to go and jeer at the clown, describe equipment, people and weather, parking enforcement. I didn't do any scanning either, because my scanner was at home, you see, and I was not there. The 780XLT power cord does not reach that far.

8716. Re: [bayscan] 400 MHz vs 800 MHz trunking???

Yahoo group: bayscan (2002-01 — 2002-06)

From: Bundy Chanock
Topic: 8710 Message: 8716

Well, it's still pretty line-of-sight with 400MHz trunking also. San Mateo Co. for example, will have 7 sites (Ben Lomond, Half Moon Bay, La Honda, San Carlos, Redwood City and San Mateo), that are already locked in, with one more to be worked out. The stuff that I've heard is a little further range than what I'm used to in San Francisco, but a lot of that is the difference in terrain.

Bundy

We're all aware of the coverage issues with 800 MHz trunking
systems, and the inability of scanner listeners to hear systems that
are not within a good line-of-sight. Being as this is the bay area,
and we have hills and valleys all around, does anyone have any

I headed over to Berkeley in the afternoon with the intent to see the event. Well, the town was a zoo. Streets were blocked, PD everywhere. Four or five TV ENGs vans. The line to get into Haas just to see Bill Clinton on a TV screen filled the courtyard. [Zellerbach sold out the first day in a few hours.) I soon realized why the woman on the phone at Berkeley who gave me directions wished me luck. There wasn't a parking spot to be found for miles. The off campus public garages were all full. Nothing short of the second coming of Mario Savio could get this much of a crowd. I gave up and scanned from the hills. I band scanned 164 to 169, just looking for feds. I think they were on 165.2125 simplex, but it kept fading in and out. I got some FBI stuff on 169.545, but suspect it was unrelated. Media active on 450.2875 (talk of sites on B of A and Tam) , 450.4125, 450.4625 (but I think not at this event).

One interesting thing is there is a new tower on Volmer Peak and a rather large "shack" for equipment.

Unless the pack hanging underneath says PG&E, then its their own
internal data network.

The old wireless ISP was Ricochet.

OK Kids, lets all try and calm down and keep the topic to "scanning"!!!!!

I don't mind a little humor and even ribbing of each other since have a good a sense of humor as anyone but some people get pissed when they start getting too many e-mails not pertaining to the subject matter and then un subscribe.

I always prefer to keep this list un moderated so that any breaking incidents can be posted right away.

Sincerely,

Robert
BayScan List Manager

Hi Gary. I called you on 146.52 Tuesday during the X Potus visit to Berkeley. I also tuned in maybe 12 or so VHF secret Service frequencies but heard NOTHING but some occasional digital noise, some just white noise followed by a very short tone burst, others were more like commputer data bursts. No recognizable voices. BTW. the Banjo guy at Quentin was Eliot Kennin, a long time associate musician friend of mine. He's the only card carrying communist jewish guy I know. Go figure. Actually he's a lot of fun to play gigs with. I've played some fun gigs with him, like a bunch of SF Giants games as part of the Old Navy Splash Landing jazz band to mention a few. However, if he had asked me to play at Quentin, I would have told him, Long as I can wear my Pro death penalty T-shirt! Don't think I would have been there!
Jim
Ps. sorry I missed you at UC on Tuesday. Were you there?

The event was standing room only, so I made it there but gave up on attending. I did scan it from the hills. I thought I had some snippets of voice on 165.2125, but you can never tell when you monitor from a high elevation, and worse yet, near Volmer and Grizzly (intermod city).

The banjo dudes were good, but not good enough to risk hypothermia.

Emergency Preemption works off lightwaves. I don't recall the specifics but I've worked with the systems before. There are optical eyes located on the actual signal light poles that look for the flashing strobes. I believe it works off IR. 3M's product name is Opticom.

We don't have those in SF, unfortunately. I got used to them when I was a medic for Manhattan Beach. Very handy.

The antennas are for a new wireless modem system going in that will be owned by the city. They're not waiting for Ricochet to come back in some other form.

Bundy

Some cities (such as Sunnyvale) have preemption systems that are radio based. Air pollution makes keeping the optical systems working a real problem.

Your clue about the Opticom has proven to be useful. Here is what I found on the net:
==========
3M Opticom Emitter
. Emitters available in chrome and black finishes.
. Available as a preinstalled (on AeroDynic R , StreetHawk R , and Vector R lightbars) or as a standalone option.
. System includes: emitter, power supply, and power cable.
. High and Low Priority configurations.
The OpticomT Priority Control System from 3M is designed to increase safe pas-sage
of emergency vehicles and motorists by controlling traffic flow on the way to
a scene. With a model 3M592 signal emitter installed on an emergency vehicle and
a receiver connected to a traffic light, the vehicle's driver can momentarily alter the
light's phase to stop cross traffic with a red light.

==========
[page 32 of http://www.mdcharlton.ca/pdfs2000/VEHICLE.pdf, or just do a search on the document for Opticom, which is what I did]

A quick search of the patent office yields:
5,202,683
5,187,476

The patents have much info on how the light pulse needs to be generated: 10Hz, rise/fall time <20uS. Not too hard for someone to build on their own. [heh heh heh]

Nope, not too hard. You can also smoke the lens without reducing
operation. The one we used to (legitimately) test with had one. I
don't condone emulating a PS vehicle though. ;) Now if we could only
increase people's awareness for a GREEN light.

http://www.dailycal.org/article.asp?id=7536

I have some questions about Berkeley; here's what I have:

460.175 Dispatch
460.250 Channel #2
465.175 "Tactical" ...?
460.050 Channel #4

I hear them refer to "channel 2" and to "channel 4" but I never hear them refer to that other one, so "tactical" is what I have from some list or website. Is that really "channel 3" in some sense, and what's it's role? Channel 2 seems to be for either dedicated operations or for informal chit-chat away from the dispatch channel; it's also used when dispatch is handling a code-33 (? ... the beeper comes on and all other traffic is told to use channel 2). Channel 4 seems to get used mostly for records lookups. It also seems like 465.175 gets answered on dispatch, or maybe on both (maybe I should set up another scanner).

Not to carry on a thread without a frequency in it and invoke the wrath of the anal retentive, the patents for the Opticom had another interesting factoid in them. The system compares pulse amplitudes with another filter, and given the known time between pulses and the change in amplitude, it insures the vehicle is approaching the sensor and waits until the vehicle gets close before tripping. Now this seems like a good idea, but you could think of situations where the emergency vehicle would not be running fast enough or with a steady velocity, such as weaving around traffic. My guess is the traffic engineers figure that if you are not driving like you stole it, you don't need preemption.

A search and rescue is being initiated for a missing light aircraft believed to be down in the Mendocino National Forest. Aircraft was on a flight path on a line from St.John Mtn to Ukiah. Aircraft last seen on radar at 6300' northeast of St.John Mtn. No ELT has been heard.

Search base is at Willows airport. Unknown which county sheriff will be involved until aircraft is located or area is narrowed down.

25250. Flashing lights are prohibited on vehicles except as
otherwise permitted.

25251.2. Any motorcycle may be equipped with a means of modulating
the upper beam of the headlamp between a high and a lower brightness
at a rate of 200 to 280 flashes per minute. Such headlamps shall not
be so modulated during darkness.

Note you would need 600 flashes per minute to set off the opticom. Probably
the low to high beam transition limits the rise/fall time.

Now if the flashing light were hand held and just stuck out the sunroof....

> DH
>
> p.s. Is your web site going to be back online?

460.100 pl 203.5, simulcasts all of the main patrol radio
traffic depending on which area of the county a deputy is in. since
court security uses UHF (460.275, to me its unknown why since the rest
of the county is on VHF) they have the ability to go to the main
patrol channel if something goes wrong inside the courts.

and here is the new link to my site. it was down due to the @home/att
takeover:
http://home.attbi.com/~kma371/kma371.html

i plan to add more frequencies for county services and the other city
agencies in the county.

sidenote...plans are still in the works to add two more patrol
channels for the sheriffs department. freqs will be 154.950 and
155.790, currently the tac 1 and tac 2 channels. these channels will
be repeaterized like the current channels and tac 4 (155.040) will be
used for all car to car traffic, still simplex. they say the change
will occur within the next year, "they say" are the key words, i'll
keep my ears open :)

We never had any complaints and the sensors we did use had two eyes.
One eye was used for oncoming traffic and the other for traffic
leaving the intersection. It worked every time though. Maybe they used
a type of diversity receiving.

From: robert sanford
Topic: 8757 Message: 8757

I was thinking of posting it when I heard it earlier then said "aw its nothing".
Anyway around 5:30 pm I heard the GG Bridge PD talking about some smaller aircraft that were circling what they considered a bit too close to the GG bridge.

I went out to get some food and a when I got home (I live in Sausalito) I could hear what sounded like Fighter Jets but could not see them anywhere.

I see that they just said on the new that the GG Bridge PD had notified the FAA which in turn notified the Air Force who sent some F-16's down here to check it out.

Here is the Press account of it:

Scare At The Golden Gate

Air Force Jets Scrambled To Golden Gate Bridge After Small Planes Circle
Jan. 31 (AP) ☐ Two Air Force jets were scrambled to the Golden Gate Bridge during the evening
commute hours Thursday after bridge officials noticed two small airplanes circling the famous span.

The small propeller planes left the area after about 15 minutes, said Golden Gate Bridge District Lt. Mike Locati.
Locati says small planes are not supposed to be in the area, an air space change instituted in the wake of the Sept. 11 attacks.
Bridge officials followed protocol and called the Federal Aviation Administration which had the jets sent to the area, Locati said.
Locati called the appearance of the two small planes in such close proximity to the bridge "out of the ordinary."

I didn't say for sure there could be a problem with the sensors not going off, but the design has the potential to not trigger if the vehicle moves too slowly.

Do police and/or fire departments have test sensors nearby to check out the hardware without causing traffic problems?

The only method we had was to run through each intersection for every
direction with an emitter (Something I always enjoyed). Other than
that I'm not aware of a way to test trigger the cards. If there was
some type of failure and nothing was triggered the FD would just
notify us. It wasn't that big of an issue, plus the actual 3M card,
when it did fail, was several grand. So there were certain phases of
an intersection that didn't work.

I was following this on the MilAir side; they set up the CAP with the bridge as Bullseye -- the lead F-16 confirmed this several times with BIGFOOT, as they have been using the SFO VOR. Also, they were given the block from FL130->FL140 rather than their normal FL220. I have a view of the city from my place in Berkeley, so I took a look with the binoculars and saw them pretty clearly. I didn't know this was out of the ordinary and they began their targeting with a traffic helicopter that was mid-span. I heard something like "I don't have the targets at all" at one point. Then I had to leave, and my BC-235XLT doesn't do MilAir, so that's where I left off. I got on BART and looked around while I was at the Macarthur station: it was just after sunset, so there was good contrast. But I didn't see anything.

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-02-01 17:42:28 UTC
From: Jordan Hayes
Topic: 8757 Message: 8766

This might be way more information than asked for, but ...

> What frequencies were they using for this?

I don't have a very good setup for this, but I usually can hear them (I've only ever heard callsigns BAY-XX -- usually BAY-11, -21, or -31 with wingman of -12, -22, or -32 who basically says nothing unless asked by the lead, and often it's just acknowlegements like: "-2: clear to close on my wing" and the wingman chirps "2!") leave and contact Travis RAPCON (126.6 or 119.9, depending on which way they are going). BAY is not their "normal" callsign, so I'm guessing that it's just for the Travis deployment. Then they often get handed off to Oakland Center ("ZOA") @ 125.85 ("low") or rarely 127.8. Depending on what they are doing, they might be able to get their block of airspace from that controller, or they might need to talk to the "high" (FL230 and above) ZOA folks on 134.15 or 134.975. They are handled just like civilian aircraft in this phase, so if you can follow ATC, you can follow them: handoffs almost always include the frequency to follow, though sometimes they drop the leading one ("two five point eight five" is 125.85).

Here's a good reference with maps for ATC:

ZOA low:
http://www.faa.gov/ats/oakaifss/Airport%20Charts/ZOA%20LOW.gif
ZOA high:
http://www.faa.gov/ats/oakaifss/Airport%20Charts/ZOA%20HI%20FREQ.gif
Bay TRACON:
http://www.faa.gov/ats/oakaifss/Airport%20Charts/APCH%20FREQS.gif

... and this is the main page for that info:

http://www.faa.gov/ats/oakaifss/Airport%20Charts/arptgraphics.htm

One cool link on that page shows a map of the general flow for both normal and reverse (due to weird winds, etc.) operations at OAK, SFO, and SJC.

Once they get their dedicated block from ZOA, they don't have to talk to them anymore until they go home, and they do it in reverse order. Anyway, by the time they talked to ZOA they usually have checked in with BIGFOOT (the backend of the orbiting AWACS) on 271.0, perform authentication and get their mission, etc. Normally it's a 30nm CAP with bullseye being the SFO VOR, so if you have a San Francisco sectional chart, there's a 30nm ring to give you the orbit. 271.0 is also used to hook up with the tankers (callsign "RUBBER-XX") for refueling. BIGFOOT usually tells them which VHF ("victor") channel to

contact ATC on. Pretty sweet having your own controller up there :-)

They use pre-programmed frequencies, not sure when/if they change them around, but lately I've heard 271.0 refered to as "BLUE FIFTEEN" (I think BLUE means "second bank") and 296.7 as AMBER FOUR (where AMBER would be "first bank"). Maybe 1% of the traffic I've heard was on 296.7 and I haven't heard anything else anywhere.

They also use a frequency-hopping radio system called HAVE QUICK that requires some synchronization that doesn't always work. Here's a good article I found:

http://call.army.mil/products/nftf/marapr00/mackenzie.htm

I get the feeling that more and more of the air-to-air comms use that system; they've certainly gotten a LOT of practice in the last few months. So you hear "BAY-31, BIGFOOT: push secure BLUE NINETEEN" and then they are gone :-)

Here's where I started:

http://www.grove-ent.com/attack/attack.html

Scroll down to "Western Air Defense SOCC" ("WADS" -- SOCC is Sector Operations Control Center: gotta love the embedded acronyms!) ...

> Where are these F16's based? Lemore, Fresno?

I'm pretty sure they are from Fresno (194FS [194th Fighter Squadron] from 144FW [144th Fighter Wing, CA Air National Guard]).

http://www.scramble.nl/mil/usaf/california.htm#KFAT

But they are flying out of Travis. Travis doesn't have any based fighters.

http://www.scramble.nl/mil/usaf/california.htm#KSUU

Lemoore is Navy and thus doesn't fly F-16s :-)

http://home-3.tiscali.nl/~ti019223/mil/usn/ob_westcoast.htm#KNLC

Heh, I bet this message is now certified keyword bait!

I've have a page in the works on military airband scanners. It's not quite ready for prime time, but better than nothing:
http://www.lazygranch.com/milscan.htm

The 250D is pretty much cast in jello, so I don't know about it having mil air. The 785D is to replace the obsolete 780, which does have mil air. The 250 is to replace the 245, which as stated doesn't have mil air.

Personally, I've been thinking about getting a Yupi just for mil air, but that would only make sense if you take it out of the bay area. In the bay area, terrain is a signal killer. On mountain tops in the high desert, you are limited by the radio and antenna.

Right now Uniden owns the trunking market, but Uniden has never been known for making really killer radios like Yupi. If you are hard core, I'd suggest a Uniden for trunking and a Yupi for aircraft.

Yes Jordan,
BART is on a GE type EDACS system same as Oakland PD. So unless the 235 can do EDACS you are out of luck for tracking them. I have a 245 and have no problem tracking them from Richmond. Good luck.

The word is the 250D will have same frequency range as
785D. So we have a clue as to what it will be.

'Obsolete' is a tough term to describe the 780. I don't
think it's quite obsolete. It will continue to be a
very usable radio for the next several years.

I know we all like to talk about the latest toys, but
I'm wondering what the real 'value add' of the new
Uniden radios will be for folks in the Bay area? I refer
you to the Icom R3 as an example of technical hype over
utility. I don't think folks really found the ability
to watch video much more than an expensive alternative
to a pocket TV.

Anyway, back to the new Uniden radios...

What will the value add be for the Bay area? What new
features will let us listen to things or do things we
couldn't do with the 780?

The only benefit I can think of is that we may get to
monitor Travis' system. But I'm not sure if they're
using digital or digital+encryption.

Anyone else doing straigh Astro digital around here?

> Personally, I've been thinking about getting a Yupi just for mil air, but

I can pick traffic in the pattern at Travis. I can
hear them on 294.7 which is a local frequency.

I would suggest you consider the ability to upload
frequencies as a must for a mil air scanner.
Especially if you travel. Muct easier to remember a
standard list of tags (e.g. Tower, Ground), than to
remember everyone's frequency.

So I'd recommend the latest AR's (AR8200 MkII). I am
still getting good use out of my six year old AR8000s.

>

Why do you think the Yupi is 'killer'? With a proper antenna, the 780 is a very decent MilAir scanner. (Even Larry Van Horn says so. ;) The high scan speed is a big plus. The beautiful display and 16 character bank and channel tags also help in milair scanning.

The only down side is that the volume is a bit low on AM, so mixed mode scanning is a bit of a pain, but doable.

To answer the original question, I think that the radio shack scanners may do Mil Air and trunking. I own a 245, and while it is a good trunking scanner, it sucks on VHF air band. It has no UHF airband.

Ack, don't even think about getting a 2500, not in
the Bay area...

It was my first scanner. Bought it because 3k wasn't
available. And it was one of the cheaper scanners to
do mil air.

It is a triple conversion unit that has the image
rejection of a daul conversion... ;)

BART is EDACS.

The 235 was Uniden's first trunk tracker. Suggest you
poke around:
http://www.strongsignals.net
http://www.trunkedradio.net

It all depends on what you want to listen to. The 235
tracks Motorola Type I, Type II and IIi in 800MHz.

The 245 added Type II 400MHz/900MHz trunking, and EDACS.

The 745 and some of the radio shack models added LTR
trunking.

THe trunkedradio.net site will give you a clue about
which agencies/business do which trunking.

In my case, I guess I have the option of getting a -245 today or a -250 at the end of the year. The -250 seems like it's nearly 2x the cost, though. But it does seem to add MilAir. Also: SF uses digital today for some stuff, and although it was said that when the digital scanners come out they will switch to encryption, do we think that's going to be the norm? Won't more places be coming up digital without encryption?

You asked for a comparison to the 780, so I guess you're mostly talking about the base and not the mobile; for me, I think the mobile is worth waiting for to replace my -235.

During the first several days after 9/11, the Navy was
flying E2-C's from Travis. So the base is being used
for more than just cargo traffic.

F16's are based at Fresno Air Terminal.

They go TDY to March AFB and now I guess Travis.

Lemoore is a Naval Air Station...

All things being equal, I'm sure the services prefer
to use their own assets. Given the 'closeness' of
Lemoore and Travis, why would the AF pick Lemoore?

When I talked to the engineer from Uniden at CES, the 250 and 785 will cost the same as the radios they replace. This is because you need to buy the Astro card separately and that card is going to be over $300. Both radios will have much more memory in them. If you don't own either radio, wait. If you own more than one 780, I'd absolutely ebay all but one because they still fetch nearly the new price. I'm guessing the Astro card will flop big time at $300, and eventually will slide to just under $200. At that point, if there is enough astro out there, it will sell.

The description of the 250 from the engineer at Uniden was to simply add more memory and astro card capability to the 245, not military air. I'll be happy to be proven wrong.

I have an AR8000, but my cheap ass sony SC1PC does a much better job on mil air. The sony can hold a distant plane longer. From the mountain top I like to scan from in Nevada, military air reception from Utah, Nevada, Arizona, and California can be done, but the long distance stuff is marginal. AOR base units are pretty good, but their handhelds are just better than average and not worth the premium.

I've waited for Yupi to make a scanner with a data port, and it just isn't happening. For something like mil air, where things don't change that often, programming by hand will be fine. I'd still use the sony at airshows where reception is not a challenge and you want to set up the radio for each event. How far away is a plane at an airshow? Two miles when getting in position. That hardly tests the capability of the scanner.

If you can pick up travis with the 780, fine. I want a good portable. I've used someone else's Yupi, (older 7100) and it is a killer scanner. Remember, this is a handheld unit. It is hard to make a good handheld scanner due to size constraints in filtering. Comparing a mobile to a handheld is like comparing a Mercedes to a Honda. Here is Rich Well's comment:
==========
Those who have tested and used a wide variety of HF/VHF/UHF handheld receivers will tell you that when it comes to sheer performance of tuning signals, nothing really comes close to the original MVT-9000. If any model had to be picked as a runner up, it would probably be its sibling MVT-7100!
==========
Regarding Ratshack, I did a check of all their scanners when I made my list, and only the old ones had mil air. If there is a Rat Shack with mil air, I'll gladly add it to my list.

8782. Traffic light preemption systems (was: 800 Mhz antennas hanging from Lightpoles)

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-02-01 21:25:45 UTC
From: Smokey Behr
Topic: 8711 Message: 8782

That was the original OptiCom system. The "new" OptiCom II system uses an embedded code in the flash stream to determine the level of preemption, and if the unit is authorized to preempt the signal. If you watch the pattern of the strobe, you'll see it stutter, which is the address being send by the remote unit to the traffic light.

When the traffic light sees the strobe, it looks for the pattern, compares whether the unit is authorized to preempt the light, and its preemption level. It then logs the date, time, and unit number and preempts the light.

If 2 units are coming at each other on perpendicular streets, and are requesting preemption, the unit with the higher preemption level will get it. Usually the levels are set with EMS on top, Fire next, and LE last, with buses on the bottom, if they're using it.

That's true in big cities...intermod like crazy. When driving into the Bay area with my 2500, I always have to disconnect the outside antenna and use a "high-loss" rubber ducky inside the car!

Harry

I was wondering if anyone else out there(like myself)has ever scouted out "pawn shops" for that "golden" scanner find? I've looked in a few of the Pawn shops in san francisco and found most to have a couple that were in poor shape if that..Usually very high priced for thier condition..Most of the shop owners don't know how they work or IF they work at all.So has anyone else looked around the area to see what's out there??

Re: finding scanners in pawnshops. Someone suggested watching police auctions, too. A quick and easy place to check about 100 PDs unclaimed property is at http://www.propertyroom.com/

PDs contract with them to auction unclaimed found & confiscated stuff. If you can provide a serial number that matches an item they have, they'll even let you "steal it back"

Appears to be a reputable outfit... on the board of directors is a retired NYPD Assistant Chief, LAPDs Daryl Gates, and some other apparently-reliable folks

Interesting browsing if nothing else...

I'm pretty sure they moved 194FS to Travis because of it's proximity to the Bay Area; SUU is maybe 10-15nm outside of the normal 30nm CAP ring. FAT is well over 150nm from SFO, and NLC (Lemoore) is about 30nm south of there.

>Anyone else doing straigh Astro digital around here?

The only things I can think of are Travis which is not always encrypted. Being it's a typical Military base they *can* go encrypted but from my monitoring, they're in the clear.

SF Trunked system is another. The digital stuff isn't always encrypted. I caught NARC4 in the clear the other day. I believe the EMS talkgroups are always encrypted. No loss anyway.

Lawrence Livermore Labs. The main site for the Lab is very busy during the day. This system is ASTRO only. Security is the only thing encrypted and they go in the clear sometimes. Outside normal business hours you have Lab Fire and Security as the only active users. Maybe maintenance sometimes.

Federal Corrections Institute, Dublin. This is a small system for the prison. It's ASTRO only. I listen to it periodically and it's boring. Active, but boring. Open gate, close gate, prisoner counts, etc. Last I heard, something around 1300+ prisoners.

Alameda County's future is unknown. Their current setup will not support ASTRO unless they switch to a SmartZone system.

And as far as I can tell Contra Costa *will* go trunked. My guess is it will be an ASTRO SmartZone system. Maybe they won't use digital, maybe they will.

Maybe Marin? I don't know, I haven't heard any details.

State of California will go trunked in the future. I'm willing to bet they'll use digital.

Wayne

The real question should be why the hell did it take an hour for the F16 to show up??? if those were terrorists the bridge would have been be gone by then! And then you have the media saying that officials were not concerned be cause the pilots circled 8 times and left.......a terrorist would not have done that?????? CAN YOU SAY DRY RUN???THEY PRACTICED FOR 9/11 they say....I think they should put two mil air at every damn airport and if some plane wanders were they don't belong blow them out of the sky!!!!!or at least follow them and talk to pilots ....It appears that didn't even happenAt 10:34 PM 2/1/2002, you wrote:

> the F16 to show up???

I'm not sure it was an hour. I do know that from the time I heard them check in with Travis Departure (shortly after takeoff) to the time when the CAP was established was no more than 4-5 minutes, certainly on par with a typical EMS call. The random nature of the patrols means that when Murphy Circles The Bridge, they aren't airborne. I've read that these patrols when not up are on Ready-5 or Ready-10; it's also not clear how long it took the FAA to contact USAF, etc.

To the other poster, if my earlier message was too long, hang out on 271.0 and you'll hear something.

/jordan

Calm yourself, this was no "dry run" by plane owning local terrorists, it was a couple of foolish small prop planes checking out our country's number one tourist attraction.

Terrorism, because of it's very nature, can't be effectively guarded against without turning the country into an Orwellian police state, and probably not even then. Suppose you put a guy with a uniform and an unloaded machine gun at the metal detector of every airport, as we have. As someone who has flown many times since September I can tell you those fellows (and gals) are completely unalert. A single, independent terrorist need now only walk through the metal detector armed only with the needed ammunition strapped to his body or magazines in his pockets (so what if it sets off the metal detector -- those things are being set off 3 times a minute), walk swiftly behind the National Guard soldier (along with everyone else at SFO), a quick garrote (or kidney punch) and there's now a terrorist with a loaded machine gun at an airport where several hundred people are conveniently crowded together in a confined place. That would have a traumatic effect on the confidence of flyers and make international news, don't you think? And effecting the population and making international news is what terrorism is all about.

Anyone who has been to a European airport can immediately see the difference between the soldiers alertly on duty there (as if their lives depended on it) and the NG soldiers loitering here.

Another example? I went to a bachelor party in Las Vegas a few weeks ago. On the way there a friend hand carried a bottle of brandy on board. On the way back 3/4 of a bottle of brandy was in his carry on, neither time was it examined. What if it had been a nerve agent, napalm or just ordinary gasoline? What if there had been 2 other people with similar bottles willing to start cabin fires at critical locations? What's it like when 200 people are trapped in a confined place that's in a precarious position (10,000 feet up) in a room that's on fire and breathing poisonous smoke? (No, you can't drop the oxygen masks!) Is the answer to examine or ban all fluids in carry-on (thus potentially releasing a nerve agent at the security checkpoint)? Has anyone "in power" even considered this possibility?

Besides, attacking the Golden Gate Bridge with small planes would do no significant damage to the bridge, no one would miss the planes, and there wouldn't be many collateral deaths. It would cause a temporary media sensation (like the guy who tried to crash his small plane into the White House a couple of years ago), but actually taking the bridge down would cause the more permanent type of wounding that we're told to expect from this enemy. A more realistic treat is a commandeered and loaded natural gas or petroleum ship being explosively crashed into one of the pillars heating it to very high temperatures, and the Air Force wouldn't be able to do much

about that. Hopefully the Coast Guard is stopping and boarding such vessels before they approach. The Air Force is up there just in case they can be at the right place at the right time, and to make people feel that something is being done.

One of the rules of terrorism is that you attack soft targets where success should be easy. That's no longer true of domestic airline traffic. Since domestic passengers and aircraft are now very carefully scrutinized and the cabins protected, terrorists are unlikely to try that again (though airport incidents are more likely). Even more daunting to a terrorist is the memory that this sort of attack was rendered ineffective as quickly as the 4th hijacked plane, and was similarly neutralized in the shoe bomber case -- passengers may accept being treated like livestock by airlines, but they no longer act like sheep-to-slaughter when confronted by terrorists. That doesn't matter if the passenger compartment and perhaps cockpit are already on fire, but since a goal of terrorism is targeted attacks, randomly bringing down planes is sub-optimal, starting cabin fires doesn't give you control of the plane, quite the opposite, it makes the plane uncontrollable. Such attacks could paralyze the airline industry and, by extension, damage the economy, but it's more guerrilla than terrorist.

In case I've really scared you, I should also mention that I have confidence that all the terrorists here were rounded up in the big sweep. Many of these sort of ideas only take one person to carry out, not a team, and in the 5 months since September we've seen no attacks (anthrax was caused by a citizen with a political, not a terrorist, agenda). I was especially worried over Thanksgiving weekend, but nothing happened. If there had been even one dedicated terrorist available that's when s/he would have acted (maximum impact and a carryover effect to the December holidays). So I think that until new terrorists are let in, we're safe. Of course, a lot of foreign devils may be coming here for the Olympics. <grin>

We need to expect the unexpected, and the problem with that is obvious.

There are preflight checks. I suppose if the budget were infinite, they could have fighters in the air at all times. Considering the DOD can't account for 2.3 trillion dollar during the Clinton/Gore term, one suspects the budget is infinite. [And Clinton/Gore was the only administration to ever audit the DOD, so the missing money since the cold war must be over a hundred trillion.]

After all the hoopla of 911, I have yet to see any publication indicate how fast we can get an XXX to the scene. If a helicopter preflight is faster than a jet, who cares that the jet is faster. The point is who gets there first. Air 2 in San Jose can reach any point in the city in 90 seconds. I think an Apache attack helicopter can whack a Cessna or two, no need for fighter aircraft.

Remember the fighters never made it to the WTC in time either.

If you believe we have all the terrorists rounded up, then you must believe
we had "peace with honor" at the end of the Vietnam war.

And just what jail cell is the anthrax mailer locked up in?

The Air Force is up there just in case they can be at the right place at the right time, and to make people feel that something is being done." Yes, the Coast Guard and Navy are doing their part in checking out Inbound ships. The Large Freighters or anything over a certain tonnage has to give the Port a 96 hour notice they will be inbound. They are stopped 12 miles out at the San Francisco Sea Buoy. The CG Boards the vessel and checks everyone out and the cargo. The CG along with the Pilot rides in the bay with the ship to it's scheduled port or berth. They are armed to the T during their journey. Like the Air Force the CG has the orders if the vessel goes anywhere where it isn't supposed to I.E.: toward the base of the bridges, land marks they have the orders to use lethal force and take back control of the vessel. So, when you see a large vessel coming or going under the GG or Bay bridge there are Coast Guard men/women on them. There have been a few occasions where suspicious vessels have been chased by the CG in the bay. I heard one where 2 vessels were under the Bay Bridge. A 41 and 21 Footer CG boat and a HH-65 Helo were sent to intercept the "unknowns." It tuned out the boats were part of the Bay Bridge retrofit project and they were taking pictures. The problem with that is no one told any one it was happening. The other question now-a-day's is ....What if those have been terrorist with shoulder launch missiles?? Then what??

The Oakland, CA trunking system appears to be some type
of digital system. All of the info I have on it indicates it's EDACS.

Has anyone been able pick it up on a Pro-93?

If so, any tricks to it's set-up?

I don't live nearby but regularly drive 680 and should be close
enough to pick it up.

I see the talkgroup numbers appear but no sound.

Any comments appreciated.

Kevin

The last thing i heard was only the narcotics channels are digital, the rest are open... Oakland's system is very bad and very hard to hear unless you are close or near water... They were planning to dump there edacs system and move over to alco's trunked moto system. haven't heard anything on that for a couple months...

Ben,

Thanks for the confirmation.
680 is just too far away to pick up Oakland.

I believe we did have peace with honor. I also believe
you are a slimeball.

The fact is that the men and women of the military did
the best they could with the restrictions they had at
the time. Johnson knew the war was 'unwinnable' and
McNamara was a fool.

The Democratic leadership that failed to properly
execute the war effort was dishonorable. The majority
of the grunts who toted rifles through rice patties did
serve with honor.

Excellent. This one seems covered then.

I took the Bay Bridge this morning and noticed that the NG HumVee has been replaced by a camouflage painted pickup truck. Didn't see any soldiers around, just the pick-up truck in the bushes. Maybe they were well camouflaged . . . There was a stranded motorist about 25 feet from the pick up too.

So I'm wondering if someone who has reached your position
of ignorance and inflammatory rhetoric is born that way
or do you need to take lessons.

Preflight checks don't need to be made immediately
before takeoff. You can preflight and then
let to plane sit on alert.

If you think SAC aircraft committed to SIOP would
preflight after the klaxon, you're dumber than I thought.

Yeah, too bad Clinton raided the military to support
his insaitable appetite for travel:

http://www.senate.gov/~rpc/releases/1999/eb092199.htm

Blah... blah... blah...

So how long can an Apache loiter? Can in inflight refuel?
Does Gary have a clue?

(Hint, answer for all three is 'no')

>
> Remember the fighters never made it to the WTC in time either.

And your point? The issue was what was the military
posture at the time?

When 'required', B-52s flew airborn alert. If we want
to feel safe, we need to spend money.

While you're looking for money, how about:
http://www.rense.com/general12/cisn.htm

> > If you believe we have all the terrorists rounded up, then you must believe
> > we had "peace with honor" at the end of the Vietnam war.

Sorry, I'm too young to have any direct knowledge of that war. I was, however, taught that Kennedy put us there.

The logic behind my belief that all are arrested is that there have been many occaisions in which a single professional, determined, suicidal terrorist acting alone could have made a big splash, and none occurred. I don't think that means we should drop our guard, but I do think it means that there isn't a single professional, determined, suicidal terrorist at large in this country. Put another way, she'd have had means and motive all this time, and several prime opportunities (around the holidays) and no action was taken. Every day delayed for such a person would increase the chances of being caught, and there's just no reason for her to not just go out and do it. (I'm using "her" because it breaks the stereotype and stresses the unexpected.)

The anthraxer has not been caught (to public knowledge). The anthraxer's targets (with 2 probably accidental exceptions) form a quite different agenda than that of the militant Muslim terrorist groups. The Tylenol killer was never caught either. The only connection is that the anthraxer seems to have thought that the choas following the terrorist attacks would help cover her trail. The media hyped both to a lather (which did real damage to the country) despite an astronomically low actual risk.

8823. Why is trunking so prevelant in East Bay?

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-02-03 06:25:22 UTC
From: b52hbuff@att.net

I finished my East Bay tour. Heard some great SFPD
'undercover' work. Can anyone add some information to
the line:
"He might be a 148, so take him down hard?"

...might mean?

Anyway, I guess I can understand why large municipalities
like SF or Oakland would be swayed by the promise of
a large trunked system.

But in the east bay, smaller municipalities are banding
together and going trunked (e.g. Richmond, El Cerrito).

So why haven't we seen this in Santa Clara, or San Mateo
county? I notice that the City of Santa Clara has a
trunked system, but noone else uses it.

148 is somebody who is known to resist arrest.

San Mateo is going trunked, but not the municipalities. Just the county public safety, so I'm told.

Bundy

I finished my East Bay tour. Heard some great SFPD
'undercover' work. Can anyone add some information to
the line:
"He might be a 148, so take him down hard?"

...might mean?

Anyway, I guess I can understand why large municipalities
like SF or Oakland would be swayed by the promise of
a large trunked system.

But in the east bay, smaller municipalities are banding
together and going trunked (e.g. Richmond, El Cerrito).

So why haven't we seen this in Santa Clara, or San Mateo
county? I notice that the City of Santa Clara has a
trunked system, but noone else uses it.

I read this last night. Unfortunately I can't find the link I read but
I find a few things right now stating Motorola will have the contract.
It'll be a SmartZone ASTRO system from what I recall. Anticipated
completion date is April 2003.

Do a search from San Mateo County's website and you'll find a bit.

Trunking is actually prevalent in a lot of areas of the US.

There is a new Kelty military book. Check HRO.

http://www.scannerdesk.com/scannerdesk/milnorad.htm WADS on this list is "bigfoot", and is used once in a while. Mt. Tam is the local site.

Personally, if you want to military scan, take a day or two off and head out to Rachel Nevada and monitor Red Flag. It is a hundred times better than anything you will hear in the bay area. [Unless you actually like listening to cargo pilots talk to the tower.]

I have some photos here http://www.lazygranch.com/red_flag_0201.htm (more in the works) and could dig up some recordings in MP3. [I had to remove the red flag recordings I had on the web site due to lack of space.]

If you are interesting in shortwave, there is much more activity, but still not as good as Red Flag.

A bit closer than Rachel Nevada would be Fallon. I haven't run across any people who specialize in monitoring Top Gun, but I bet it would be interesting. You would have to pioneer this, i.e. get the schedule, freqs, etc.

Well, there is always summer time for Red Flag.

For shortwave, do google searches on GHFS and "mystic star". I'd suggest parking a radio on 11.175 usb and eventually some military traffic will come through. You might as well add EAM to your google search, as well as SKYKING.

From memory, most GHFS is on 8.992, 11.175 and 13.2 all USB.

Thanks for the reference. Yeah, I know there are other users, but I find the patters of usage 'interesting'.

So like I was saying, for whatever reason it seems like the East bay has more trunking. Is it where they happened to be in a buget cycle? Is it because someone was friends with Motorola or GE?

Why did the City of Santa Clara go for a trunked system?

Seeing the aggregation of municipal systems in the East Bay, makes me wonder why Palo Alto, Mountain View, Sunnyvale and other Santa Clara cities didn't jump on the City of Santa Clara's system?

And given that most of these cities are flatter than those in the East bay, dead spots shouldn't be as big a problem.

In a national sense, it seems like Florida is heavily into trunking? Once again, I wonder why?

In a nutshell, lack of available frequencies as demand for talk paths increases, and fiscal constraints.

Many of the Santa Clara County cities, and many others up the Peninsula got relief when UHF-TV opened, or they could share with Stockton or the S.J. Valley due top the East Bay Hills blocking the signals. The East Bay jurisdictions [being in the middle] impact co-and adjacent channel users in three directions.

Yeah, remember a while back, DA Mayor ordered all the cops to ride a bus at least once per shift. I remember hearing cops boarding streetcars at 4 am, getting off 15 minutes later. One cop gets on the streetcar (or bus) and his partner follows him in the car. This particular night there was NO passengers on the streetcar......that a way Willie, sure cutting crime LOL.
I am driving up to the city tomorrow and will program those FREQs in to see what I can hear. But I know SFPD still is doing the riding thing (code number for it is 903) . Muni does use 484mhz and some 488, so could be for them. Will post my findings. Later

I doubt it, like my earlier post. Most SFPD are two-man cars. One officer boards a bus, LRV or cable car, rides several blocks with his partner following, he gets off and back into the car. They may use undercover at times, but I hear the uniforms doing this all the time. Uniforms, patches all SFPD.

There is a "secuity force", they board the lrv's and check to make sure you have paid, the reason is the new proof of payment system, which was designed to make for faster loading. They do give tickets, for not having proof of payment, ie.. a transfer.

Thanks, Merlin! I noticed yesterday that Jim Aldrich from OES had a new credit card for riding MUNI, as well as all public transportation in the Bay Area. I think it was called FastLink or something like that. He's part of a pilot program.

Bundy

There is a "secuity force", they board the lrv's and check to make sure you have paid, the reason is the new proof of payment system, which was designed to make for faster loading. They do give tickets, for not having proof of payment, ie.. a transfer.

From: Jim Gammon
Topic: 8859 Message: 8859

Another thing you may wish to consider is buying one of the small wideband micro-handheld receivers like the Yaesu VR500 or the cheaper VR120?? I think it is. I know the VR500 covers from .2 KHZ up to 1300 MHZ minus the cell phone band thanks to our wonderful legislators!!! The VR500 has 1000 memories and is not a true scanner but it will scan its memories. It also does great on wideband stuff like wireless mic's, and standard FM and TV audio. It will not scan trunked systems. You can also set a low and high parameter and search between the frequencies.
Jim

The unofficial word is no. But I don't believe the State would have a
full 700MHz system. The Motorola radios which cover 700MHz also
support 800MHz. Dual band in a sense.

Hi Gary, not sure what you mean by bandscan. You can program in up to 1000 memories and scan them all. You may be able to scan banks of them but I can't figure out all you can do with the thing because it's so display dependent and I can't use the display, only the beeps!! Anyway, you can program in Shortwave, sideband, WFM, AM etc. and scan it all and get the rig to hold on any given frequency or monitor a given frequency for a few seconds and move on. It's a pretty frustrating scanner and not the greatest selectivity, but for a cigaret pack size shirt pocket radio, it's pretty cool! 73's, Jim

Bandscanning is just another buzzword for limit scanning, that is scan a band between two frequencies. In mil air or federal, you often don't know the freqs. If there is a frequency list, it is often wrong because the military/feds can do whatever they in their bands. Many frequency lists are just collected by people who don't go on site and scan it first hand, so you really need to bandscan on site. [That is why Ed T. asks for confirmed frequencies, rather than something just lifted off a list.]

HCL is kind of nasty and I don't believe it is used in swimming pools. The real common pool chemical is butyric acid. [Ah, smells like vomit.] A google search will show you a few other uses for this chemical, mostly by the holier than thou religious right wingers.

> Bandscanning is just another buzzword for limit scanning, that is scan a
> band between two frequencies. In mil air or federal, you often don't know
> the freqs.

The challenge here is picking the right steps and making
sure you don't get thrown off by images.

For example, in the mil air band, most comms are on 100kHz
steps, but there are coms now in 50kHz and even 100kHz
lists. Now you've got to decide whether you step smaller
and risk missing out because your scanner is to slow.
Or you step bigger, but miss something on the smaller
offset channels.

> If there is a frequency list, it is often wrong because the
> military/feds can do whatever they in their bands. Many frequency lists are
> just collected by people who don't go on site and scan it first hand, so you
> really need to bandscan on site.

Yeah, and then there are the dishonorable slimeballs
that take others' work and advertise it as there own.
The result as has been seen from other lists recently is that authors
will pepper their lists with errors to see who's stealing
their work. I refer you to the infamous 'Bandplan Delta'.
;)

Hardcore bandscanning also requires using two scanners simultaneously: one scanning up in frequency and one scanning down in frequency.

Does anyone have an updated list of Alco Stations and Equipment
I checked Alameda Countys webpage and the link to ALCO Fire. It
gives most of what I wanted but I have a couple questions. It shows
two Engines in some stations? what is the numbering ? I would have
assumed Station 4 has Engine 3454 but thats wrong because I know
Engine 3454 runs out of Station 14 shared with CDF. Thanks in Advance
Also looking for the numbering of the patrols,hazmat, watertenders
etc.thanks
Ed

Depends upon what you mean by 'hardcore'?

Direction isn't as important as spectrum searched.

If I had two scanners to put to the problem, I'd cut
the spectrum they searched in half. If I had four,
then I'd cut the spectrum to a quarter.

...get the picture?

Having them scan the same spectrum in different
directions is pretty wastful. Even if all things were
equal, soon there would be the real possibility that
they'd stop on the same signal...

8878. DEFENSE DEPARTMENT TO SHARE SPECTRUM WITH FIRST RESPONDERS

Yahoo group: bayscan (2002-01 — 2002-06)

NEWS RELEASE from the United States Department of Defense

No. 056-02
(703)697-5131(media)
IMMEDIATE RELEASE
February 5, 2002
(703)697-5737(public/industry)

DEFENSE DEPARTMENT TO SHARE SPECTRUM WITH FIRST RESPONDERS

The Department of Defense today submitted its report to Congress regarding the feasibility of sharing the 138-144 MHz band with public safety users. A DoD Joint Spectrum Center engineering study identified ways sharing would be possible without interfering with DoD operations.

Deputy Assistant Secretary of Defense for Spectrum and C3 Policy Steven Price said, "We believe it is possible to share portions of the 138-144 MHz band with public safety users on a limited, coordinated basis. DoD is willing to work with National Telecommunications and Information Administration, state and local governments and first responders on a case-by-case basis to explore sharing the band for the common good."

While the 138-144 MHz band continues to be critical to DoD operations, the department has found it helpful in emergencies to share communication systems with other first responders. A small number of channels may be shared on a regional basis when it is to the mutual benefit of DoD and public safety officials.

DoD operations that would be affected if this band were interrupted through heavy use of too many channels would include air-surface-air, air traffic control and ground support functions at military airfields, tactical communications for close air support, land mobile radios for sustaining installation infrastructure support and land mobile radios and specialized equipment for training and test range support. Other systems that would be affected include fire and security alarms, and hydrology and utility controls.

The National Defense Authorization Act for fiscal 2000 reclaimed for federal, primarily DoD, use of three megahertz in the 138-144 MHz band previously identified, pursuant to requirements of the Balanced Budget Act of 1997, for reallocation for mixed federal government and non-federal government uses. As Congress

understood, the recovery of 3 MHz was and is crucial to fulfilling DoD's spectrum requirements. However, in the conference report, DoD was asked to provide a technical report assessing the feasibility of sharing the 138-144 MHz band with public safety users. In the fiscal 2001 authorization, Congress directed DoD, in cooperation with the Justice Department and the NTIA, to provide for an engineering study with regard to spectrum sharing in the 138-144 MHz band. The assistant secretary of Defense for Command Control Communication and Intelligence (C3I) has submitted this report to the Senate Armed Services Committee and the House Armed Services Committee.

Under direction of Assistant Secretary of Defense for Command, Control, Communications and Intelligence (C3I) John Stenbit, the DoD Joint Spectrum Center conducted an engineering study regarding sharing in the 138-144 MHz band. The resultant classified study showed that the areas of operation associated with the DoD frequency usage in the 138-144 MHz band encompasses nearly the entire continental United States. Large distance separations would be required to prevent co-channel and adjacent-channel interference between DoD equipment and potential state and local public safety systems, particularly in the case of DoD air-ground-air radios.

Rather than "thanking" our wonderful legislators, I doubt they would have ever bothered going down that legislative path had it not been for the "undesirable element" among us scanner enthusiasts; especially folks like the big-mouthed Martins in Florida who couldn't just LISTEN to a cellphone conference call between republican Congressmen John Boehner, Dick Armey, Tom DeLay, and then-Speaker Newt Gingrich; no, they had to also record it and then turn it over to Rep. James McDermott, who then gave it to the media. IMHO it was actions like the Martins that really started the scanner-tightening down the slippery-slope to who-knows-where. Outright prohibition? Geez I hope not.

We need to look first among ourselves, and those few who take to the airwaves and internet bragging and extolling about "fringe" or outright illegal activities related to our hobby.

The "push" frequency tends to be very close to where the squadron was transmitting, but it could be up or down. Now with two scanners running in opposite directions, they tend to both fall on the same freq. When the "push" occurs, one scanner goes above the old freq, the other beneath it. One will hit the new freq very quickly.

If you divide the spectrum, it is likely one scanner won't hit the new freq at all, while the other scanner could have bad luck and go in the wrong direction for a while.

http://www.airnav.com/airport/KSFO

This says that 124.25 is for the "east" gates (1-52) and 121.8 is for the "west" gates (53-90). Those look like old gate number ranges, because the new International terminal has three digit gate numbers?

Also: are the ground frequencies split between arriving aircraft and departing aircraft?

Not to beat a horse to death here, but I believe the cell phone capable scanners were restricted before Newt self-destructed.

The EPCA dates back to 1986 (Bush/Qualye or maybe Reagan/Bush), while Newt's problem happened during the first term of Clinton/Gore.

IIRC, the 1986 ECPA made it illegal to listen, but the prohibition against manufacturing, importing or selling cellular-capable scanners wasn't until, what 1994 or so?

Then in 1997 Rep. Tauzin tried his HR 2369 to outlaw "any scanning receiver that is capable of--
`(1) receiving transmissions in the frequencies allocated to any commercial mobile service (as defined in section 332(d),
`(2) readily being altered to receive transmissions in such frequencies,
`(3) being equipped with decoders that convert digital commercial mobile service transmissions to analog voice audio, or
`(4) being equipped with devices that otherwise decode encrypted radio transmissions for the purposes of unauthorized interception.'.

It didn't pass.

I did a little research on the net and found this in the 1986 EPCA:
==========
Section 2512. Manufacture, distribution, possession, and advertising of
wire, oral or electronic communication intercepting devices prohibited
(1) ... any person who intentionally -

(b) manufactures, assembles, possesses, or sells any electronic, mechanical,
or other device, knowing or having reason to know that the design of such
device renders it primarily useful for the purpose of surreptitious
interception of wire, oral, or electronic communications ...

shall be fined not more than $10,000 or imprisoned not more than five years,
or both.
http://www.nf2g.com/scannist/ecpa.html

==========

Since the word manufacture is there, clearly the scanners were illegal after
1986. But that doesn't mean an outright ban, so perhaps you are right.

Newt's indiscretion (the phone call, not banging his secretary on the office
desk which was what finally got him kicked out) was in 1997:
========
Early 1997 saw the beginning of a witch hunt sponsored by the cellular
industry in cooperation with certain congressmen who have received extensive
financial support from industry representatives. (See the Grove Enterprises
site for more details.)

The storm began when a Florida couple (the Martins) allegedly intercepted a
cellular conversation that was being conducted between Dick Armey (House
Majority Leader), John Boehner (Republican Conference Chairman), and Newt
Gingrich (Speaker of the U.S. House of Representatives)
http://www.nf2g.com/scannist/us_laws.html#witchhunt
==========

So that would make it the second term of Clinton/Gore.

The murky news is reporting that the Santa Clara County SO has received the go ahead from county supervisors to purchase a new helicopter.

I don't monitor any other agencies with helicopters, how does communication usually work? Does the helicopter have its own separate freq. or do they use one of the regular dispatch channels? How do ground units communicate with the helicopter? Do they usually have an aero band freq. assigned to the helicopter?

John,

In Sacramento County the SO helo uses the main
talkgroup for the area they are in to communicate with
dispatch and ground units. They also have their own
talk group for the personnel assigned to the Aero
Squadron.

Same with San Francisco, John. They monitor whatever PD "A" talkgroup of the district that they happen to be over. They also have the ability to talk on the digital and encrypted talkgroups.

Bundy

John,

In Sacramento County the SO helo uses the main
talkgroup for the area they are in to communicate with
dispatch and ground units. They also have their own
talk group for the personnel assigned to the Aero
Squadron.

I'm wondering what ground units they'll communicate with?

Will they just talk with SO? Will they communicate
directly with municipal PDs or just use some CLEMARS
frequency?

While we're here, does the SJ helo talk to other PD
units on CLEMARs or on their own frequency?

How often do you hear SJs Helo up?

I am sure they will have a multi-band, multichannel radio. I have heard SJPDs Air One (the old one) on East Palo Alto primary several years ago.
plus they should have the fire channels as well as SJPD Air Two does.
You can bet they will be able to talk to any LE in the county plus CLEMARS etc. Notice the article mentions the FBI, I would assume they will have that capability too.

From: Brian Christensen
Topic: 8897 Message: 8906

My very good friend is a pilot on SJPD Air 2 and formerly Air 1. As a matter of fact I have flown with him and Desmon Casey (the pilot that died in Air 1) in Air 1. I have not flown in Air 2 yet, though I have an invite.

Air 1 had and I'm sure Air 2 has the ability to communicate with most ALL agencies in Santa Clara County including Fire and AMR. They can pretty much pick and choose which calls they want to respond to but if dispatch needs them on a hot call they can easily find them on one of the SJPD main "beat" channels.

Yes, they talk to the ground units no differently than two beat units talking to one another.

I'll let the group know when I'm going up in Air 2. If any of you are Hams I'd be happy to make a QSO while in the air. Probably will be this Spring when the evenings are a little longer with daylight.

Yah, they are kind of like that joke about the 800 pound guerrilla that can "DO ANYTHING IT WANTS" only in their case, they can transmit anywhere they want. Calstar and H30 have synthesized rigs that will cover pretty much anything from Am broadcast up to 30 meg's and of course 800 MHZ as well.

8919. Trunking question (BC245/Motorola Type II Smartnet +)

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-02-08 17:53:17 UTC
From: Christopher Handisides
Topic: 8919 Message: 8919

I was under the impression that Motorola Type II trunked systems arrange their groups in increments of 32, beginning the count at 16 (16+32+32+32, etc.). I've been running ID tracker on the UCSC TRS, a Type II Smartnet + system, and I've been getting a number of hits that don't fit that pattern. Instead, they've been in increments of 16 (96, 448, etc.) Is this an alternate way to program things, or is it something weird on my end? Also, for those of you with BC245's, when you get spurious hits, what sort of numbers do you get? I took a look recently at the ID Tracker logs, and surprisingly most (if not all) of the talkgroups that I dismissed as mistaken hits happened to fall into either the aforementioned 16 or 32 patterns.

Thanks,
--Chris

8920. Re: Trunking question (BC245/Motorola Type II Smartnet +)

Yahoo group: bayscan (2002-01 — 2002-06)

If you look at the Talkgroup Hexadecimal numbering the natural order is 16, ie 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, a, b, c, d, e, f.

The talkgroups number indicate a certain function and are normally spaced at 32 decimal but 16 may be used.

Dec Function Note
ID + 0 720 Normal talk group Base TG normanlly incremented in steps of 32
ID + 1 721 All-Talk group Fleetwide mode
ID + 2 722 Emergency talk group Emergency mode
ID + 3 723 Crosspatch talk group Interconnected talk group
ID + 4 724 Emergency crosspatch
ID + 5 725 Emergency Multi-select
ID + 6 726 Unknown
ID + 7 727 Multi-select Initiated by dispatcher
ID + 8 728 DVP talk group Digital Voice Privacy
ID + 9 729 DVP All-Talk Group Fleetwide DVP mode
ID + 10 730 DVP Emergency talk group
ID + 11 731 DVP Crosspatch talk group
ID + 12 732 DVP Emergency Crosspatch
ID + 13 733 DVP Emergency Multi-select
ID + 14 734 Unknown
ID + 15 735 DVP Multi-select talk group

752 Next assignable talk group

Anyone out there know what TG + 6 DEC and TG + 14 is?

8921. SF Trunked System Questions

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-02-09 01:03:42 UTC
From: b52hbuff@att.net
Topic: 8921 Message: 8921

So I have a copy of Kelty's Trunked Radio Systems. It appears to have a pretty comprehensive list of talkgroups. I'm curious as to how other folks organize their scan lists?

For example, there are several police districts (e.g. A-I). And there are 'Service', and 'Dispatch' identifiers. The districts are pretty easy to figure out from a map... What are 'Service', 'Dispatch' and 'Station Service' used for?

Is 'Dispatch' always for station to patrol traffic? Which are used for car-to-car traffic?

What is 'PAT Muni Tac Traffic'?

And now for fire...

What is the difference between 'Dispatch', 'Command' and 'Tactical' channels?

There are EMS channels... Isn't this function provided by AMR?

...and what is 'DTIS Radio'? Thanks...

8922. Re: [bayscan] SF Trunked System Questions

From: caladded@aol.com
Topic: 8921 Message: 8922

For Police, I set up A1-A8, you will notice the same districts use A1 and 2 , then A3&4,then 5&6, then 7&8. Dispatch is pretty obvious, calls go out on this channel. Service is for running 10-29s, talking with the stations etc.

Fire - they use A1,2 and 3 for dispatch, units talk to control on these channels depending on which Division they are in (A1 is Division 1 , A2 is Division 2 and obviously A3 is Division 3. The Command Channels are for greater (2+) alarms. Usually A4 is for Division 1 , A5 for Division 2 and A6 for Division 3. The Tactical channels are for fireground communications simply broken down by which Battalion your in.
Division 1 has Battalions 1,2,3 Division 2- Battalions 4,5,7 and 8
And Division 3 has Battalions 6,9 and 10. Basically Division one is Downtown, south of Market, Financial Dist, Chinatown, Nob Hill, Telegraph Hill and Fisherman's' Wharf.
Division 2 has the Western Addition(Fillmore), part of the Tenderloin (Division 1 has some of it) Haight-Ashbury, Pacific Heights, The Marina, Richmond and the Northern half of the Sunset District.
Division 3 has the rest. (Note: There is a Division 4 , its the Airport)
The SFFD took over EMS a few years back, they are backed by AMR and a couple other private ambulance companies (King-American for one)
hope this helps.
Ed

>patterns.

The only reason systems do it is to support Priority Monitor scanning.
It's a type of scanning that allows the radio to receive sub audible
data over the voice channel about other calls on the system while it
monitors its own call (For a higher priority scanlist member).

ASTRO systems use a different method to receive other active groups
while scanning so they can space them incrementally. It may seem every
16 but it is actually in single increments since the Trunk Tracker
uses the wild idea of including the 't-bit' (Or as Uniden calls it,
the status bit).

Though some systems may not use it is has just become commonplace.
Similar to rotating control channels even though the stations are
continuous duty.

It's been active since about 9pm tonight; they wait around for a particular flight and then head home in this mission. Tonight the flight they are waiting for is late . . .

484.1125 is licensed to Equity Office Properties, a commercial property management company from Chicage, with a 75-watt repeater authorized at One Market Plaza in San Francisco;

also licensed to Champion Communication Services Inc from Texas, with a repeater on San Bruno Mountain;

and to Hytek Communications Inc, with repeaters near Vacaville and Los Gatos.

And who knows who else might be lurking there...

Im sure most of you heard the fire tonight at the cannery Alma & 87 area.
the one thing that I could not figure out was the dispatcher who asked on
command 4 about every five min. for a situation update. It was like she
wanted a play by play great for us but that
IC officer must have been pulling his hair every time they are still there
now mopping up hot spots
things really got harry when the warehouse behind the restaurant went
up.....anyway great listening .....someone should
have taped it.

Yeah it really was, luckily there was a fire just before it on Command 3 so this one had to go to Command 4 which IS repeated. Too bad they switched a lot of traffic to TAC 6 (153.83) Can't get that from here. Can't remember which, but one of the TV stations had decent footage.
Glad it didn't get into the Bold Knight, good restaurant and Cop hang out.

yes bold night has some great food,,
so why do you think dispatch kept asking for updates?
I did not know they were using tac 6 thats county yellow I think
truck/company ten was there till about midnight.mopping up they were on
command 4 till 11pm or so

This event is a combination radio show, electronics fleamarket and auction. The friendly (ha ha) folks from HRO will be there and will have a few show specials, similar to what they do at Pacificon. Doing some searching I managed to find this link:
http://k6ly.org/radiofest/
The event will be held February 23, 7AM to 3PM at the old Fort Ord in Monterey. Talk in 146.97- PL 94.8

I noticed that Elecraft will be there. They make killer radio kits that Heathkit could only dream about. Seeing them in the flesh is worth the trip.

While you are there, check out the new paint at Fort Ord (heh heh heh)

Not sure why they kept asking for updates. Which Truck company was there until midnight? there is NO truck 10? LOL, whatever which one it was it wouldn't surprise me if they had them relieved for another unit all night. Unfortunately San Jose Fire has had more than a few fires rekindle, tells me there overhaul procedures need reviewing. I remember an "under control" 3rd alarm turn into an out of control 6th alarm a few years back. There are in such a hurry to get units back in service. I have NEVER heard of that in San Francisco. SF , of course has lot more manpower and equipment even though it is about 1/3 the size of San Jose. But SF is much more crowded too , fires can jump from one building to another much easier, I have seen that way too often.

Thought everyone might enjoy reading the latest re: a change to SJFD main dispatch.
I know absolutely nothing about this but will try to let you know when/if I do. Furthermore, I don't know if this is a channel they already have or
something new. If this is something they already have, then they will simply have to
make sure all mobile units switch to the correct frequency.
If this is something they don't already have, it will be a nightmare to get all their mobile and portable radios reprogrammed.
Then there's the issue of reprogramming mobile and portable radios of nearby adjacent agencies. You'd think someone woulda' realized this was a problem a long time ago and have solved it by now.

See below....

Hi folks. I am selling my 780XLT. I purchased it in December from Scanners Unlimited. It is in excellent shape. Here is the ad I posted on Craigslist.

Uniden Bearcat BC780XLT Trunktracker III scanner. 500 Channel. Purchased in December from local (San Carlos) store. Like new. Selling due to unexpected financial situation. Has manual, two frequency guides (Kelty's Bay Area and Trunked Systems). Includes AC power supply, serial cable and TrunkTrack780 software. I do NOT have the mounting brackets for mobile use, or the DC connectors for mobile use. It is currently programmed with Richmond PD and Fire, and some of the BART talkgroups. $250 firm, cash only. You must pick up in Richmond.

If anyone is interested, please let me know.

8945. Recorder Problem

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-02-11 02:49:55 UTC
From: magikaldj
Topic: 8945 Message: 8945

I have a question about using a scanner recorder on the PC. When I hook it up and run the program, it runs fine but, I get no audio out of the PC speakers. When I playback the recorded audio, it works fine. Anyone know what adjustments I need to make so I can hear the audio while recording? Help greatly appreciated.

Mark

Hello everyone..

I'm looking some advice on what type of outside antenna to use... I live in livermore so i'm smack in between the altamont and eden canyons... I mostly listen to low band, high band and 400 mhz fire & 800 mhz trunked fire. Any suggestions and what do you guys use for antennas would be appreciated.

If you are terrain limited, an outdoor antenna may not make much of an improvement. The question is what MARGINAL signals do you want improved reception. Find a high spot near your house and see if more altitude makes a difference on those marginal signals with just a hand held scanner.

If you are using a hand held scanner, you may get pager intermod problems with the outdoor antenna. Base station scanners generally are more immune to such problems. Pagers are toxic waste! Nuclear! Friends of Enron. Did I mention I hate pagers....

Generally you upgrade the antenna when you have a marginal signal. If everything you have sounds solid, what is the point in upgrading.

Since you have an outside antenna, what are you using now?

It sounds like you are not in the flats of Livermore. If you have altitude, get the discone. I haven't seen one pager complaint regarding the 780, so I guess it is solid.

Many of the areas you mention have transmitters in high locations, so its not like you are hearing an ice cream vendor on the boardwalk of Santa Cruz, but rather a repeater a bit above Los Gatos. Or maybe more relevant, you couldn't hear the DOJ track some dude in Santa Cruz.

8961. [bayscan] best antenna

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-02-11 08:20:14 UTC
From: The Cosmic Group
Topic: 8950 Message: 8961

In regards to the subject of Antennas, I simply use an "Scantenna"
attached to a Radio Shack tv antenna mount strapped onto the side of our
Fireplace (over 15 feet above street level) It picks-up rather well
so maybe turning or getting your Antenna's higher, you are able to pick-up
weaker signals.

Same goes for my business, as my Antenna is perched even higher than
that of my residence possibly a good 25 feet or more above street level
Concord P.D. comes-in rather well as does areas East of Antioch (ca)

I reside in Pittsburg (ca) and can tune-in Concord P.D. and Walnut Creek
which is no easy task as we live in a valley surrounded by hills. No
complaints here as I can also pick-up
Sacto. County CHP and other agencies (sometimes if I like or not)
the intermod can get quite nerve racking but that's what the L/O
button is for!.

If I play with the Squelch a bit, I can pull in Tracy and Stockton as well.
My main listening pleasure is the Local P.D., Sheriff and Chp.
Fire is really not much to listen to around here until the warmer season is
upon us. Some of the Ambulance traffic and Medical traffic can be some great
listening I.E,

"Yes, we have a Sixty-Nine (69) year old suffering from dehydration and
quote; Bad people trying to get her...
We're 4 minutes out and will see you in a few....."

Too funny!.

From: Christopher Handisides
Topic: 8950 Message: 8962

Many of the areas you mention have transmitters in high locations, so its not like you are hearing an ice cream vendor on the boardwalk of Santa Cruz, but rather a repeater a bit above Los Gatos. Or maybe more relevant, you couldn't hear the DOJ track some dude in Santa Cruz.

If you can get anything other than Santa Cruz County Fire (154.325) or the Sheriff's Office (155.565), you've got reason to be proud. Once in a blue moon Santa Cruz Police Department (154.77) will make it over "the hill", but almost nothing else besides those three ever do.

Hey Mac User!! They have a joke of a version of Windows Media Player
for Macintosh. Check it out here...
Actually, they have security for shareware here at the school I work
at and the tech override button works off of Java, something
Microsoft royally screwed up in Internet Explorer and it doesn't work.

Go to www.google.com and search for Windows Media Player and the
download site will show up.

I am running it on OS X just fine.

Folks,

I've checked the PerConCorp db and it appears 155.025 is already
registered to the City of San Jose. No other cities close have that
freq. allocated to them. I think the closest I saw was Bakersfield,
CA.

Can ANYONE explain to me why SJ Fire hasn't simply exchanged use of
their REPEATERED Control 4 (making it their main dispatch channel) with
154.01 (as a tac channel)? The field units on 154.01 would be close
together and interference with SSF would not be an issue. This only
requires a POLICY change, and could be put in place in a few hours...

Think I got an answer John, 153.98 is TAC 10 for Napa County Sheriffs.
For my scanners without CTCSS I can pick them up from time to time.
Interesting thought, however. I don't understand why Command 3 is NOT
repeated and Command 4 is. I like would love it if they ALL were repeated.
I am sure everyone else on this list would too, got lucky last week with the
cannery fire. Command 3 was busy with the mobilehome fire down towards Morgan
Hill, so the 3rd alarm went on Command 4 , heard every bit of
it.....well, until they went to TAC 6 ;-(

8978. COCO Sheriff APB's

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-02-12 05:04:45 UTC
From: mikesrvca
Topic: 8978 Message: 8978

Contra Costa County police agencies broadcast APB's amongst each other using a frequency called CLERS, which is 155.670. Here's some-more COCO info for those who are interested...

155.310 Sheriff West (Orinda + Lafayette, AC Transit contract Moraga PD)
155.250 Sheriff Central (San Ramon + Danville Contact)
155.190 Sheriff East/Pittsburg+Rio Vista Simulcast (Oakley Contract)
155.950 Sheriff Tac-1 (West County)
155.250 Sheriff Tac-2 (Central County)
155.625 Sheriff Tac-3 (East County)
155.040 Sheriff Tac-4 (County-Wide)

Moraga units are 16 series, Lafayette is 18, Orinda is 23, AC Transit is 34.
San Ramon units are 25 series, Danville is 21.
Oakley units are 22 series, Rio Vista is 7, Pittsburg is 9. LMC is 24.

County Units are always 1 series.

COCO Sheriff contracts for San Ramon, Danville, Lafayette, Orinda, AC Transit, and Oakley police services. COCO dispatches for Pittsburg, Rio Vista, Moraga and Los Medanos College PDs.

There must be some historic reason why Command 4 was set up as
repeatered. I always assumed that its grand designers planned for it
being the main dispatch channel.

Does COCO SO have a standard channel plan? I don't listen to them
enough so I'm not sure if they announce switching to the channel by
referring to channel number or name. Can someone advise? Thanks.

Wayne

Mike, Antenex has a scanner antenna that works very good for me and it looks like a cell antenna to boot, model number is ASCANC (for chrome) ABSCANC (for black) use with mag mount G8XB and you have 12' of RG8x with a BNC connector and no adapters needed. For more info go to www.Antenex.com they have an online catalog and their quality is second to none.

Nic...
I've seen the antenna that you mention, and had some questions about the cable options. I'm mainly looking to pull in 800 MHz signals, but I sometimes monitor VHF high-band and UHF. I was concerned about the signal loss with the RG-8 at 800 MHz. Do any of the cable options justify the extra cost??

http://www.davisrf.com/ham1/coax.htm has some tables with attenuation. The length of wire is missing in action, but the length used in the table is 100ft. You probably want to limit the loss to no more than 2db. RG-8 will have an impedance mismatch with the antenna and radio. Yeah, Larry Van Horn says to ignore the mismatch and go for low loss, but why not buy the right cable and get low loss and a good match.

If you want stuff besides 800Mhz AND gain, you will need more than one antenna. The yagi means you will need a rotor if you want multiple locations. All this work only makes sense if you have a clear radio horizon. If you are terrain limited, all this work and expense is questionable.

For a HH, I like a flexible antenna since the BNC on the scanner will eventually break if you walk around with a non-flexible antenna. I have a couple Diamond RH77's. Diamond has revised this antenna a few times. I use the B rev, but I think they have gone to C rev. You can use it as a dual band ham antenna or just scan off of it. For those who backpack, the antenna is pretty rugged. I used to put mine in a tube I had made at tap plastics to transport it in the backpack, but that tube eventually cracked. Now I just push the Rh77 in the backpack and haven't damaged one yet in 3 years of that kind of abuse.

I only bother with external antennas in automobiles for ham applications because you really want to get the RF outside of the car so you don't damage automotive electronics. I had a car that buzzed behind the dash when I used 5 watts inside it.

I'm getting ready to put some ham gear in my latest vehicle and will put in a connector for scanning, but haven't picked an antenna for scanning yet.

You might just want to ask Bob Kelty at the next Foothill Flea Market (March 9th) for suggestions.

I just changed to rg-8 and I can see quite a difference in receiving those
distant areas
San Louise obis used to be in the mud but they appear stronger and I can
hear Sonoma county county clearer than before
Jeffrey in HollisterAt 12:54 PM 2/12/2002, you wrote:

> referring to channel number or name. Can someone advise? Thanks.
>
> Wayne

each channel is different...channel 1 almost always says "go to tac"
which is tac 1. often times the just switch to the talkaround
(output of the repeater) and talk there. channel 2 either says "6" or
"tac 2" which is the same frequency. "6" is just the channel
number tac 2 is on the mobile/handheld radioes. channel 3 units use
"tac 4" most of the time which is channel 8 in the radio slot.

check out this link to my page for the channel layout:
http://home.attbi.com/~kma371/patrolradiochannels.html

Date: 2002-02-13 07:28:04 UTC
From: jlittleton1
Topic: 9006 Message: 9009

They just called another DOA; they were planning two patients for
Life Flight, now it's just one. CalSTAR 2 just left with one patient
for San Jose. Life flight will be going to VMC. Also sounds like
the road is going to be closed for awhile.

I'll agree on the open microphone or carrier, but moving the scanner around
makes the oscillation go away. I think there are multiple transmitters.

well the body count for highway 25 must be at about 30 in two years, Living here in Hollister it is always kind'a scary to pick up the weekly paper every other week there is pics and another story about a family torn apart. what they need is a station somewhere between Gilroy and Hollister the drive times are way to long for emergency units most of the time its 15 min. no matter which end you come from. You would think somebody would give a damn and stop the foolish building here in San Benito county, a road designed for 15 thousand cars a day is trying to handle over three times that!!!!!!!!!! And to make matters worse Santa Clara says there is no problem .....asses(sorry off soap box now)At 10:56 PM 2/12/2002, you wrote:

Here is the story on the accident last night in Gilroy.

Bay Area Neighborhoods : News

2 Dead, 3 Hospitalized in Gilroy Head-on Crash

February 13, 2002 07:09

The Santa Clara County Medical Examiner's Office reports that two teen-agers died and three other victims were hospitalized Tuesday night in a head-on crash south of Gilroy.

According to the medical examiner, one of the cars involved in the collision held four people, two of whom died and two of whom were taken by helicopter to trauma centers in San Jose. The other car was driven by a solo motorist, who was also taken to the hospital by air ambulance.

The two fatal victims were an 18-year-old and a 19-year-old, both young men from Hollister.
The California Highway Patrol reported that units responded to the scene of the crash on state Highway 25, just south of Bloomfield Avenue, at 10:35 p.m. Tuesday.

The CHP said that details of the incident would be released this morning.

They might have been testing the system on the green 488.8875. Sometimes the radio techs send a signal over the freq. It starts low and goes high almost sounds like one of the air raid sirens. They are usually testing some problem.

Yes, they have multiple transmitter sites. Sometimes you'll here a chopping sound or a Helicopter sound. It the transmitters working. They sometimes repeat on each other Being San Mateo County has lots of hills there needs to be multiple sites.

Since you're right in the middle of things, you've got a better perspective of what's going on, and what needs to be changed. Hollister is becoming another bedroom community for Sillycon Valley, just like Los Banos, Tracy, and the other towns along the 152 and 580 corridors.

My suggestions are to make SR25 a 4 lane divided freeway from Hollister to Gilroy, and make proper interchanges at SR156 and US101.

New Jersey has had electronic speed signs on their turnpike for years. The weather gets bad, set the speed lower. Of course, Jersey drivers are held in esteem only slightly higher than Enron executives, so maybe you need such a system in New Jersey.

OK guys time for my 2 cents. I have ridden my Honda Goldwing in ALL lower 48 states. While 99% of my riding is here, I spent 3 days or more in each of the following states -- Nevada, Utah, Oregon, New Jersey, Georgia, Kansas (don't know why) , Illinois (Chicago), Wisconsin and Montana. I spent 2 days in many others and just drove thru the rest, or maybe one overnight. I don't find one state any different from the rest, idiots in all 48. There are just MORE of them here since we have the big population. Nuts in New Jersey, New York, Colorado .....on and on. We need to start training drivers WAY before they get to drive. We need an attitude change, not more laws. Start em' when they are young...an automobile, truck, motorcycle etc is NOT a weapon etc.....OK, I am done .....Hey Jeff, how was Fire / Rescue any new FREQ ????

I'm not sure of it's use, but Kelty has down 151.925 for Roaring Camp. I live and work within a couple of blocks of that line, and every now and then I'll "Service Scan" my 245xlt on the railroad freqs, but I haven't heard anything yet. To be honest, I haven't been trying all that hard. If I find anything, I'll post it.

FCC license shows 151.925 for Roaring Camp Inc at Felton (KEN910);

and for Santa Cruz, Big Trees & Pacific it has160.995 & 161.55 (WNUK937); the latter is a UP (ex SP) road channel, probably used for interchange or trackage rights operation at Santa Cruz.

When I get a hit on this frequency, it sounds warbly (?) and the voices are hard to make out. And then when they stop talking, there's this background noise that leaves my scanner lit up like the squelch is all the way off. Hitting the SCAN button puts me back in scanning mode and does NOT stop on that channel the next time around.

Any ideas? Maybe it should be FM and not AM?

/jordan

9047. RS pro-2066 good for San Francisco scanning?

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-02-15 10:29:20 UTC
From: Hugh Mann
Topic: 9047 Message: 9047

I'm about to close the deal on a Radio Shack PRO-2066
"Trunk Tracker" scanner, wanted to make sure it'll
work well for Bay Area scanning. I'm especially
interested in police, but also other general scanning.

I know the 2066 (the predecessor to the 2067) can only
handle Motorolla trunking, no EDACS, but I think
that's fine for SF?

Any input on this?

Thanks for any help.

My March column in Scanning USA magazine talks about reorganizing your banks. I won't post it here until it comes out published but look for it in the bookstores (I have no clue where in Bay Area but they say Barnes and Noble has them.)

This is the best place to ask that question. Once you get a feel of how others on this list program their radio - you'll see ideas you like and dislike and put them to good use with your organization of banks.

I have 2 radios in my vehicle. My HAM radio and a scanner. The HAM radio (Alinco DR-605TQ) Is set up with HAM freqs that I can communicate on. It also has Fire and Police and other freqs (can receive but can't transmit) Those are the Primary freqs like Sheriff Primary,Police Primary ,Fire and so on. In My Scanner (RS Pro-2066) I have the secondarys and Tacs of the Police and so on. Also I have other freqs I don't listen to as much but, have them when I need them. Since I live in Santa Rosa I have them in Bank 1 , Sonoma County Bank 2 , State Bank 3 , Aircraft Bank 4, and San Francisco Bank 5. Hope this helps <<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<>>>>>>>>>>>>>>>>>>>>>>>>>>>>>> Paul Young-KF6YYI 145.350 - 88.5 Lat:38.42.58 Lon:122.66.65 USCGAUX (http://www.cgaux.org/) : Oyster Point Mobile 11 IPN (http://www.incidentpage.net/) - SF0 002 NWSS (http://www.nws.mbay.net/spotter.html) - SO 10 "Climb and Maintain or Crash and Burn!" Mike, depending on how much and where you travel, I had my 245 and/or software with LAFD, LACoFD, LASO (no PD cause of digital) also Sacramento County. I have a bank for the Reno/Tahoe area. Do you get into Oakland or the City much? I know you have troubles getting either from your area, depending on how much you do get in range, both are great to monitor? In the summer I have one bank just for CDF.

They are killer scanners in terms of radio reception quality (totally blows away the AR8000 overpriced scanner), but Yupi never put a computer interface on their scanners, which today is a drawback. Good sensitivity and freedom from intermod, and fast scanning. [I worked with a guy who bought one at Foothill for around $300. You could be in a sea of computers and the scanner would cut through the RF mine field.] I'm considering buying one just to use for military scanning. [Not the easy airshow scanning, but for use in the desert where the planes can easily be a hundred miles apart at times, such as what happens during the Nellis Red Flag exercises.]

I've bought two radios from Javiation with no problem. You can also try www.bander.com , but last time I checked they don't have a secure web page. With bandercom, I set the deal up via email, then phoned Finland at a predetermined time to give my credit card number. [I got my export version of the Yaesu FT50 from them.]

I have heard that this dealer is good as well: http://www.cbshop.com

9059. The honorable Richard Cheney appearing in Pleasanton

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-02-18 04:19:24 UTC
From: gary
Topic: 9059 Message: 9059

The White House is letting the honorable Vice President Richard Cheney out of his secure location to attend a fund raiser in Pleasanton Wednesday. The Contra Costa Times article follows.

While I guess he will land at Moffet to acquire money from Silicon Valley, it would be interesting if AF2 lands at Travis and even more interesting if it lands at Livermore.

==========
PLEASANTON -- Vice President Dick Cheney ...
CONTRA COSTA TIMES

PLEASANTON -- Vice President Dick Cheney will make one of his few public appearances after Sept. 11 on Tuesday when he speaks at a $1,000-a-plate fund-raiser for Rep. Richard Pombo, R-Tracy.

The private event at the Ruby Hill Golf Club, 3400 West Ruby Hill Road, should draw about 250 people, including some of the region's top political contributors, said Pombo's Chief of Staff Steve Ding.

Pombo is running for his sixth term representing the 11th Congressional District, an area formerly concentrated in the Central Valley that has been redrawn to cover four counties around the greater Bay Area.

Pombo, who is chairman of the Western Caucus, has close ties to the White House and champions many of the same issues that Cheney does, Ding said.

"Vice-president Cheney is a Westerner, and they see eye to eye on a lot of things," he said.

While in Northern California, Cheney will also appear at an event supporting Rep. John Doolittle, R-Roseville.

Last year, Pombo raised $221,412 in campaign funds, public records show.

Escalon resident Tom Benigno is running against Pombo in the March Republican primary.

Two Democrats, Elaine Shaw of Danville and Robert Figueroa of Tracy, are also running for the seat.

None of Pombo's three challengers have experience in elected office.

Dear PC guru's

I apologize if this has been answered before but, I could use some advice. I have tried using the scanner recorder program with the following problems. If I hook it up to the mike input, I get no sound from the PC speakers when playing/recording but, if I access the recording afterwards using media player, it works fine.

If I hook it up to the line in, I can hear it fine through the PC speakers but, the audio doesn't seem to register in the scanner recorder program, it won't record. When I open the recorded wave, its silent.

Any help is greatly appreciated. Thanks in advance for any help.

Very Respectfully,

Mark

Be sure to set your computer's audio source correctly. Right-click on the little speaker icon (if you have one) by the time display, and go to OPEN VOLUME CONTROLS >> Options >> Properties >> (select:)RECORDING >> OK >> and then be sure the correct audio source is checked ... Mixer, CD, Line-In or Microphone, and its volume slider is somewhere in the middle . Then minimize (don't close) that box while you record.

There are Playback and Recording controls for each audio Input/Output device.

When you double click the speaker icon in your System Tray (The icons where your time is located at the bottom left of your screen) it displays your Playback controls. You will probably notice that your MIC has it's MUTE check box checked. Uncheck this and you will hear when your recording through your MIC input. You can also control the speaker output level here (This does not affect the recording level).

To change to your Recording control you will select Options (From the pull down menu) then Properties then Recording. This is where you can select the input for your recording (either Line In or Mic). You can also adjust the recording level here.

Mike, I was just in Scanners Unlimited the other day, talked to a gentlemen who seems to have inside information and it was just talk. If his information is good/bad, of course, is anybody's guess. But think, unless its REAL bad, it would cost the city of Oakland a bundle to completely change to Motorola, even if its just for fire.

From what I've heard, it's just talk, as you say.

But it's serious talk, I'm told.

Bundy

Mike, I was just in Scanners Unlimited the other day, talked to a gentlemen
who seems to have inside information and it was just talk. If his information
is good/bad, of course, is anybody's guess. But think, unless its REAL bad,
it would cost the city of Oakland a bundle to completely change to Motorola,
even if its just for fire.

One of the reasons they're selling trunking systems so well is because of interagency operability, between police, fire, and other agencies, especially in times of disaster. I found it hard to believe that one of the main public saftey components in Oakland would jump to Motorola, even-though most of Alameda County already has. I've seen how fire departments that have switched, have patches for all the state mutual aid channels, like white 1.

It sounds like Oakland was attempting to get the city to pay attention to coverage issues, especially in the heart of the Oakland Hills firestorm.

Do any other cities use their EDACS system? I know Piedmont does... but I read Ericsson's press-release on the Oakland system from awhile back, and they cited Emeryville and Alameda. I know Alameda is using ALCO's system for public saftey, but what about utilities? In listening to a pursuit a few weeks ago, I heard the Patrol 1 dispatcher patch to Emeryville PD to notify their units... does Emeryville use the system? or do they just maintain a patch?

It's built-in to the "services" stuff (there are others for FRS, CB,
Marine, etc.) on my BC 780/XLT.

Here's what I have:

02 59.75
04 71.75
05 81.75
07 179.75
09 191.75
20 511.75

There are others, I guess; those are the ones that have content.

(Want to apologize about the dick the dick comment, I was in a goofy mood, won't happen again).

Anyway, about the PC soundcard issue, sounds like you might not have a full duplex soundcard. Some (usually older) soundcards can't monitor what they're recording while they're recording it, just like in a half duplex radio transmission. Let me guess, this is an ISA soundcard?

Anyway, my guess is get a newer soundcard and you'll be fine.

City of Oakland has just filed an application with the FCC for a new Site near Seneca Reservoir in the Oakland Hills. The file number for the application is 0000771632.

I talked to an Oakland Police Captain last May at an APCO meeting and at that time indicated that they were trying to get money to develop the site. Guess they found some money.

Ed

Here is a map of the general area.

The city of Livermore got more range added to their trunked repeater system after losing a lawsuit that involved a chase that exceeded the city limits. I wouldn't say "never".

The FCC should dump a few UHF TV channels and open up bandwidth for conventional radio use. Oh wait, that won't make Moto as much money as a complicated trunk system.

9107. Re: [bayscan] Emeryville simulcast

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-02-20 01:50:38 UTC
From: John Smith
Topic: 9107 Message: 9107

For what reason would law enforcement/fire simulcast trunked and non-trunked the same information in a non-mutual aid situation? (I'm assuming this is the same information.) Are some units not equipped with trunked radios?

Come to that, I am able to pick up some San Francisco PD traffic on non-trunked channels. I was working under the assumption that these were their control frequencies and that listening to them would reveal traffic, but miss large parts of conversations. Is SF simulcasting too (sorry, don't have the freqs at hand)?

Hope your wrong, but I won't bet agaist your statement. This one certainly turned out to be nothing. But the kids today need to know, that even joking about it is a bad idea. Just like making a joke about robbery in a bank, a bomb on a plane (especially now) and yelling fire in a crowded theatre, they are NOT joking matters. glad this one was false

Santa Clara City Fire similcast, probably because they have Reserves, although they do have pagers, it saved them from having to buy trunked scanners out of their pocket when they went to the 800mhz system. Note that Santa Clara City Police are NOT similcast. You can still get SFPD on their low band channels, although not a lot of traffic.

Go to a web site called Topo Zone at http://topozone.com/

You can then get your Lat/Long.

Make sure that the cursor is set to DDDMMSS Lat and DDDMMSS Long

Once you have the Lat/Long in Degree Minute Second format go to

http://www.ngs.noaa.gov/cgi-bin/nadcon.prl

and convert from NAD27 to NAD83.

There must be more to LCN than just low to high. Otherwise, the manuals would just say enter the frequencies in ascending order rather than the crypt LCN order.

I regularly monitor Oakland PD from the Orinda area, and reception is terrible. Once you get away from the tunnel, Oakland PD reception in non-existent, unless you go out to the Tilden Park area. I've also had the same problem with Richmond's system, which I can start picking up until I get into the El Sobrante area. Hopefully if Oakland gets that license, it'll improve my listening from one town away!!!

It depends on how close to the 580 corridor you live. BART's system only works well if you're near their stations, or along major freeway corridors where there's a good line-of-sight. Can you hear the control channel at all if you turn down the squelch?

Bart from parts of Livermore should be possible. Don't worry about the sequence of freqs, but put your radio in conventional mode and listen to the freqs. If you hear activity on some of the freqs, then work on getting the scanner to follow the trunked system.

To: bayscan@yahoogroups.com
Subject: RE: [bayscan] lcn question

It depends on how close to the 580 corridor you live. BART's system only
works well if you're near their stations, or along major freeway corridors
where there's a good line-of-sight. Can you hear the control channel at all
if you turn down the squelch?

There must be more to LCN than just low to high. Otherwise, the manuals
would just say enter the frequencies in ascending order rather than the
crypt LCN order.

9131. RE: [bayscan] Re: Oakland Fire Change?

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-02-20 04:52:13 UTC
From: Brent Finster (DSL)
Topic: 9071 Message: 9131

There are three fire/EMS dispatch communications centers in Contra Costa County. Here is an explanation of the three centers and what areas they cover by dispatch channel:

Contra Costa Regional Fire Communications Center "ConFire":
CON WEST CHANNEL (159.735 MHz.)
Contra Costa County Fire District (North Richmond, San Pablo, El Sobrante area)
Moraga-Orinda Fire District (EMS transport agency)
City of Pinole Fire Department
Rodeo-Hercules Fire District
Crockett-Carquinez Fire District

CON CENTRAL CHANNEL (160.110 MHz.)
Contra Costa County Fire District (Lafayette, Walnut Creek, Pleasant Hill, Concord, Clayton, Martinez area)

CON EAST CHANNEL (159.615 MHz.)
Contra Costa County Fire District (Antioch, Pittsburg, Bay Point)
Oakley-Knightsen Fire District
Bethel Island Fire District
East Diablo Fire District (Brentwood, Byron, Discovery Bay, Marsh Creek/Morgan Territory)

City of Richmond Communications Center:
RICHMOND 800 MHz. ERICSSON EDACS
City of Richmond Fire Department
El Cerrito-Kensington Fire District

Note: One of the fire talkgroups is patched to the CON WEST channel (I don't have the talkgroup ID number handy) so you can listen to all of the western
Contra Costa County fire departments using the
Richmond system.

San Ramon Valley Fire Communications Center:
SAN RAMON LOWBAND SYSTEM F2 (46.440 MHz.)
SAN RAMON VHF SYSTEM (153.995 MHz.)
SAN RAMON UHF SYSTEM F22 (460.575 MHz.)
San Ramon Valley Fire District (Alamo, Danville, San Ramon) (EMS Transport Agency)

Unless otherwise listed, AMR is dispatched to all EMS calls the ambulance transport agency on 935.6875 MHz. (central and east) or 936.7125 MHz. (west)

True, but a different system. They have El Cerrito and I believe San Pablo
on
that system.

2-19-02

Hey Mike:

Regarding the call sign for Fremont PD....

Fremont is divided in 3 zones:

Zone 1 is composed of Central part of Fremont
Zone 2 is composed of Northern part of Fremont
Zone 3 is composed of Southern part of Fremont

X-ray Unit is the day shift
Ocean Unit is the mid shift
Adam Unit is the swing shift

ie. 1X5 meaning this unit is in Zone 1 and it a day shift unit and the last number is a slot number that are assign to an officer.... there is exactly no meaning of the slot number. And the department is composed of A-side/B-side, there is no meaning to this.. just how they have it.

Other things you may hear are:

T Unit - Traffic unit
any slot number that ends in 21 or 22 are assign to CSO
9X.... are explorers
9HAPP are the Handicap enforcement team (volunteer)

David Units are Detectives

As for Hayward, well, I do monitor them but not as much as Fremont PD. You can say I work for Fremont PD as a volunteer. Happy Listening.

Willie

9133. BART frequ's question

Yahoo group: bayscan (2002-01 — 2002-06)

From: Jim Gammon
Topic: 9133 Message: 9133

Hi. I've had the best luck monitoring BART from the train in a tunnel.
I
live in El Cerrito and being several hundred yards from the Plaza station, I
have to go outside to hear the system on my BC245, most of the time.
However, it's
rock solid inside their tunnels. Jim

No control channel means you can stop messing with the LCN for a while until
you get a better antenna. Now since you have one bar on at least one freq,
you stand a chance of getting a better signal with a better antenna.

Adding the Seneca site won't improve coverage for Tri-Valley. Seneca
is in between 580 and 880, near Golf Links Road. No chance in that
making it over the hill. If they, for some strange reason, were to add
sites to Sunol Ridge, Crane Ridge, or the water tower off Airway
(Sites where Livermore and/or ALCO are) you would hear them.

Really, there is no reason to provide coverage for eastern Alameda
County and eastern Contra Costa since the majority of services are
already trunked or have no need to be. You may run into interference
issues bring Oakland over also. The biggest problem with 800MHz
propagation is the ridgeline dividing Oakland, Hayward, etc from
Tri-Valley.

With the push to narrowband and digital modulation Oakland will
eventually have to do something. Upgrading their system will be just
as costly. Same thing with ALCO, though ALCO is more ready for it.
ALCO could absorb Oakland making it cheaper for Oakland to be
compliant with APCO and whomever else.

Hey man, I think, unless you have an antenna on top of Grizzley Peak, you aren't going to have any luck with Oakland or Richmond. Those systems aren't designed for reception too much beyond the intended reception area boundaries. Best regards, Jim

With EDACS systems you can assign any frequency to any logical channel number but most of the time people go with the base format of having lowest LCNs start with the lowest freqs and work up.

I live down the street from the Dublin BART station and their system can get fuzzy at times. That's with an inside antenna though. Same goes for ALCO with a Moto portable.

You got em' same ones I have. As far as antennas, with 800 I get better reception putting a watson889 on the back on my 780 in the car than the magnetic roof mount, not for VHF, but for 800 its better.

Hi Jim,
I too have noticed that BART does sound better inside tunnels and also at most staions when not on the train but on the platform. I being about a quarter of a mile from the Richmond staion have no problem hearing the system inside.
I wonder have they started testing some of the new trackage from colma to SFIA yet, that well be interesting to hear.

Ben,

Those are the correct frequencies in the proper LCN order (actually in ascending order). I've picked up the control channels on 866.725 (currently), 867.9625, and 868.15.

I guess I'm lucky as I receive BART without any problems in north Mountain View on both my BC-780 and PRO-2053 with 3dB gain 800Mhz HT antennas (with right angle BNC adapters).

BTW, as for your LCN order question, I've listened to some EDACS systems where the LCN order was very random, and there were even some LCN's that were skipped. This was all three sites for Brevard County, Florida where one of the designers of the GWIZ board, originators of AFS, and the EDACS portion of the BC-245xlt lived for a while.

BART has already started testing their radio system at the Colma to So.S.F. stations. Their communication techs are using ID817,818,819. The reason reception for BART in the tunnels and in the underground stations receive so well is because of the low power receivers connected to all the miles of coaxial cable strung along the ceilings with 800mhz antennas. Can anyone confirm ID263,264,265 are Train Control channels? I have heard nothing on ID001 thru 009 which are suppose to be Train Ops.

no not dead. picture just a chimney.... The picture an antenna that is compromised of a very long mobile antenna standing straight up with 5 whips coming out of the sides. That's my antenna.. Then pic my roomate mounting the antenna by laying in up against the base of my chimney so the antenna leans against the chimney at a 125 degrees angle. Some of my whips are actually laying on my rof instead of standing straight out in the air...

When you check on-line police scanners, they list Oakland at almost every sight, but when you try it won't load. Has anyone else had this problem? Also you Oakland guys ever consider broadcasting your Oakland scanner, wishful thinking I guess.

WLucas9925@... wrote: 2-19-02

Hey Mike:

Regarding the call sign for Fremont PD....

Fremont is divided in 3 zones:

Zone 1 is composed of Central part of Fremont
Zone 2 is composed of Northern part of Fremont
Zone 3 is composed of Southern part of Fremont

X-ray Unit is the day shift
Ocean Unit is the mid shift
Adam Unit is the swing shift

ie. 1X5 meaning this unit is in Zone 1 and it a day shift unit and the last number is a slot number that are assign to an officer.... there is exactly no meaning of the slot number. And the department is composed of A-side/B-side, there is no meaning to this.. just how they have it.

Other things you may hear are:

T Unit - Traffic unit
any slot number that ends in 21 or 22 are assign to CSO
9X.... are explorers
9HAPP are the Handicap enforcement team (volunteer)

David Units are Detectives

As for Hayward, well, I do monitor them but not as much as Fremont PD. You can say I work for Fremont PD as a volunteer. Happy Listening.

Willie

This blocking stuff isn't a NOTAM, it's just an informal agreement with
Center to allow free-flight within an altitude block typically 1-2k ft;
otherwise they'd have to check in with ~8 sectors just to do one
circuit of the bay :-)

Topic: 9168 Message: 9188

I doubt it would be Livermore, though the airport can handle some large jets. Ken Behring has a rather large private jet parked there (initials KHB I think). At one time it said Seattle Seahawks when he was part owner. Some Korean company runs cargo jets out of Livermore as well.

Looking at the photo, I've always wondered why the couldn't get an escalator or something instead of those cheesy steps. I think it was Bush Sr. who nearly tumbled down the stairs once. [Hard to believe, but running down the AF1 steps was the one place Gerald Ford didn't stumble!]

9189. BNC connector on BC245

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-02-21 05:32:23 UTC
From: Jim Gammon
Topic: 9189 Message: 9189

Does anyone here have experience changing out the BNC connector on a BC245? I am beginning to get some break up on mine and unfortunately it's not from the antenna, it's in the connector on the radio. Just wondering how difficult it is to get at and if there are a lot of parts in close proximity making soldering difficult.
If it proves difficult, does anyone have any experiences with Uniden service, like is their turn around time quick prices, etc. Thanks for any info. Jim

Typically it is not the BNC itself, but the connector loosens then the center wire either snaps or gets intermittent. You generally don't need any parts. I've had this happen a few times, which is why I emphasize flexible antenna like the RH77 which doesn't stress the scanner. Some people use two 90 degree elbows in series between the scanner and the antenna to relieve the stress on the BNC.

I've repaired a ham radio and scanner for the same problem. It is moderately difficult to do, but not impossible. I think Glen at Scanners Ulimited would do it, but a good local repair shop could also make the repair. [FYI, Glen has done lots of tweaks on radios when you could modify scanners, so he has the equipment.]

I don't think the steps are transported. I'd expect the stairs to be provided by the landing field or a nearby air force base. If the current steps are transported, an escalator would be very heavy, need a power source, and be subject to reliability issues.

Mountain View Fire working a structure fire at 877 Heatherstone (near Bernardo/Sunnyvale city limit) Kitchen fire with possible extension into attic. Fire Attack crews pulled out a victim but have already declared him 10-55 (DOA) . They Special called 2 additional Engines for a total of 5 plus the Truck and Rescue (why the IC didn't simply pull a 2nd alarm ??) anyway, they have Engine 1,2,3,4 and 6(on coming shift) Truck 1 , Rescue 1 Battalion 18 and an IDT team plus investigator on scene. Secondary search is neg. They now say attic is clear of any fire. Mountain View Fire 154.025

CDF Tac 1 is 151.145. This frequency is also used in
some areas by Park and Recreation Districts. There is
no tone for Tac channels and they are not repeatered.
Just lock the frequency out. If you are hearing other
agencies on it locally then CDF shouldn't be using it
in your area. It should only be used in areas where
there is no interference to other users.

Howdy all... I'm looking for any ambulance frequencies anyone may have for the Bay Area, Sunnyvale, etc. I know AMR North is dispatched on Alameda County Trunked. How about AMR in Sunnyvale? Are they purely on Control 91 (856.4375)? Do they have a 'private' frequency to talk from 'car-to-car'?
Also looking for Westmed, and any other frequencies you people may have. :)

Thanks.

ObFreq: Control 91 (Ambulance dispatch) 856.4375
Control-92 (Ambulance to hospital): 857.4375.

Evan

9202. Moffett is hopping... ;)

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-02-21 19:16:26 UTC
From: b52hbuff@att.net
Topic: 9202 Message: 9202

The Honorable Vice President Richard Cheney landed at Moffett Field at 10am this morning. The security detail was different than I've seen before the SCCSO was providing units near the light rail system, and other perimeter areas.

There wasn't as much CHP presence as has been noted during POTUS visits.

The other difference is that there seems to be a 'heightened' sense of security revolving around the airplane (B-757 90004), and the field. During the old POTUS visits, once the POTUS left the field, the field support personnel seemed to go back to some state of normalcy. During this visit, the system is hopping even one hour after the landing.

Anyway, more information on Moffett/Ames system at: www.trunkedradio.net

More information at: http://www.kcbs.com/pages/kcbs/news/news_story.nsp?story_id=27950340&&ID=kcbs&scategory=Computers

I have a couple of RH77s, but it's a little 'large' for
daily use. If you've got the signal strength, try a
Diamond RH-519. I find it does a pretty good job
in 'signal rich' Bay Area...

What is your fascination on the topic? I am amazed that
you cannot answer your own question from the picture.

On the side of the stairs, it says:
"144th Fighter Wing
California
Air National Guard"

So can anyone else onthe list care to guess where the
stairs came from?

I remember hearing that the VC-25s have built in steps
for use in facilities that do not have stairs. Given
the weight restrictions on airplanes, it goes without
saying (execpt for perhaps some of the slower ones on
the list) that the aircraft's built in stairs are not
going to be as sturdy as the stairs provided by a local
facility.

Motorcade is 10minutes out. So SJ's participation is
over. The Honorable Richard Cheney is early, unlike
his POTUS predecessor who was habitually late.

It is the best system. Why weigh down the plane with
something that is going to be used infrequently? (Like
I'm sure they took the Bible's off AF1 during the last
administration. ;)

More interesting activity. They're running folks off of
the perimiter of the field. I think their 'victim' was
at Manila and H street.

Wheels up...

He's gone...

The VC-25 does have a set of stairs.
http://www.globalsecurity.org/military/systems/aircraft/v
c-25-pics.htm

If you can't read the pictures, then look here:
http://home.att.net/~jendonrein/vc25.html

Check out second paragraph under 'Features'.

Or 'from the source':
http://www.boeing.com/defense-
space/military/af1/index.htm

As for AF2/VC-32A:
http://www.boeing.com/defense-space/military/c-
32a/index.htm

No mention of stair modification.

AF2 on 127.45...

9215. HELP! Need public transit frequencies!

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-02-21 23:07:08 UTC
From: Mike Mocha
Topic: 9205 Message: 9215

Hey all. I haven't posted here in a while. Anyway, I was wondering if someone could please post a list of known good frequencies for the following public transit agencies.

SamTrans
Golden Gate Transit
AC Transit
County Connection

I think I've seen one or two frequencies for these agencies before but I can't remember where, and when I listened to them there wasn't any traffic. Are these guys all digital or Nextel style now?

Thanks,
Moc

Well, I have Cal Train as 160.815. It worked several years ago when I was down that way.
The main road channel for Amtrak in the Oakland area as listed between Elm Hearst and the I Street bridge is channel 46, 160.800.
I still hear stuff, when I listen, on AC transit frequ's of 490.4625, 493.4625 div 1? 490.5125 493.5125 Div 6?? 490.6125 Supervisors and maintenance 490.6625 493.6625 div 2 and 3// 490.7625 493.7625 equipment maintenance?? The buses respond back on the 493 frequ's and radios seem pretty short range. If you check them out and find new or different stuff, please advise. Thanks, Jim

Hey Moc,
yep, still hanging around here, good to see you on too. Here is what I
have for AC Transit:
Bus Div. 1 493.4625 490.4625R PL173.8
Bus Data 493.5625 490.5625R PL173.8
Bus Div. 2 493.6625 490.6625R PL173.8
Bus Supv. Maint. 493.6125 490.6125 PL173.9
Buses BART&Livermore 493.7125 490.7125R PL173.8 (don't kow if still active)
Buses SF&Marin 493.7625 490.7625R PL 173.8 (dont' kow if still active)
Transit Police is handled by Contra Costa SO's and Alameda Co. SO's Hope
this kind of helps. good scanning.

Dear ARES Members:

One very important piece of information missing from our Registration Form is a name and phone number for us to use in the event we have to contact a member of your family in an emergency involving you in the field, or to notify them of changes in your plans. Would each of you e-mail me with a name, address, and phone number(s) to use in case of an emergency.

Hopefully we will never need this information, but better to have it and never need it than to need it and not have it.

73, Lou

How is that possible? Using the PL tones in a scanner just like you normally would in a 2-way radio should not create bleed over. I'm sure Stockton Fire is not getting bleed over from Miliptas and Milipitas is not getting bleed over from Stockton. Unless of course, the recieve circuitry in both the scanner and 2-way radio are different.

Go into the System Setup in the menu and make sure the
mode is set for tone. otherwise NO PL's work.

Try activating the attenuator (I believe the 780 has an Attenuation
feature). Use that, along with the PL and see if it helps.

With the BC-780XLT you have to enable the PL mode.
There are 3, no tone, tone and tone search. Even if
you have programmed the PL's you have to enable tham
in the System Menu

Anyone happen to catch this on the KTVU2 news last night? A search is being conducted in San Ramon and surrounding areas. A command post was set up at San Ramon community center parking lot..Last night they were using the Coco county sheriff helo and a National guard Blackhawk.The Boy left a suicide note in his locker at school. I listened to San Ramon last night around 10:00p.m. after seeing the report, but heard no comms. any idea what freqs they might be using for this Search mission? What freqs would the Blachawk have been communicating with san ramon on??

San Ramon and Danville PDs are Sheriff contracts... they use 155.250 for primary dispatch, 155.790 (tac-2) and 155.040 (tac-4) for secondary operations. Search and Rescue was using tac-4 for primary operations... but because of the media attention, many residents are calling in sightings, which are dispatched on the primary frequency. San Ramon Units are 25 series, and search and Rescue are the 1R100 series. Danville Officers which are the 21 series haven't been directly involved in this incident since the first day. Victor units are associated with the County Office of Emergency Services, which oversees the Search and Rescue Unit.
25A1 is San Ramon Chief, 25A2 is admin Sergeant.
25W(1-4) are patrol sergeants
25X(1-7) are dayshift patrol units
25Y(1-7) are swing patrol units
25Z(1-7) are graveyard patrol units
25Q(1-8) are Police Service Technicians
25T(7,8,09 are traffic units.
25(ida) units are detectives.

IF you are running the recieve PL you would ONLY hear
the transmission of the repeater transmitting that
sub-audible tone. If you are NOT running the receive
PL then you would hear whatever was transmitted within
your receiving range.

IF you are running the recieve PL you would ONLY hear
the transmission of the repeater transmitting that
sub-audible tone. If you are NOT running the receive
PL then you would hear whatever was transmitted within
your receiving range.

The last time I tried about a year ago it was digital.

LLNL has a somewhat secluded spot in the hills called site 300 (hopefully I have the number right). They test high explosives that are used to trigger nuclear explosions. It has a repeater system as well, though not in Kelty's book. All I heard was digital there as well.

Site 300 is not really a secret. If you look hard enough you can find downloadable videos from the site. It has been the source of a few UFO reports.

Yes, all Lab Ops are on the system and are digital. The system does not support analog whatsoever and I've verified this. Fire, PSOs, Transit, maintenance, etc. The PSOs are encrypted all the time save for going into the clear and doing roll calls. Much of the traffic is limited to the main site which doesn't have the best coverage outside of the City of Livermore. I get it faintly here in Dublin and certain parts of Pleasanton.

The main site (Site 1,2) is a 10 channel site, Site 300 (Site 3,4) is five to seven I think. You'll only get that site if you are near the area. There are three other sites, Crane Ridge (Site 7) which is two channels, and Mount Diablo (Site 5) which is one channel using "Voice On Control." There has been another site added for what seems east of the Lab but I haven't checked it out yet. Coverage for this system is real strict and many talkgroups are denied usage of sites other than the main. The DOE which I believe is the manager of the system had at one time wanted to get the Fed agencies in the area on the system but I haven't caught any traffic of the kind. Also, you'll notice the two main sites have two site ids; these are for backup. They can shut the site down and roll over to the other backup site. This is a rather well built system and highly redundant.

Does Kelty's book have any talkgroups in it regarding LLNL?

Wayne

LLNL and LBNL are quite different. LBNL, for one, is not set up to perform any classified work. So their comsec procedures would likely be quite different . . .

My federal book is a bit old, but there are no talk groups in it.

Site 300 has a small arms range. If you hang out there a while, well, the arms sure don't sound small. If you were good with a dirt bike, you could probably snoop on the site from the hills in the Carnegie off-road park nearby. The repeater can be heard from the main road.

The waypoint I took for LLNL site 300 (either where I parked or the main gate) is
N37 37 59.0 W121 30 11.8 You take Corral Hollow Road west from I580.

Their website is still up:
http://www.llnl.gov/site300/

It looks like some of the links have been removed post 911, but the site 300 training manual is still on-line:
http://www-training.llnl.gov/wbt/hc/HS0095W/

This web site says the area is slightly radioactive:

For sure , 155.88 is TAC 5 not Command 5 , 153.83 is TAC 6 , it is also known as county yellow AND in some other areas the OLD White 4.
153.965 is Santa Clara City Fire (main dispatch) which is a similcast with its 800 system. and
453.075 is High Rise TAC A , 453.125 is High Rise TAC B
the P/L for SJFD Dispatch is 173.8 , pretty sure. same for Command 3 and Command 4.

thanks...

155.985- Always get people's answering machines or intercom on this one but I know it's supposed to be a fire freq for someone

453.1250- sounds like intercom for a hospital. supposed to be sjfd high rise tac b

154.445- I know it's a yolo county fd freq.. I thought i was their disp because of what i hear but when I put the pl tone in I get nothing. When I take it off everything comes through..

I can't hear San jose fd or Napa to save my life. I don't know why.. I pick up stuff a lot farther away then those to so i should be getting them...

9284. 154.160 OES

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-02-23 23:08:21 UTC
From: robert sanford
Topic: 9284 Message: 9284

Check out the communications on 154.160 on OES frequency to my knowledge..
It sounds really weird like its coming via sideband on HF or something..

I will post it later on my site so others can listen and tell me what you
think.
It seems like it must be some sort of long distance patch using HF for the
relay.

Maybe someone on the list knows.

Robert

The OES Fire network has both VHF-Hi and VHF-Lo inputs to each
repeater. When a station is activated and attached to the micorwave
link, users will hear the repetative "confidence tone" (the beeps).

If the lowband skip is in, the out-of-area audio will be passed
through the system. This situation will continue for a time while
a new control system is designed an implements for the network.

[When Robert gets his audio posted, I'll be able to confirm if
this is what he was hearing earlier.]

No, what you might be hearing is a dispatch for a department in East Smalltown, West Virginia, who operates on 33.66 or 33.98 MHz. The skip happens to be in, and they are keying (or getting passed through) our system.

(with 75 base stations statewide, the conversion to VHF-Hi is a slow process...)

I hear this once and a while on the State's 153.755. Someone issues the DTMF for link control and all of a sudden off the wall transmissions start coming through (Like CHP or something). Are there any details on how the State runs this patching network anywhere? It sounds real interesting and I'd love to hear more about how it works. I've heard a little about it and what it is capable but maybe you, Don or anyone else, have more info on it. Thanks.

Well, in a nut shell, the OES Mutual Aid Coordination repeater networks (CESRS, CLERS, and OES Fire) are all interconnected via the State's microwave system.

The traffic you are hearing on 153.755 is most likely L.A. County Sheriff's traffic hitting our repeater in the L.A. area (an on-site mix getting into the receiver) when that relay is connected to the relay east of Sacramento (late in the afternoon, right?).

That is a separate problem from the skip impacting the Fire network.

Yep. That's the east coast skip, and somehow it has turned on two
repeaters (probably Mt. Diablo and one other one further south in the
Coastal range).

It was around 6 or 7am. Heard the DTMF, then a few nice solid
transmissions and then several minutes later they dropped the link and
all was quiet. I seem to vaguely recall someone (Female Dispatcher?)
asking for a radio check, a bit of chatter, and then it ended.

So you're saying only the State MA stuff can be patched together? You
can't link up a CHP Dispatch to State P&R Pink for example? I know
it's all basically on the same microwave network. I was also told that
you could control CHP links from 153.755. That that freq is used for
MW link control and multiple dispatch channels could be linked. I'll
have to ask again; the info came from a former State radio tech in San
Diego.

While the State has one Public Safety microwave network, the channels
are partitioned by user (CHP, CDF, OES, CalTrans, etc.). Within the
OES segment we have the three networks; so yes, only the OES Mutual
Aid administrative systems can be interconnected through the microwave.

It would have been 0700 and it was the Warning Controller doing the daily Morning Radio Check on the OES Fire Radio System. (OES 1 and OES 2).

What the other stuff was is skip from the East Coast. As Don, said in his earlier post, with the low-band inputs we get skip from the east coast sometimes. OES does not "Dispatch" equipment on these 2 frequencies. They are used primarily as a back up to the phones for contacting the 6 regional ECC's and to talk to our Chief Officers when they are on incidents. The Warning Center at OES does the daily radio checks because they are staffed 24/7/365. The Fire ECC is only staffed during incidents. The rest of my time is spent doing Administrative work. (Don't choke Don, this is in public and I am behaving).

9310. Sunday Morning OES Radio Test

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-02-24 18:40:58 UTC
From: robert sanford
Topic: 9310 Message: 9310

I recorded the Sunday morning radio test of the OES system on 154.220 today
which occurs at 10:00 am if anyone wants to monitor it sometime.

I posted it on my page at:

http://bayscan1.50megs.com/

I guess this would be a good frequency to monitor if we have a BIG ONE.
I assume the dial tones and keypad tones are the operator switching between
different links??

Robert

I don't know what Glen is up to, but the 785 was going to be in the $350 price range, maybe a bit more. It should cost what the 780 cost when it was new.

I really don't see the point of putting your money down this early on the 250D. You are always better off waiting a few months to let them get the bugs out of the product.

My 245 has the 5 second delay between banks because I bought it too soon. Not to mention the display was defective and I had to convince Glen to let me swap radios.

There is no assurance that the digital decoder will be on the market at the same time as the 250/785 are released. The decoder will come from another company and will be in the $300 price range.

I would say you should buy the 250/785 on day one only if you have no trucking capable scanners already.

I would agree with Gary on all points except Uniden answered me when I asked them some questions re: digital scanners in which she said that the scanners and the digital card would be out Sept/Oct. I already read on this page that SFPD is changing their digital FREQ to encrypted when the digital scanners hit the market. So what do you need a digital scanner for? Only Santa Clara Sheriffs chan. 3 is digital. Not much in the bay area for it, at least not right now. I do like the idea of a HH version of the BC780 however, but not for getting digital.

The deal with the digital card is the Uniden DOESN't make it. The group that did most of the design work on the 235/245/780 felt they didn't make enough money from Uniden so they insisted that they make and sell the astro card directly. I'm sure Uniden is helping them, but there is no track record for this new group selling the card. That is why I suspect the digital card will not be out on time. [BTW, I talked to an Uniden engineer on the project as CES, not Uniden directly. Hard to tell who would have the better information. People close to the project often are right on features but wrong on delivery times.]

The 785 shown at CES was a real hack job. [I suspect it was hollow inside as it was very light.] No 250 was even displayed, so you need to wonder if the 785 will come out first, then the 250. Note that the alphanumeric version of the 245 never made it to market, even though Jake and I saw the box at CES.

Does Glen give a firm price, or does your deposit just insure you a place in line?

I've used a standard scanner to check out those Astro freqs for Travis, and there's quite a bit of voice traffic that I can pick up without any trouble. But because it's Astro, the scanners currently out won't handle it. I'm going to wait maybe until next year before I make a purchase, mainly because of the firmware issue; let them work out most of the bugs first.

I still say what they are doing is selling more units. I for one would
gladly give up listening to the few PD's that can even afford a new digital
encrypted system . If they would just add more banks to a thousand channel
rig that would be worthwhile.At 01:59 PM 2/24/2002, you wrote:

Gary makes a few more good points. I asked the lady at Uniden if the 785 or 250 would pick up 700mhz (considering the rumor CHP will move there in the future for metro areas) Her answer said it ran from 25-1300 , 1000 channels. The Press release says 1100 channels, and yes, the 780 also runs 25-1300 BUT not continuous, it doesn't get 700 and of course it doesn't get cell phones, so I expect the 785 may not get 700mhz either.
As far as Scanners Unlimited, I put down $50.00 on my first 780 and yes it held the price for me. I would expect he would do the same. I recently asked him how many 780s he sold, he figured nearly 2000 , he is one happy camper with that, I don't expect the 785s will do as well, but I would be the 250 will be a good seller. Despite the fact that I have a Pro 93 I would probably buy a 250.

Yes - to back up Gary's remark on the 785...
Year 2000 CES Uniden had a cardboard cutout of the 780 sitting on the grand pedestal. I was so excited until I went right up to it and realized it was cardboard. However, they did have literature on the 780 available for handout. It wasn't until CES 2001 that a working model was displayed. Now CES 2002 had the 785 on display. What was it? A 780 shell, completely empty inside, and on the back was a king size PCMCIA looking kind of slot where the Astro card would go. I picked up the box, peeled back the rubber lining around the opening and sure enough, looked like a little jigsaw cut a rectangle out. So the 785 is the exact exterior as the 780 with a card slot in the back. No literature on it either.

And nothing at all on the 250. Disappointed. Had to lug my cameras and such all day in hopes of getting some good pics. Oh well.

Hi Ed,

I agree there's not too much in the Bay Area in regards to digital. As a matter of fact, I probably won't even buy the digital card needed to receive digital signals. Here's my reasons for buying the 250D....
1) Handheld.
2)Multi-trunked.
3)Toned (PL capable).
4)Computer controlled.
5)Alpha/numeric tagging.
6)Wide band receive.
7)Uniden has proven their ability to make all this in the 780XLT desktop so I'm banking they will come through with the 250D.

The $50 puts me "in line" for the scanner. I think he said I am
number 22 which would be in the first shipment.

I would agree with all your reasons. Although I have a pro 93 , I also have a pair of 780s. So I know just how good the 780s are. I wonder if they can get two lines of alpha numeric displays on the HH, I guess they can. One of the things that really spoils me in regard to the 780 is the backlighting, you can't beat it for a bedside scanner, don't got to turn any other lights on, if you are lucky to have someone next to you (;-(I usually don't, and when I do , I leave the scanner OFF, for good reasons LOL) then you don't bother her (if you got an earphone anyway) But the scanner has lots of other good points as well. Besides I am going to switch my 93 with my nephews 245 (he could use alpha numerics more than me) and sell his 245 .

Gary, I'd sure like to email the Uniden engineer about accessibility issues, to ensure that someone can use the new scanners as much as possible independent of having to look at the display for all information. Submenus can be a real drag to figure out if you can't see the display! I'm sick of manufacturers excuse for saying something is ACCESSIBLE by having keypad beeps! I mean they help, but sure aren't much! Jim

9341. old NAWAS Net in Redding area, circa 1989

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-02-26 02:00:50 UTC
From: N6URU / Harry
Topic: 9341 Message: 9341

Don or anyone..

Speaking of 161.68, back around 1988-89 when I lived in Redding I would hear a nightly NAWAS "roll call" of west coast stations on about 161.69. Same frequency on two scanners with different IF's, so it didn't seem to be an image. It came in pretty strong all around Redding...never listened for it from farther out, and went on for a year or more. Most stations were County OES offices as I recall, but also some military, dams in the northwest, etc. I got the impression it was coming from somewhere in Colorado.

Does any of this ring any proverbial bells with you? Would that frequency be a fluke? Does anyone else on here remember that? How many Frenchmen can't be wrong?

Harry

they pretty much re-use the same set of frequencies, both 151 & 159 Mhz, around the state for either dispatch or tactical, using distance and tones to avoid interference

What you describe is one of the thrice-daily tests of NAWAS by the
FEMA National Warning Center (then co-located in NORAD HQ in Colorado).

For those who don't know what we are chatting about, the NAWAS
(NAtional WArning System) is a number of "junkyard" type telephone
circuits provided by FEMA. There is a National Admin circuit, a FEMA
Regional circuit for each of the 10 FEMA Regions, and a State circuit
in each of the 50 states; during the system tests, the circuits at the
Regional level and above are tied together.

Prior to a rebuild in about 1990, the system was 'tiered', in that
everybody in CA could hear what was being said on the FEMA Region 9
circuit, but CA traffic would stay on the CA net. Since the rebuild,
unless the curcuits are specifically bridged, the traffic stays on
each circuit.

This is the first I've ever heard of a live radio broadcast of the
net. Sounds like someone in Shasta County wanted to be able to hear
the circuit away from the Comm Center and had their drop hooked to a
transmitter.

Don

Ben,

No dumb questions. Although some act like it, none of
us were born with this information.

Tac Channels: Used on an incident to conduct
OPERATIONS

Command Channels: Used for communications from Command
staff to ECC. This could be anything from logistics
(lunch count) to requesting more equipment.

Local Net Channels: Used for the day-to-day operations
of a CDF Unit. This includes dispatching equipment to
calls, tracking Crews on assignment, and the general
business of the Unit.

The easiest way to listen to ALL of CDF is to load the
151.xxx frequencies with NO pl tones and scan away.
(Ok for NEU east use 154.130 on tone 3 136.5). That
way no matter how the frequency is being utilized,
you'll hear it.

Tim
(the above are generalizations to give the guy an
idea. So don't get anal.)

Topic: 9284 Message: 9348

sounds good.. a couple weeks back I saw a webpage with a cdf layout.. It had
i think 174 frequencies for the whole state.. i guess i'm assuming that
would be 20 freq's with a lot of pl's and whatever cdf air ops feqs also

hey ben give me another two or three days I am doing the entire C.D.F.
statewide with tones for andys spread sheet I'll let you know when I put
it
in my groups files!!!!!!!!!!!

Jeff, please lose the Caps Lock. It's rude.

The reason no frequencies are posted is the system is a -> telephone
system, not radio. And being a National Defense Communications system,
I suspect it is a violation of at least a couple of USC sections to
broadcast the net on an open radio channel.

Don

Jeff - Tim calls many people studs. I suggest not going there with him... ;)

I give up - here is a sneak peak for CDF VHFo-hi grid. This grid
design is exclusive to NorCalScan.org and will be one of the many
cool , exclusive things with the new website coming up very shortly.
And Tim - am I a color stud now that I fixed that ugly pea green
soup? I saw what you mean - bleh.

http://www.norcalscan.org/sneakpeak/cdfradiogrid.html

Jake,

The color is much better. As for the stud thing, I
will reserve judgement on that till I visit with Kim.
However, it's NOT looking good.

you were right. Personal file number. Since crooks use aliases, PFNs are used to identify individuals. Like a license plate for anyone with any record in the CA system. Career crooks often know their own PFNs. Searching by PFN brings up all the aliases that person has been known to use.

No felonies required. Every dispatcher, every officer, every individual
who ever interfaces with the CA Law Enforcement system has a PFN. When
a female officer marries and changes her name, for example, she is still
ID'd by her PFN, just like a felon with an alias. :-)

What's wrong with using a computer for programming? I'd trust that
voice recognition much better than what Uniden would throw in. Use
like Excel and Andy's 780 programming software for example.

Though not convenient for on the fly programming but I'm used to being
tied to a laptop for commercial radio programming.

Wayne

P.F.N # Is a local id system for people that have been arrested in Santa Clara County thru the countywide CJIC system not statewide. PFN # is a 3 letter/number combo example ABC123, Alameda Co uses something similar for there local arrest only they call them PFN # also happy scanning Mike

Nope, I live in a nice low crime neighborhood.....East Palo Alto LOL
But my girlfriend is in district William, I looked up where most sex offenders live in the bay area, and 95127 is loaded with them YIKES. Glad she owns a 38 !

No, you have it backwards. The synthesizer would be able to speak what you program into the databanks, not recognize your voice. Uniden thinks that just pre-programming a voice for each button is not sufficient. I think most visually impaired users would be plenty happy just to have it read back the buttons.

9388. CHP Crackdown on I-5 and I-80

I never saw the CHP using Camaro's before has anyone??

Slow Down! CHP Crackdown on I-5 and I-80
2/26/02

SACRAMENTO (AP)--For the first time in the California Highway Patrol's history, its three top commanders plan to personally issue citations to reckless big-rig drivers Tuesday to dramatize a crackdown on dangerous truckers.

CHP Commissioner D.O. "Spike" Helmick, along with Deputy Commissioner Alex Jones and Assistant Commissioner Manny Padilla, plan to spend several hours riding with some of the 35 officers who will be targeting truckers in the Central Valley all day Tuesday.

Additional officers will conduct a similar crackdown in the San Francisco area, with both groups concentrating on Interstates 5 and 80, spokesman Tom Marshall said Monday.
Motorists who drive poorly around trucks also will be stopped.

The media event is to publicize an effort that began last summer, when Helmick first promised to step up enforcement as the number of truck-related accidents and fatalities rose even though the number of CHP citations fell by 10 percent over the previous year.

The Sept. 11 terrorist attacks sidetracked that effort, which is now getting underway again financed in part by a $1.3 million federal grant.

Helmick said the stepped-up enforcement will last at least through April. Besides the CHP's familiar black and white cruisers, the highway patrol will use 70 speedy white Chevrolet Camaros designed to blend into traffic so they are more difficult for truckers to recognize.

Police will be looking for truckers who speed, follow too closely, make unsafe lane changes and turns, or exhibit signs of fatigue or drunken driving. Motorists who travel in truckers' blind spots or cut trucks off in traffic may also be stopped.

"These clowns just won't slow down. There is not a day that goes by that we don't have a truck-involved crash," Helmick said earlier this month.

Professional truckers objected to Helmick's "clown" characterization as tainting even safe truck drivers, but have supported efforts to rein in bad drivers.

"Not only is Spike not only not going to back down, he's going to personally lead the charge," Marshall said. "He said, 'What do I have to do, write the tickets myself?"'

Using the word "clowns" wasn't too bright. That phase should apply to ALL the "clowns" who drive like idiots, trucks, cars, motorcycles, it shouldn't be fixed to one type of vehicle. I remember them using Mustangs too.

They had some back in the early 90's. One of the problems they had up here was making U-turns in the median and ripping the ground effect body work off of them. But, the Feds give you a million dollars.....go buy Camaros......we all know how fast those big rigs can move.

They also have or had marked standard black-and-white Camaros, of 2001 and 1992 vintages. Photographs can be found at http://fp3.antelecom.net/taria/capdcars2/chp/CHPpursuitcars.htm

I would assume the 1992 cars have all been retired by now, along with the 'Stangs, but the 2001s may be floating around somewhere.

Other Bay Area agencies that I know use Camaros include the Richmond Police Department, which has about 5 marked late-90s Z28s for pursuit and speed enforcement. Any others?

travis

There's a (hopefully) slight chance that a slipping chunk of Hawaii could slide into the ocean and create a tsunami that could endanger the California coast, among other continents. Link is below. (Noah, are you around? Still have that Ark?)

Let's all remember to read the last paragraph before
we move to the top of Mt Shasta.

But Ward, and other scientists, caution that the
tsunami risk is MINUSCULE: No such tsunamis of this
type have taken place in recorded history. The last
such wave of which there is evidence occurred in
Hawaii an estimated 200,000 years ago, he said.

No you guys. It's nothing to remember buttons! How do you think a blind person types on a computer. Though actually, as I am typing, it is repeating each letter back as I type it. I can also turn off that function but you can catch your typos pretty quick if you have it echo each key stroke.
About the scanner, what I really want is speech output of the LCD! Like if I am doing a band search and the box stops on a frequency, it would sure be nice to press a key and have it speak the frequency. My current method is to store the frequency in a known channel then ask someone to read the display later. Programming in frequ's from the keypad is no problem. The real difficulties arise when you get in to trunking stuff. Here again, I have to have a sighted person read out talk groups. I can write them in a portable notetaker for future reference so it's possible to power up the scanner go in to a trunked mode and punch in a talk group and land on it to monitor a particular frequ. Well, hope this clears up some stuff. 73's,
Jim

The victim in the shooting said to have multiple GSW and is critical.
Breaking news on local channels, San Diego S/O believe they have
found the body of missing Danielle Van Dam , the 7 yr old who has
been missing in the San Diego. SDPD has already booked the neighbor
from 2 doors away, said to have found her blood in his car/van or
house. Parents were Swingers and invited numerous different couples
including the suspect into their home different times.As usual, the
children are the victims. Sad Story.

At around 22:30 a shots fired call went out in Richmond. Actually heard a shot during one of the transmissions. Area of 20th and Barret. Suspect may have tried to rob someone. Unclear who did the shooting, suspect or cop but the bad guy has an automatic. They currently have a parameter set up and H30 is on the way. So if you can listen to the RPD trunked system, tune in now! Jim

Hey Jim,
` I heard the chopper up, I didn 'thear the original call must have been in to the ammy's to much, any way I did tune in to Richmond and they now have one perp in custody, 10-45 C-, (critical condition) they also mentioned a officer form Pittsburg was 10-45 B fair condition, so I don't know if they Pittsburg PD had a chase or if they were serving a warrant.

Guess nobody got this on the scanner, but pretty shocking story:
==========
Suspect and victim in Mt. View shooting used to work together
By the Mercury News

A Mountain View woman who opened the door to a pizza delivery she had not ordered was shot dead Wednesday night by a former employee, who then killed himself, police said.

The suspect, Guyang Matthew Huang, was found dead on a Foster City levee a few hours later.

The unidentified woman was shot more than once while she was talking to the delivery man at her home on Windmill Park Lane around 8:45 p.m., police spokesman Jim Bennett said. Police said the deliveryman witnessed the crime but was not involved in it. The woman's teenage son was also home at the time.

Later that night, Huang's wife called police and told them her husband had just killed his former boss and was planning to commit suicide on a levee near the San Mateo bridge. A witness in the area reported seeing a prone person on a pathway, and it was Huang, shot dead with a single bullet to the head.

Police said Huang and the victim had worked together at a pharmaceutical company.

I've seen the "commercial" Cameros at the the Morgan Hill and Cottonwood Truck scales. They're parked in the "Alert 5 " standby mode. Everyone once in awhile I'll see a camero out on the highways. As I say the Officers are "Tendeing their sheep". Ed is right. There are alot of bad drivers out there. It's not all the truckers fault. The 18,000 pound truck couldn't slow down enough not to run over that 2,000 pound volkswagen that just cut him off to get off the freeway. <<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<>>>>>>>>>>>>>>>>>>>>>>>>>>>>>> Paul Young-KF6YYI 145.350 - 88.5 Lat:38.42.58 Lon:122.66.65 USCGAUX (http://www.cgaux.org/) : Oyster Point Mobile 11 IPN (http://www.incidentpage.net/) - SF0 002 NWSS (http://www.wrh.noaa.gov/Monterey/spotter.html) - SO 10 "If the light is green...the trap is clean!" OT, Allen - or anyone who's been there lately..

I understand the SF Maritime Museum has a period "radio room" exhibit? What do they have there? I've been contacted by the people developing the LAPD Historical Society museum, and wonder if this place there might be worth a visit for some ideas on a communications-related display. I may be in the city over the weekend.

A machine gun, huh? I doubt it.

Probably the reportee meant to distinguish a pistol from a revolver, and
didn't know what he was saying. SFPD uses the terms "9mm" and ".38" to make
the distinction regardless of the actual cartridge dimensions.

"Automatic" is one of those words . . .

Don't forget that "ACP" means literally "Automatic Colt Pistol" and the
1911 is no machine gun . . .

Well, sorry but I can't shed any light on this Lester. I just got in on the foot chase and the shots fired part, and of course the H30 stuff. Pretty amazing, that infrared surveilance stuff! And, in response to you guys who remarked in other emails about "automatic" I never said anything about a machine gun, just an automatic. I assume it was just a hand gun. Jim

How quickly everyone forgets that Hayward cop who lost an eye due to automatic (yes automatic) gunfire. Turns out the shooter bought parts at a gun show to convert a weapon from semi-auto to fully automatic. You can't buy anything fully automatic, but you sure can modify weapons to be fully automatic.

Lots of links on the net about converting weapons:

I guess I coulda given a few more details...
It's coming from San Jose, where I live. Haven't heard a callsign or
I would have looked it up at FCC site. Unit numbers? They all seem
to be "R" something or other. Don't hear sirens in background so
probably not AMR. I guess if I listen, long enough, I might figure
it out. OR... I could go to a location they are at and see for
myself.

It tells me you are listening to an image of whatever frequency your
scanner is hearing. Especially since frequncies at 31 MHz are
on even 20 kHz channel spacings (31.680, not 31.685).

I am about a mile from the situation, it may only be 30 minutes or so when the call went out. I was near the McDonalds on East Bayshore when all hell broke loose, code 3 like crazy. Talking about getting East Bay Regional Parks HELO now. Area bordered by Oakwood, Addison, Bay and Garden seems to be the perimeter, although Officers are blocking streets leading to the area from Bay, University and East Bayshore. I doubt they are blocking University, no reason too. What you probably heard is they are blocking streets that run off University, I know this area very well

They had University blocked off earlier this afternoon, over by the Fire Station on Runnymede, down to the MacDonald's on Bay Rd. . I wonder if it's the same caper.

Bundy

I am about a mile from the situation, it may only be 30 minutes or so when the call went out. I was near the McDonalds on East Bayshore when all hell broke loose, code 3 like crazy. Talking about getting East Bay Regional Parks HELO now. Area bordered by Oakwood, Addison, Bay and Garden seems to be the perimeter, although Officers are blocking streets leading to the area from Bay, University and East Bayshore. I doubt they are blocking University, no reason too. What you probably heard is they are blocking streets that run off University, I know this area very well

POLICE OFFICER HIT BY CAR IN EAST PALO ALTO
EAST PALO ALTO (BCN)
Menlo Park fire officials say a police officer was hit by a car this afternoon while pursuing a stolen vehicle on foot off of University Avenue in East Palo Alto.

A fire protection district spokesman said the East Palo Alto officer, who was hit around 3:45 p.m. today at Cooley Avenue and Runnymede Street near a fire station, suffered injuries to his arm and leg, and was taken to Stanford Hospital for treatment.

Fire officials did not have further information on the officer's condition.

The suspect in the vehicle theft is still at large, according to the fire spokesman, and officers are still at the scene of the incident

I live on the west side of SF. Can't hear EPA from here. Not to mention that when I worked in Menlo Park (the small corner between EPA and the bridge), we had enough rounds fired into our cars that EPA doesn't seem of interest anymore.

Topic: 9451 Message: 9451

Im pretty shocked that Im getting Palo Alto PD on the 488.3875 frequency
now using my ground plane antenna mounted on a mast at the top of my
building which is a good 500 feet above sea level.
I didn't think I would get a 488 MHz frequency from that distance.

There is a little "white noise" on the frequency but its more then readable.

I hear they are doing a roll call now for all the units involved with this
incident.

Gary and others. Last night, they did their house by house search on Addison starting with 2248 working up the street. About 6am this morning, the homeowner at 2242 called saying someone was in his house, They were still numerous units in the area/perimeter. This house was ONE away from the perimeter. They surrounded it immediately and at 6:20am announced he was in custody.

Thats funny Bob, my brother is an owner/driver for Desoto. I knew what you posted but never thought about mentioning it here. For those who don't know cabbie lingo, When they call out addresses and a driver answers "bingo" it means he is at that address and will take the fare. It gets funny when 6 drivers all yell 'bingo' and the driver try's to figure who is telling the truth and who is a mile away :-)

I meant to say the Dispatcher try to figure it out, its a dog eat dog business and since 9-11 it has become a tough job, not to mention the danger, lots of cabbies have been shot and killed on the job, sometimes for little or no money. My brother who used to work 4 days a week, now works 6-7 to make the same money. Hopefully things will improve. But Bob is right, it can be a funny channel to monitor.

I have a friend, a first rate radio geek, who just comes up on the dispatch channel for City Cab and asks for a cab when he needs one. I don't recommend this, but they don't seem to mind.

Well, it seems to be one source, a Jack in the Sack somewhere possibly a little north of Cutting BLVD. in Richmond. It can be heard north as far as Hilltop. I tried to hear any beats which would indicate another transmitter on the same frequ, but didn't hear any. That's pretty strong for a fast food joint. Jim

Hi Robert. The input should be on 157.650. I have it from somewhere that there is a standard?? 5.26 MHZ split between the input, up from the dispatch frequency. Very few companies use repeaters, and I think a lot of drivers use cell phones to pick up fares on their own. Jim

As I write this message, I am listening on Houston Chronical using real player to hear the space shuttle as it approaches the Hubble Telescope. Does anyone know the currently used ham frequencies where you can hear this stuff without being tied to your computer?
They used to use 145.585 from Moffet field, think it was K6MF, and 147.405 from Mt. Vaca and 147.195 from the Sac area. Well seems that no one is doing this anymore. Seems also like there has beem a progressive drop in this stuff since 9/11. Jim

I have a friend out there who would like to listen in to public safety, etc. stuff; I've got the TRS info for the Livermore system, and the Radio Shack guide lists some older frequencies that look like they really belong to Livermore (154.07, 154.235, etc.). Anyone out there an active listener in that area care to share their tips?

Thanks,

/jordan

When all else fails, resort to the Internet!

Live Audio
http://www.chron.com/content/interactive/space/missions/live/live.ram

Live Video
http://www.chron.com/content/interactive/space/missions/live/livetv.ram

Or course you need the free player:
http://www.real.com/products/player/index.html

It's not as fun as listening in on the scanner, but when all else fails, as
I said.

Scott
N6UUH

PS just do a band scan on the 2meter band. 144.000Mhz to 148.000Mhz.

At 08:41 AM 3/3/2002 -0800, you wrote:

Hmmmm...

I wonder what it was you were hearing, as 33.800 is not a CDF channel,
and there are no users in Calif...

Interesting...
If I search the FCC database by frequency (33.800 on both Gullfoss
and Svartifoss) show no records in CA. Yet when I run the callsigns,
I get what you have there.

I stand corrected.

The FCC Search Site is on the fritz again. I was using it earlier and was getting "no records" for a licensee I KNOW is licensed in California.

Yep. And I submitted a "bug report" to the database manager.

If you had to buy one magazine, I'd suggest Monitoring Times:
http://www.monitoringtimes.com/

I subscribed to it for a while, but found most issues were not very good. Over the years, I've saved a few of the issues. The issue that contained a visit to Cheyene Mountain was a good one.

The article on Area 51 is a classic, though it is obvious they didn't go on site and do any sleuthing:
http://www.grove-ent.com/area51.html
In fact, one problem with scanner magazines is they become a collection of frequency lists, and often the lists come from the net rather than first hand knowledge. Using Area 51 as an example, obvious missing freqs are the VORs. They are on all the time, so not to hard to get the freqs if the author bothered to visit the site. Also, since they have at least a dozen landings a day, it's not to hard to get the tower freq (not published to prevent the base from changing it).

I guess the question is why do you want to read a scanner magazine?

Hi Tim,
Would you post a list of the OES regions and their office locations?

I have the following so far:

OES Region1 ECC, Los Alamitos
OES Region 2 ECC, St Helena

Thanks,

Hubert

From: Jake Hickok
Topic: 9498 Message: 9513

Good evening Gary and the list. On the contrary - Scanning Magazines have great first time articles. For you or I, it would almost be impossible to have a scanning magazine more advanced. But we were beginners once, and we had to find out how things worked somehow. Yes, most everything you can find on the internet about scanning (or any other topic in the world.)

I just started writing a monthly column in Scanning USA (http://www.scanningusa.com) about Hints and Tips. Basically, it takes a topic and puts it into detail and lets the beginner learn, and the advanced pick up some reminders. I've never really enjoyed scanning magazines myself because yes, they turn into frequency lists and most of them are not written by anybody except good ol CUT AND PASTE from the internet. I can vouch for some writers at Scanning USA though as we all volunteer our time to contribute and as I get my monthly article back to me, I read the other articles and they look great. Of course, I don't care about railroad scanning in Canada (I'll never go there to Railroad scan), but the article was good, and some info there reminded me about how parts of the railroad worked here in the states.

So if you're beginning in the hobby, pick up all the magazines you can and get familiar with what is out there in the nation. Then, when you know what scanning is, and all the types of scanning, get on the internet and look up the specialized and localized info. If you're not beginning, more of an advanced scanner user - then magazines aren't really good for NEW info. However, you could easily contribute to those magazines and HELP new hobbyists set foot in this fun radio spectrum.

Magazines I can think of are...
Monitoring Times (nationwide) http://www.monitoringtimes.com/
Scanning USA (North America) http://www.scanningusa.com/
Popular Communications (Scanning and Shortwave)
http://www.popular-communications.com/
CQ (ham radio) http://www.cq-amateur-radio.com/
QST (ham radio) http://www.arrl.net/qst/

There may be more out there but those are the ones I know.

Jake

Well, you can go to Barnes and Noble or Fry's and page through the mags. If something strikes your fancy, buy it. But I don't find the mags have much information that I can't get on the net.

Here in Santa Cruz, if I crank the squelch to zero, I can hear some beeping type noises. Sounds like three different beeping type noises. One is about every second, one is higher pitched and repeats too fast to count, and one sounds rather like a bird call. Very faint and buried underneath a thick layer of static.

9520. NYC Live Scanners???? & West Coast Scanners

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-03-05 02:49:56 UTC
From: Champ
Topic: 9520 Message: 9520

I was just wondering if there was anyone here in these groups that are in NYC and would be able to broadcast the fire ch. and quite possibly the NYPD ch's.

I was just wondering if anyone else found it annoying to have to have 5 windows open at once on thebravest.com . I think it would be nice to see a few of these companies perhaps merge or something. With NYPD.com

Sites included are as follows:

http://thebravest.com/bronx/bronx.htm
http://thebravest.com/queens/queens.htm
http://thebravest.com/brooklyn/brooklyn.htm
http://thebravest.com/manhattan/manhattan.htm
http://www.nypd.com/news.htm

http://www.firedispatch.com/
and maybe something like.... Any suggestions

Great sites, but I think it could do a bit better with maybe one broadcast.

I would think too, that a web site could be made in California that could do the whole state. That would sound like a wicked online scanner site, with all the activity that would happen out there.

If replying from scannorcal , norcalfire, and bayscan yahoogroups. Please reply to me directly. I don't go to those sites too often.

It would be nice to have something more consolidated. In a perfect world that would be nice, but since we are not quite there yet, the links that you have mentioned are pretty good ones to listen to. I use the bravest a lot, and have a friend in CT who when conditions are good and monitor FDNY with an S2 to S3 signal and he's not far from Prov. RI
The TV show "The Bravest" Is also a good show to watch to get a feel for the FDNY and other departments It's great and I appreciate the efforts of the firefighter scanner buffs who us a chance to listen to some real time live stuff in the first place.

Well I posted the chase going on to the list shortly after it started but
for some reason it didn't go through.

Anyway there was a nice chase in San Mateo which I recorded and posted on
my site at:

http://bayscan1.50megs.com/

Its one of the top files.

Thanks for the link. BTW I have been listening to the LVMPD.com site too.
From the sounds it dosen't sound trunked either. Mabey a newer system.
Besides,SFPD was not trunked and their was a scanner "on-line" but when they
went trunked the scanner site disapeared.

Moto systems are actually easily identifiable, you just have to have
either headphones or a quiet environment. At the end of the
transmission is a subaudible disconnect tone. It sounds like a very
low growl for about a second. I have no idea how to put it into words
but if you listen you'll know it when you hear it.

Wayne

Topic: 9559 Message: 9559

So any ideas about the use of 321.0?

I thought it was a command post frequency for Travis?

Is the 194FS deploying aircraft from Travis _and_ Beale?

I can guess from some of the 'local' traffic I can hear
from the SF Bay Area (1.5 hr drive to SUU) that the
194th is deploying to Travis.

My only guess for a Beale assignment comes from the use
of 321.0? Or are they using this as an alternative SUU
CP frequency to not interfere with 349.4?
> 321.0 Bay 11 F-16 194th FS with Alpha 2 status for INS problem, and ETA
> to Travis.

9560. Jumper off the GG Bridge

A jumper just went off mid span of the GG Bridge.
Breathing is verified and the Coast Guard is bringing him into Coast Guard Station Golden Gate.
Marin Fire is responding-46.500
Marin CHP-42.60

Just heard they are doing CPR on him now.

Kevin,

I'm within a few miles of Vacaville State Prison (CMF). I don't know the EXACT group IDs and their uses. I looked back in my noted (and have programmed in the freqs 857 - 860.2625 again).

What I was using at the time was E1P3. The group 000-2 seemed most active, with 400-0 having supervisor usage, 400-4 mentioning the call "Yard" and 400-6 as "Guns". But I might have this all wrong too. On my BC-895 I get them at 2 to 3 bars on the S-Meter.

9562. Re: [bayscan] question

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-03-08 01:51:18 UTC
From: Scott Baldwin
Topic: 9558 Message: 9562

"Trunked" is a radio system that utilizes one frequency as a "Control" channel, and a group of other frequencies that are "pooled" by multiple users. The city of Vacaville has six frequencies. So one is set as "Control", which is rotated among the six frequencies throughout the day. The remaining five frequencies are shared by our dog catcher, police, fire fighter, city corps, ect.

Without getting too technical, the "Trunk Tracker" scanners will help you follow the kind of traffic you want to listen to. In Vacaville, the PD Dispatch has an ID of 208. So with the scanner in trunk mode, I put "208" into the scanner, and I listen only to them. If there are any other ones I want to listen to, I put them in another channel #. You can even put the scanner in search mode while listening to a trunked system. This way, you can learn what the different "channels" are on the system.

Standard scanner users have to lock out the control channel, and end up having to hear everything from the dog catcher, to the sewer workers.

Hope that helps.

That is the 47 foot Motor Life Boat out of Station Golden Gate (just below the North Tower of the Golden Gate Bridge). Here's Their Link USCG Station Golden Gate (http://www.uscg.mil/d11/stagoldengate/) . The Boat was on a training mission off Ocean Beach , San Francisco. They were doing runs into the high surf . Well, They were hit by a wave and got knocked over. Everyone was ok and no injurys. If anyone is wondering the PIC is on the Bayscan Yahoo page.

Scott,

Thanks, that's a great start. I go near the area every 2 weeks
so I don't have a lot of time to monitor.

That's how I build up my info, just make notes on what they say
and eventually you figure out what TGs belong to what areas.

Just a tip to make sure the sizecodes are correct...

Keep in mind that all subfleets which are 0 (zero) are meant to be
fleet-wide. When someone transmits on it it goes out all over the
fleet of 400. I can see this used by supervisors but you typically
shouldn't see heavy activity on a 0 subfleet, unless they broadcast
messages a lot.

Wayne

I'm here outside of Travis AFB. The frequency 321.000 is what the alert fighter squadron out of Travis uses when taking off and landing. They're command post is different than that of the MAW Command. Every time I hear comms on this freq, within minutes a set of F-16's are flying over my house. They coordinate on this freq before pushing to a WADS frequency for "Bigfoot". Then on their way back to land at Travis, they again contact ground on 321.000. \

The listing I have shows the freq as use by SAC Secondary, with 311.000 as the Primary. Though for Travis it's always been 321.000 these fighter jocks come up on.

Thanks for the tip Wayne. I downloaded a file done in Excel that is supposed to help crack the fleep maps. While most of the state prisons I've seen listed are E1P1, that map didn't work for CMF Vacaville. I'd hear a call from a user with one ID, and the reply came from a different ID.

The 000-2 ID is the most used to make broadcasts to yard and towers. I'd think with those users, it could be heavy on 0, though I do confess to not be an expert. The 400 block is hard for me to figure out because there's not a lot of traffic on there at all.

I'll keep an eye on the system using my BC-245 and BC-895. Wish me luck!

I wrote a DOS program that converts the straight decimal codes into
all possible sizecode variations. It's not for the newbie though as it
takes some explaining. It can narrow down the sizecodes though

Scroll down to the very bottom:
http://tricari.home.attbi.com/download.html

I think I recall seeing E1P3 as working best but I'm not sure. They
don't use many groups so it makes it tough.

These State Prisons systems are real low budget systems. They can
actually do type II without problems but I suppose they get the old
type I radios cheaper.

Good luck!

I'll give it a try. The utility I have used is here
http://www.execpc.com/~ghahn/ which is an excel sheet that uses multiple ID
entries to narrow down, and eliminate, sizes.

I know the map for CMF Vacaville isn't E2. The IDs are different between calling unit and responding unit. It appears that E1P3 though as I said, it's hard to figure it out for sure. There's so much traffic from one end of the spectrum, and not enough at the other end, to get an exact lock. I think that's the funnest part of scanning a trunked system where it's NOT E2. It's the hunt that makes it fun =)

cool. didnt know jumpers can survive.
pls ftp the Scanrec file if u made one.

also can u please ask Paul if he can get me a CHP press pass also? (2nd request)

i am also thinking about getting us 'real' by trying to
get us ID cards from the american press asscociation.
i think they are easier to get that state issued ones.
i was thinking of using my 'north bay news" moniker
or maybe even 'baynews video' . We need the kind that hangs
on a long chain around the neck with a photo ID on it,
just like the pro's have.

BTW long time no OWI Dashcam video. You still have the velcro
setup on the dash? Maybe you can shoot some video next
time u are code 3 to a major JOB.

73, mike

9580. Trunk System Deciphering

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-03-08 15:59:24 UTC
From: Scott Baldwin
Topic: 9580 Message: 9580

Hello Group.

With the discussion of the CMF Vacaville Trunk System, I put my scanner back into Mode E2. Then, a radio unit called for Medical Help.

ID # 1 used was 34234

ID #2 responded to the call using ID 33104

The spreadsheet I have automatically eliminates all size codes, except S13 and S14. It gives the following two IDs as possibilities:

000-8

or

400-0

Since this is the only Type 1 system in my receive range, I'm not too sure which way to go now. Looks like it's going to be a custom map?

If you're talking about Vegas Metro PD, they are NOT trunked - it is
a VHF High system. They have about 6 dispatches for different areas
of Vegas (hence Metro, they cover A LOT of ground) and each dispatch
has a dedicated VHF dispatch frequency. Then there is an Information
channel good for all of the city, and numerous tacts and SWAT and
Vice and other fun stuff to listen to.

Jake

>yeah Jim, funny like going to the dentist and having him pull the wrong
>tooth or teeth. No I think they are trunked it just sounds like they

151.220 is the CDF Air-to-Ground frequency. It is no
longer called "Red" it is called "CDF A/G." The use of
this frequency is for the crews on the ground to talk
to the aircraft without interferring with air
Operations which are the 6 Air Tactics Channels.

Topic: 9593 Message: 9593

I have questions about the following frequencies: any help would be much appreciated.
I have 37.10 as CHP emerbency fall back. I also have it as 37.140
Also, all this talk about prisons, I have CHP blue, 42.18, 42.34 listed as prison transportation is that used for such?
I have 39.02 and 39.04 listed as Northern and Southern CA. prison intercom, whatever that means. Are these still used or do they use the 860... trunked system instead.
Thanks for any updates on these frequencies, Jim

9594. Re: [bayscan] Las Vegas,NV

From: Jake Hickok
Topic: 9537 Message: 9594

Hmm - I didn't even think about Clark County Sheriff. From what I
understand, Metro PD just covers all of Clark County so there isn't
really a Sheriff Dept. Not 100% sure on this one, but I never have
looked for them either.

This is confirmed info as of January of 2002.

Vegas Metro PD is VHF High Conventional with some digital encryption on tacts.
North Las Vegas PD is edacs trunked on their own system.
The following agencies are on the Clark County Motorola Trunked System
Clark County FD
Vegas City FD
North Las Vegas FD
Henderson FD
Henderson PD
McCarran Airport operations
Clark County Utilities

Nevada Highway Patrol is on a VHF Smartnet System that the 780xlt can
trunk but the 245 and 895 has problems.

In Mendocino County 151.025(R) belongs to the CA State Parks &
Recreation... 800 band didn't work with all the pine needles and
mountains and stuff; same thing in Humboldt & Del Norte Counties, where
Cal Parks uses 151.01(R).

From what I read, there still may be separate depts, but it indicated both are dispatched from central dispatch center. I was there in 98' and heard a fire alarm call in Las Vegas at a major hotel about a block from where I was staying (I was at the MGM Grand) I watched 4 rigs roll by, they were from Clark County Station 18. I am not sure, to be honest, if they combined or not BUT it show the frequencies under the heading
Las Vegas/Clark County Fire.

Well, for what it's worth, that frequency is NOT in
the 2001 Radio Call Plan Book. However rumor has it
the Stealth Bomber has been heard there.

The frequency 867.5375 is listed as CalStar. However, this frequency is
also being used by CMF Vacaville Prison Transport. I've heard users
calling that they are 97 with "#" 10-15. Response is always "CMF Copies".

I should have posted in my first reply. CMF Vacaville uses the 800Mhz Type-1 trunk system. However, the frequency I mentioned, 867.5375 is not part of that trunk. I've only heard users inbound to the facility on this freq.

Thanks to somebody's excellent military and "not so ordinary
operations" picture taking, we have this picture, taken at the Mather
AFB grounds where OES is holding their emergency operations center.

http://www.norcalscan.org/misc/oes_stealth.jpg

The photographer raced by me in an "unmentionable's" store and
slipped me a manila envelope with this picture as he ran off,
muttering something about camo dudes chasing him. Sure enough, a
couple big guys in camo were running down the street in pursuit and
talking into radios. My frequency counter was pegged at 154.160 and
one of the units seemed to have a callsign similar to 5150. They
seemed to lose track of him in the store. But they hung out in the
store and pretended to shop, I guess waiting for the photographer to
hopefully come back....

Also in the manila envelope was a video from a park taken of wildlife
behavior, and on it was some type of murder....

They never saw me with the envelope ;)

Hi Scott, I'm pretty sure the State would have used a default map
available to the Uniden. These systems aren't really tweaked out so I
don't think they'd go to an off-the-wall fleetmap. Plus, all state
prisons should use the same fleetmap if their logic works the way I've
seen for the State.

Is there any way of divining the map by analyzing data from trunker or treport?

That's what I typically do but Treport won't help you much. Trunker is
much better considering support for Type I.

What I typically do is try and define a range from the Type II ids
that I know are a part of *one* subfleet. Then I use the program I
wrote (H2F), which I posted a link for yesterday, take the lowest
value and have it print all possible sizecode variations, note them,
then use the highest value and look for any sizecodes which yield the
same fleet/subfleet. The thing with using IDs from a Trunktracker is
that they can falsely identify. If you hit search a few times and the
same ID comes up you know it's legit.

I know the higher sizecodes seem like they work but it's mainly
because of how they divide the number up. Less of the value is taken
into account on conversion.

I've worked with Type I systems for a long time and I'd say they're
the toughest to figure out, especially larger systems with custom
maps.

I believe thats CMARS 4 . Its a multi user state repeater system.
They also use it at Napa State Hospital Maint.

9621. Livermore this weekend?

If the Livermore Flea Market is on this weekend, is anyone here going?
There are a couple items from Bob Kelty that I'd like someone to get for
me if he's there. Please contact me offlist at marnells@...
if you could do that.

Like I said last week, Metro isn't trunked. I don't scan fire so I can't comment. You are more likely to need a trunked scanner for your hotel than the cops.

There was an episode of CSI that involved air range, and the investigation was run by the sheriff, not metro. I thought this was interesting, so I checked out the metro website and found that even though the organizations have been merged, metro reports to the sheriffs department, and the airport is not in the incorporated part of the city. To make things more confusing, Metro has a substation at the airport.

For another Vegas tidbit, the city was going to change the artwork on its letter head. Some committee came up with artwork that incorporated Boulder Dam and McCarran airport, to which the mayor inquired what fool approved this artwork since neither the airport nor the dam is under control of the city.

While at the airport, be sure to enjoy the view of the "janet" aircraft from the parking garage:

Hello Ed,

There are a few utilities out there that work towards that. Scanning a system that's Type-1 when your scanner is in Mode E2, you will notice that the IDs differ. Plugging these different Ids into the cells of the Excel spreadsheet that I use, it pretty much eliminates several code sizes. But thus far it hasn't proven to be totally successful. Though it is of great help.

Here is where you can get the Excel spreadsheet: http://www.execpc.com/~ghahn

Those are the planes that don't ferry employees to area 51 since it isn't there, arent' they? Whose security-contractor employees recently picketed against unfair conditions "at nowhere".

Yes but shhhhhh......

What is really cool is to watch them land at the Groom Lake base. They fly very low over the mountains. When they are flying around route 95, the planes are quite high because they are pretending to be a civilian flight. I've spotted them while hiking Mt. Charleston and Mt. Sterling.

You can scan the McCarrin airport freqs and you will hear the planes use a Janet callsign. They use this callsign along most of their trip, but change callsigns when they talk to the Groom tower over 1xx.xMHz AM.

Now that I think about it, you can also hear these planes of the clearance freqs. They will give a destination of Mercury or the TTR. I don't recall if they ever say they are going to Groom Lake.

I guess I don't understand what you are saying here, Ben.

You initially asked what CDF used it for; we answered it's not a CDF channel. You replied with the list of numerous local government users and 1 State license.

Am I missing something?

Hey Ben, why not just give us the URL. We all use different email programs and that formatting shows up differently (In my case it was a mess).

I don't know what he was using, but here is the FCC's data base
result (mind the line wrap):
<http://svartifoss2.fcc.gov/cgi-bin/ws.exe/genmen/uls/freq_st_res.hts?db_id=19&rows=0&state=CA&freq=00000151.02500000>

If you have problems sending long URLs, like the FCC search results addresses, you might want to use this little "email this" app

I dragged the logo thing onto my favorites bar, and it really helps... it's free and works with IE and Netscape.. don't know about AOL browsers.

Harry

From: gary
Topic: 9621 Message: 9632

One is in Livermore, and the other is in Los Altos Hills. The difference is about 37 miles.

Sorry, I couldn't resist the lame jokes. As the post explained, Foothill is March through October on the 2nd Saturday. Livermore is the first Sunday of the month, rain or shine. Livermore follows the rules set by the community college system and does not start until 7AM. Foothill starts at oh-dark-thirty. Personally I can't get motivated to look at junk with a flashlight, so I don't get to Foothill till about 7Am to 7:30, if I bother going at all. The proceeds from Foothill benefit a different group each month. The proceeds from Livermore go to the Livermore Amateur Radio Club. [LARC].

If you want my opinion, go to Livermore. The deals are better and the starting time isn't crazy. There are too many professional vendors at Foothill who don't mind taking the same crap there all year long until they get the price they want. At Livermore, most people just want to sell what they brought.

At Foothill, it's history by 8:30AM, i.e. the vendors are packing. At Livermore, I've seen vendors unloading at 8:30AM and generally selling until 10AM.

Note that Foothill College requires $2.00 to park your vehicle, so you better have one ones that will work in a bill reader, or enough change. Parking at Livermore is free.

Ebay is ruining both fleamarkets, because the items fetch much more money on ebay than they do at the fleamarket. Foothill is well known for vendors who have ebay price lists handy and don't mind showing them.

Benicia Fire on 155.94 has just completed their first citizen's emergency response training class. Called BERT,
(Benicia Emergency Response Training) there is a report about it at the link below.

The department also plans to publish a newsletter and is looking for title suggestions. No contest, No prizes,
just some input on what to call their BERT newsletter.

Any suggestions?

I'll be up that way on Sunday (tomorrow) and give it a try.
Pretty wierd. I assume it's so security can monitor the electric fence
and know if there is a break attempt. If I lived close enough
I'd be tempted to dedicate a scanner to that freq as a breakout
alert. Then again, it probably would drive me crazy.

What happens when the power to the fence goes down?

Hello Kevin,

From what I gather, the freq is used to inform the guards if the fence is active or not. There are times when the fence isn't active at all. You can hear the watch commander on the prisons trunk call for fence activation or deactivation. I'm sure at night the fence is active. I'll do what you suggested. I live far enough away to not worry about a prison break, but close enough to just receive the fence.

Backup batteries. It wouldn't take much really. Think about those stun
guns that take a simple 9 volt battery and give out 110,000 volts.

Topic: 9642 Message: 9642

Hello to the list.

I've played around all day, listening to the Vacaville CMF Prison system, which is a type 1 Trunk. This evening I had some luck. I received comms as follows:

Unit calling Desk Sgt. with ID 2125
Desk Sgt replied on 1088
Unit replied back on 2112
Desk Sgt back on 1118

The excel sheet that does the math eliminated every code size except S-14. Since that code size can only be placed into Block 0 and uses 8 Blocks, it's the only code size usable.

So now I have one scanner set to E1 User Map S-14. We'll see if that works. I know that sometimes the scanner will pick up errors in the IDs, so time will tell.

For those who are close enough to pick them up:

857-860.2625 Mhz

No, I meant does the radio message change if the power to the fence goes down.

One note, the radio will always send out the same id in a Type I
system. Unless 2112 came from a different radio, it's wrong.

Regarding the spreadsheet, S-14 is definitely not the right sizecode.
With any of these ids, they're so low in value they fall within the
bits reserved for radio id making the fleet and subfleet all zeros
which I know is wrong.

Here's what I have:

>Enter value (If hex preface with 0x): 2125
>
>A(1) 0033-0 RID: 13 [D] Max: 7126-3 RID 15
>B(2) 004-1 RID: 13 [0D] Max: 715-7 RID 63
>C(3) 002-0 RID: 077 [4D] Max: 707-7 RID 127
>D(4) 000-04 RID: 077 [04D] Max: 700-15 RID 511
>E(5) 016-2 RID: 13 [0D] Max: 763-3 RID 31
>F(6) 008-2 RID: 77 [4D] Max: 731-7 RID 31
>G(7) 008-1 RID: 77 [4D] Max: 731-3 RID 63
>H(8) 004-0 RID: 077 [4D] Max: 715-3 RID 127
>I(9) 002-0 RID: 077 [4D] Max: 707-3 RID 255
>J(10) 001-0 RID: 077 [4D] Max: 703-7 RID 255
>K(11) 000-08 RID: 077 [4D] Max: 701-15 RID 255
>M(12) 000-02 RID: 0077 [04D] Max: 300-15 RID 1023
>O(13) 000-01 RID: 0077 [04D] Max: 100-15 RID 2047
>Q(14) 000-00 RID: 2125 [84D] Max: 000-15 RID 4095

We know it isn't a fleetwide call so we can eliminate S-1, S-3, S-8 to
S-10, and S-14.

>Enter value (If hex preface with 0x): 1088
>
>B(2) 002-1 RID: 00 [00] Max: 715-7 RID 63

>D(4) 000-02 RID: 064 [040] Max: 700-15 RID 511
>E(5) 008-2 RID: 00 [00] Max: 763-3 RID 31
>F(6) 004-2 RID: 64 [40] Max: 731-7 RID 31
>G(7) 004-1 RID: 64 [40] Max: 731-3 RID 63
>K(11) 000-04 RID: 064 [40] Max: 701-15 RID 255
>M(12) 000-01 RID: 0064 [040] Max: 300-15 RID 1023
>O(13) 000-00 RID: 1088 [440] Max: 100-15 RID 2047

Now we have a radio id which is zero. Not something we want so eliminate S-2, S-5, and S-13 because of a fleetwide call. We then have S-6 with too high of a radio id so we eliminate it, same for S-7.

>D(4) 000-04 RID: 064 [040] Max: 700-15 RID 511
>K(11) 000-08 RID: 064 [40] Max: 701-15 RID 255
>M(12) 000-02 RID: 0064 [040] Max: 300-15 RID 1023

>Enter value (If hex preface with 0x): 1118
>
>D(4) 000-02 RID: 094 [05E] Max: 700-15 RID 511
>K(11) 000-04 RID: 094 [5E] Max: 701-15 RID 255
>M(12) 000-01 RID: 0094 [05E] Max: 300-15 RID 1023

This leaves us with three possibilities, S-4, S-11, and S-12.

I'm not sure how the spreadsheet eliminates sizecodes but it does it by bad logic.

I'll have to recheck on a radio id of 0 (zero) being okay.

Wayne

Hello again Wayne,

Perhaps a few pointers, because this system is really driving me nuts. I had both trunk trackers set for Type-2. The IDs below which I mentioned were all part of the conversation. Since the IDs changed throughout the conversation, I would assume it's a Type-1. So how does one crack the code size and get a proper map? Also, with regards to Fleet and Subfleet being all 0's, it's impossible to design a radio system to do that?

Like I said, this is the only Type-1 system I can receive, and figuring it out has been a pain for me. So any help would be appreciated.

Thanks
Scott

I know H2F mentioned 000 isn't possible but I haven't updated it (Just
did though) to reflect that it is possible.

Fleetwide (Where the subfleet is 0) won't be used for a normal
conversation. It's too impractical.

Here are the ranges for Type I. This is per Motorola.

>A(1) Block: 0-7 Fleet: 000-127 Sub: 0-3 RID 1-16
>B(2) Block: 0-7 Fleet: 00-15 Sub: 0-7 RID 1-64
>C(3) Block: 0-7 Fleet: 00-07 Sub: 0-7 RID 1-128
>D(4) Block: 0-7 Fleet: 00-00 Sub: 0-15 RID 1-512
>E(5) Block: 0-7 Fleet: 00-63 Sub: 0-3 RID 1-32
>F(6) Block: 0-7 Fleet: 00-31 Sub: 0-7 RID 1-32
>G(7) Block: 0-7 Fleet: 00-31 Sub: 0-3 RID 1-64
>H(8) Block: 0-7 Fleet: 00-15 Sub: 0-3 RID 1-128
>I(9) Block: 0-7 Fleet: 00-07 Sub: 0-3 RID 1-256
>J(10) Block: 0-7 Fleet: 00-03 Sub: 0-7 RID 1-256
>K(11) Block: 0-7 Fleet: 00-01 Sub: 0-15 RID 1-256
>M(12) Block: 0-3 Fleet: 00 Sub: 0-15 RID 1-1024
>O(13) Block: 0-1 Fleet: 00 Sub: 0-15 RID 1-2048
>Q(14) Block: 0 Fleet: 000 Sub: 0-15 RID 1-4096

Note: When you see a Type I ID along the lines of 2012, 701, or 611,
that first digit (Left-most) is the partition or block. The fleet is
then appended to it. 611 is not actually six hundred eleven, it's
six-eleven. For example, block 6, fleet 11.

After reworking things I'm going to have to go back to H2F and change
a few things (Version 0.6 will be the correct one). Working with hex
and decimal at the same time has a tendency to get things mixed up
considering hex 0 can be considered as 1 with certain decimal

conversions. All values above are in decimal though. And I've realized a few other sizecodes could be valid. I'll post a follow-up email.

Maybe we all can see how complicated Type I can get.

Wayne

wrote:

>> >Unit calling Desk Sgt. with ID 2125
>> >Desk Sgt replied on 1088
>> >Unit replied back on 2112
>> >Desk Sgt back on 1118

First, there is no possible way that a radio on one channel can have its raw value (Seen in E2 mode) change because of how Type I assembles information. The reason Type I IDs, when in E2 mode, change is because the whole raw id contains a radio id. So when different people talk the id will change up or down in small amounts, with respect to sizecodes. The reason multiple conversations on one frequency stay the same is another story (It's called 'message' trunking where the replying radio doesn't have to reauthenticate with the control channel).

I checked my code for H2F and found a few problems, mostly related to radio ids. So the previous email, which used the radio id to rule out the sizecode, was wrong. The radio ids were valid. Woops!

And now after reviewing the printouts for each of the four ids above I can't possibly come to a conclusion as to what sizecodes are valid.

[Now for a long explanation of Type I and IIi operation, because it needs to be long to make sense]

Also, and this goes with many Type I systems these days (With the exception of most commercial/private systems) is that a protocol called IIi may be used. This is where the radio id is sent separately. In that case you would end up with numbers that are less unique. All transmissions on one channel will keep the same E2 ID as the radio id is not included giving the value no reason to change. San Francisco used it before they went to their new system.

For the information given by Scott above we can't be sure if it is used because with IIi operation regular Type I radios can be used. You have to look at the raw data (With Treport) to verify.

For our example we'll use a sizecode of C. 'C' and 'D' are often the most common. I believe the default fleetmap for Type I systems (When they have not been reconfigured) is S-3, S-3, S-3, S-3, S-4, S-4, S-4, S-4.

So using a sizecode of 'C,' or S-3 in Uniden terms, we get a Type I id of 305-6. We'll give this subscriber making this transmission a radio

id of 99.

Block: 3
Fleet: 5
Sub-fleet: 6
Radio ID: 99

If we're to have our Trunktracker in E2 mode when the above transmission was made we would see 30563.

When you apply Type I formatting to that id with sizecode 'C' it gets divided up accordingly. Everything is done binary so I'll show you below.

The address portion of an OSW (This is the name of the data information sent out over the control channel) is sixteen bits wide, or $FFFF, allowing for a highest value of 65535.

Decimal: 30563
Binary: 0111011101100011

Sizecode 'C' divides the above up as...
011-101-110-1100011

011 is the Block
101 is the Fleet
110 is the Sub-fleet
1100011 is the Radio ID

If you convert those to decimal (Done with the Windows Calculator in Scientific mode [Under Options]) you will get the same thing as typed several paragraphs up.

With each sizecode that raw address is divided up differently based on the needs for Fleets, Sub-fleets, and Radio IDs by the customer.

When an announcement of a conversation takes place over the control channel (Directing radios to a voice channel) it only contains the hex channel assignment, whether it is meant for a group or individual radio, and the block/fleet/sub/radio combination. This is sent as a single word, or one OSW.

With Type IIi signaling, as I mentioned earlier, the radio id is sent separately. Two OSWs are sent this time. The first OSW contains the Type II radio id. Being Type II radio ids have a maximum of 65534 it takes up the whole address portion of the OSW. The second OSW contains much of the original OSW from the previous paragraph but lacks the radio id.

If a radio operating in IIi mode sent out a call (And using the same block, fleet, sub as I used earlier) we would see 30464 every single time a IIi call is made because the radio id is no longer included. It is basically nulled out (Zeros used). When a majority of traffic IIi

it makes it very easy to pick out the sizecode based on the number of zeros.

Here's another example with Sizecode H (S-8).

E1: 711-2 (Radio ID 113)

Block: 7
Fleet: 11
Sub-fleet: 2
Radio ID: 113

In binary:
7=111
11=1011
2=10
113=1110001

Put those bits together and you will see 63345 in E2 mode.

Hopefully, this explains it all. Feel free to ask questions.

CALSTAR 2 appears to have been replaced by a new and bigger craft ,been seeing it at Gilroy off and on for a week or two and now just heard Calstar 2 warn Valley Med that they were in the new bird and to let security know. Ill try to get a pic of it this week and post I know the paint job is different and as I said it is bigger,no word yet on when they are moving bird to Hollister

Im sure that most of you are aware of this show tonight on CBS but in case you didnt:

9/11
CBS 5 Mar 10 09:00pm
Special/Other, 120 Mins.

Filmmakers Gedeon and Jules Naudet document emergency personnel's response to the Sept. 11 attacks on the World Trade Center; host Robert De Niro.

Original Airdate: March 10, 2002.

Kind of an interesting situation. This guy has exercised his 2nd amendment rights at the swat team, and they returned fire. The swat team shot out his porch light with a .223. The suspect has a surveillance camera, which the swat team is trying to avoid. The swat team got out the M4 with 3 30 round clips.

PG&E called to kill power to a certain building, which should happen in 10 minutes.

I just put the scanner recorder on it.

Here's a bit more on what you'll see...
(9 pm tonight, CBS)

----- Original Message -----
From: <stevewfd@...>
To: <undisclosed-recipients:>
Sent: Wednesday, March 06, 2002 10:50 PM
Subject: [firealarm] More info on CBS 9/11 Sunday from 9 p.m. to 11 p.m

CBS screened its powerful yet surprisingly nongraphic (in terms of visual
mayhem) documentary, 9/11, for reporters Monday night.

The special is set to air Sunday from 9 p.m. to 11 p.m.

It will air no traditional commercials, but it will have three breaks,
underwritten by Nextel Communications Inc., that will contain public-service
announcements relating to the Sept. 11 tragedy, including fund-raising
pitches.

The two-hour film will contain seven minutes and 30 seconds of PSA time,
although specifics are still being worked out, network officials said.
The film, by French brothers Jules and Gedeon Naudet, started out as a
documentary about the rite of passage of one rookie New York firefighter
stationed just blocks away from the World Trade Center.

By chance, Jules Naudet happened to be on the street on a routine
gas-leak-inspection filming when the first plane hit the North Tower. Naudet
is believed to have captured the only known footage of that first plane's
impact.

Jules Naudet then spent the next hour inside the lobby of the North Tower
filming events as they unfolded.

In a question-and-answer session after the screening, Naudet said he saw
bodies in flames on the ground as he entered the Tower, but he made a
decision not to film them, nor any of the other graphic scenes of horror he
saw that day.

'It was a decision I made on the spot that these were images that people
would not want to see,' he said.

What can be heard clearly in the film are the bodies of victims crashing to
the ground after leaping from the Tower.

Firefighters also discuss the horrific scenes they witnessed. The language
in
the film is raw -- lots of firefighters using the F-word and variations
thereof (motherf----- being one example).

'The language is rough, but so were the circumstances,' said Susan
Zirinsky,
the 48 Hours executive producer who oversaw production of the special.
The
film she said is a 'living historical document.'

Robert De Niro, who serves as the film's host, warns viewers about the
language.

After the South Tower collapsed, Naudet and all of the firefighters in
the
North Tower were ordered to evacuate. He believes he got out with six to
eight minutes to spare.

Stephen A. Wolf Ex-Commissioner
Woodmere Fire District
Woodmere, NY

That's correct about Calstar 2, Gilroy. They just recently got a Bell 222 that will be their permanent helicopter.

As for the new base, we just opened a new one in Salinas, Calstar 5, that is part-time (fri-sun only). They got the BO-105 that was in Gilroy. There are no plans to open a base in Hollister.

One thing not mentioned in the show is that much of the building collapse can be blamed on the jet fuel setting off the diesel fuel stored in the building to run back up generators used for NYC's emergency services, the USSS, etc. Same thing happened in the Murrah Federal building.

It is really important not to sweep these events under the rug but have thorough investigations and then follow through with new laws, building codes, policies, whatever. At the moment, the Bush administration is fighting the notion of a Warren Commission style investigation of 9/11.

Another interesting side note is that there was going to be a rather large scale project to investigate jet fuel fires at the Nevada Test Site. They were going to burn various objects and structures including steel frame buildings with jet fuel. The project got canned due to environmental concerns. Had the study been done, more attention would have been paid to the destructive nature of airplanes. The claim is the impact of the planes would not have made the WTC towers collapse.

That theory is being used to explain the long fire and collapse of
WTC/7, not 1 & 2.

There has been a program on the History Channel that explained why the Trade Centers collapsed. The outer walls supported the structure. And the "I" beams connected the walls. As in other designs, the support came from within. And the walls were nonsupportive.

Basically what happened was the steel "I" beams became so hot they slumped and the buildings collapsed. Something to that effect. You can tell I'm no engineer.

There was a program (I believe on the Discovery channel) about the collapse. It showed building construction of the towers and how Truss construction of the floors. While it made it a quicker way to construct a building so large, it certainly is not the way any firefighter who have voted for (if they could). Truss construction, especially truss roofs have caused lots of FF. deaths in this country. In addition, not nearly enough protective fire retardant was used on the beams etc. Had plenty to do with the failure of the building to withstand the fire.

Richard is correct, in my first post I mentioned the discovery channel, but Richard has it correct. If they show that again, watch it. Being on the West coastI had no idea how they built those buildings, now I know how and what they did wrong. Again, any firefighter who knew that in advanced must have known the danger, still the brave brothers of the FDNY rushed in.

From: b52hbuff@att.net
Topic: 9666 Message: 9677

I read it. Below is the only passage that remotely
addresses an issue of Federal involvement.

"Federal guidelines for public buildings created after
the Oklahoma City bombing warned of the dangers of
similar trusses in terrorist attacks, the newspaper said"

As I was saying, please provide a reference that the
Bush administration is attempting a coverup...

A couple years ago 33.96 was listed by Kelty as "Santa Clara County Fire Dispatchers' Red Net" with input of 33.10 and PL 156.7, with NASA-Ames also having it on-board; it's still an "Active" license with WMZF381; nobody else in Calif licensed on it, though it is popular in the northeast part of the country.

9684. 802.11b wireless directional antenna

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-03-12 00:27:09 UTC
From: Jake Hickok
Topic: 9684 Message: 9684

If the subject doesn't make sense to you, the delete key is in the upper right hand corner.

Now that I got the interested's interest, I found a couple ideas and theories on Pringles cans and directional antennas for your wireless LAN needs. This may work for other radio receptions as well such as trunked systems and whatnot (up there in the 800Mhz range, wireless LAN's are on 2.4Ghz for the most part). What started me on these ideas and theories was an article in BBC on hackers who are using this design to listen on corporate network's wireless LAN's. As scannists, we can work on design and make an antenna that relates to our bands and needs.

BBC Article
http://news.bbc.co.uk/hi/english/sci/tech/newsid_1860000/1860241.stm

Yes, you use some cheap (or chip) parts to make an affective 12db gain direction antenna.

The highly acclaimed O'Reilly Company who produces excellent programming books (their CSS book basically made the new NorCalScan.org)
http://www.oreillynet.com/cs/weblog/view/wlg/448

The original design I think...

Different. Al Tong captured the 211 guy, 'cause I just talked to him about an hour subsequent on another matter. Oh wait. You said 211 in SSF. Don't know about that one. There was a 211 at the BofA in SF that got captured by the 4Xray3 (RAT). I just initially heard Pacifica going to the "green" and then hearing speeds of 110 mph. going up 19th Ave. past Stonestown. Heard the units from my window. Took a little while for SF to join in.

Bundy

110 MPH for only a 245 with no death thats to
Dangerious most other agencies would have called off
the pursuit with the time of day and everything. Good
that they caught the suspects but they woulda paid a
lot if they or the suspects wrecked and killed someone.

9696. NYFD Radio Problem

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-03-12 02:57:47 UTC
From: haywardmike
Topic: 9696 Message: 9696

Early this A.M. the former Fire Commissioner was interviewed on account of the anniversary hoopla. The news person asked about radio problems during the 9/11 response. He indicated that the repeater failed as a result of the building collapse and further stated that the department was getting digital radios so that wouldn't be a problem in the future.

Maybe he knows something about the properties of digital radios and repeaters which ensures their ability to withstand another 9/11 event???

>
> Brian

I got the impression that what happens at "normal" incidents was multiplied many times because of the sheer number of personnel at and responding to the incident: too many people have too many urgent things to say on the radio at once. It seemed likely that many missed calls were simply stepped-on by other transmissions, making it appear to be a RADIO problem when it may have been more of a CONGESTION problem.

More frequencies or talkgroups would then have been of very limited value. If you have, for instance, half a dozen control points... IC, logistics, safety, and a couple divisions... a system can only handle six transmissions at once, maximum. If 10 or 15 or 30 or a hundred firefighters are all calling at once, only six - at most -are going to get through; it's entirely possible that NONE would get through due to all the interference.

Some occurrences are simply going to overwhelm even the best radio system.

IMHO

It could be a form of officer saftey.. Suspects
friend reads this goes out a start shooting at the
cops.. it could happen..

Excellent info on 802.11 at the Bay Area Wireless Users Group site:
http://lists.bawug.org/pipermail/wireless/

Subscribe at: http://lists.bawug.org/mailman/listinfo/wireless

And fascinating "network analysis" software, NetStumbler, at
http://www.netstumbler.com (there is a BBS on the website well worth
checking out for those interested in the technology)

Brian: I appreciate your input. At the time of the post, they had not made themselves known at the location of the suspect, nor had he started shooting at police. Even in an currently working situation, I wouldn't release an address for a number of reasons, officer safety being the primary.

It's one of the many things I've learned from my experience with both fire and medical - ride alongs with local fire and police department, and more than 2 years with CALSTAR.

From: gary
Topic: 9658 Message: 9704

Ah, don't dis' Evan. It was a pretty interesting event and I want to encourage him to give us a heads up again should the opportunity arise.

This guy had all sorts of surveillances cameras at his apartment and plenty of ammo in case the evil-doers came after him. I heard on the scanner that he had a TV monitor system that would rotate through his cameras, which did not make the swat team happy as they tried to get into position. I still have to review the audio to see how the 2nd amendment exerciser got ventilated.

==========
http://www.bayarea.com/mld/mercurynews/2839495.htm
A man suspected of shooting a neighbor and a Sunnyvale officer was killed by a police sniper's bullet, dying in a fortress-like apartment that contained more than 1,000 rounds of ammunition, several assault rifles, and a video surveillance camera system, police said Monday.

When I first saw the post last night I thought it was probably a "good call" of you to do it as you did... I figured you must've had good reason to not publicise the location. Some things can just wait... and unless it's in the reader's neighborhood what difference if you have to wait a while for the address....

Harry

Guess he doesn't know he'll be getting a more complicated to use radio
either. I've worked with both FD and PD and all they care is the radio
works. They don't care about scan lists, or navigating menus, or cool
displays. When I was involved with a system transition from a
conventional system to a new county-wide trunked system many of the
officers were frustrated with the radios based on lack of ease of use.
Twisting knobs is one thing but having to navigate zones is another.
That's why it's best to stick the troops with as basic as possible a
radio.

Wayne

Radio tech for several years dealing mostly with public safety but I never said I had extensive experience. And you yourself vouch for not having extensive experience so you are in no position to whine about what's right or wrong. Considering everyone dispatches differently there is definitely no authority.

For one thing, it was his choice to post the info he wanted. If you don't like it, tough. You don't need to be cranky about it, go vent privately as most of us don't want to hear your crap.

If you want to argue, do it privately as this isn't the place and I'll no longer reply here.

9720. Re: [bayscan] FINALLY SOME SANITY

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-03-12 15:57:03 UTC
From: Evan Platt
Topic: 9711 Message: 9720

This will be the last message I post regarding this - and Bryan, PLEASE, unless you have something ONTOPIC and WORTHWILE to contribute, go back into lurking mode - as far as I can see, you haven't posted anything to bayscan since 8/12 (as far back as I have records). And someone once told me if you don't have anything nice to say don't say it.

As far as officer's safety is involved, that's my primary concern. And if you don't want to read my post because it doesn't have the address, then don't. I think most of us here are mature enough to understand that if a post goes out regarding an active incident, that it may lack some specifics.

I'll tell you what, I know on one of my recordings here, I have the phone number for both the BC van and the PIO. I'll add those to my posts, that way if you need anything else, you can call the BC or the PIO on their private phone and ask them.

However I'd always rather err on the side of being too caucious and NOT give out an address then accidentally give out an addres, however that's just me and I think most of us here can agree with that.

So if you don't like someone's posts, you have the delete key, and you have a filter. I'm close to that point.

Let's get back on topic now.

Evan

What do you mean by pls- gone, do you mean there is lots of radio traffic where you can't transmit? How do I hook up to GMRS repeaters? Or can I use the GMRS without repeater?

Milt

9722. Re: (FINALLY SOME SANITY) - MODERATE

Yahoo group: bayscan (2002-01 — 2002-06)

From: jake@norcalscan.org
Topic: 9722 Message: 9722

Lets stop now. It's amazing how the maturity level in this group can drop to nothing in a matter of seconds (or a few posts). Get back on to scanning and bay area radio.

As for somebody not posting some address, or frequency, or whatnot, WHO CARES??!! It doesn't matter. That person thought in his mind it isn't good to post certain info at a certain time. Don't nail him or anybody else for making a smart, personal decision. It's all in the eye of the beholder. Take this from someone who bumps into the local PD consistently concerning my website and officer safety. Officer safety? It's in the eye of the beholder. If there is ANY doubt somebody's life could remotely be in danger for something I post - I'm not going to post. Plain and simple. If you got a problem with that, ignore it or go elsewhere. Get off the power wagon and step back in the mud where the rest of us are.

Jake - CoModerator for Bayscan

Yes you can use GMRS without a repeater on simplex Freq. but you need a
license from the FCC to use GMRS
and you still can only go a few miles at best...
I still think that if you are going to spend the money for radios and FCC it
would be cheaper to do Ham stuff and more flexible
H/T's up to 5 watts output
Mobiles up to 50 watts output (VHF) 35-40 watts (UHF) and there are about
10-30(or more) Ham repeaters in the Bay Area
with repeater books and web sites like www.qrz.com will help with test and
radio reviews or www.arrl.org and repeaters out of your local area or your
local radio club like the San Francisco Amateur Radio Club www.sfarc.org
Just my .02 cents worth

Hi George,

I'm looking for something that the kids can use and I can keep track of them while we're out. Something that an eight year old and my wife can handle. I see that there are FRS & GMRS radios out there now. Or should I just stick to FRS?

What is the cost of GMRS licence?

Thanks,

Milt

9725. Re: FINALLY SOME SANITY

Yahoo group: bayscan (2002-01 — 2002-06)

From: ofc53
Topic: 9711 Message: 9725

As a police officer, Regional SWAT team member, and long time scanner listener, I appreciate Evan's concern for exercising discretion when posting information regarding "in progress" tactical operations. While law enforcement would prefer having no one listen in on our transmissions during operations, we realize the airwaves are free and it is your right to listen in. By far, the large majority of scanner operators are responsible about the information they hear and what they do with it. However, there will always be that small percentage of criminals, drug dealers, and psychos who use a scanner for illegal purposes.

Please realize that any information gathered on the scanner can be used or passed on to the bad guys. Whether it is an address, writing about "snipers being deployed", or number/types of units responding...information is information. I know the chance of bayscan posts being passed on to a suspect during an "in progress" incident is MINISCULE but in the tactical world, we prefer to take every little advantage we can get. The last thing we need is a bad guy's buddy to call him up and pass on info he got from posts on the internet. Murphy's Law applies to these operations a lot and if it means the chance of a hostage, innocent bystander, or officer getting hurt as a result, I would rather err on the side of caution.

Many have mocked Evan's involvement or experience with public safety. Although I don't know Evan and have never met him, his perspective is right on target as far as public safety and officer safety is involved.

To the bayscan moderator and members, I know this thread has been going on and on so I apologize ahead of time for adding to it but I just felt it was important to get my perspective in. Having been involved in tactical operations and then coming home to read about it on bayscan, I'm confident the large majority of members are exercising discretion and acting responsibly with the information they hear. Thanks.

Problem is Officer Hsiung, that while he says he is concerned for Officer safety, he 1) post the Sunnyvale Police Frequency and 2) points out that the AR15 is being deployed. If you ask me , that is hypocritical

1. If I didn't know the frequency for Sunnyvale DPS, it would take me all of 3 minutes to find it. (search the archived posts here would come up with about 10+ results).
2. The deployment of the AR - You're right, I could have probably omitted that. However someone who doesn't know what "Deploying the AR" means (I didn't up until recently!) then it doesn't matter. Anyone on this group most likely has a scanner, and if they're in hearing range of Sunnyvale, most likely have their frequency.

But I guess #1 is a valid point open for debate (unless the moderator disagrees?) - For an active incident, should we omit the frequency? If I simply put "SWAT Activity, Sunnyvale - Suspect barracaded in house with shotgun.", I KNOW I'd get 20 replies asking for the frequency.

It would simply take a few minutes of handwork to find the frequency.

However for the mentioned Incident on San Juan drive, after the initial dispatch, "San Juan" was mentioned just a handful (less than 10) times, however the exact address was only mentioned a few times. On a large street, such as El Camino Real, I'm sure "El Camino IC" or "ECR IC" would be an appropriate IC name, but on a smaller street, the name is omitted for these reasons.

Evan

Hey guys and girls,
Im about to head to work and don't want to come home to see this debate continuing on here.

Personally I love a little hot debate on here and hate to moderate a list but I think we are beating "dead horse" here at this point.

You can e-mail each other if you want to continue the discussion off list but lets keep this to the subject matter.
Some people get pissed off when these things continue too long and then drop off the list.

Thanks for every ones cooperation.

Robert

From: caladded@aol.com
Topic: 9730 Message: 9731

Your right Bob, but I would like to add just one thing, Evans most recent post is a good one. If we are truly interested in Officer Safety. We maybe should only post the type of incident and city. Lets me honest (Evan) 99% of those on this list have the Primary FREQ (such as the one Sunnyvale used) readily available, if not already in the scanner. The chance of anyone blowing a fuse and waiving around a shotgun etc AND reading bayscan are very slim, about as slim as me winning the lottery LOL. Thats my final post, I promise.

9732. Newcomer & Bay Area Live Audio PC Feeds

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-03-12 21:46:59 UTC
From: kg6irh@ftnetwork.com
Topic: 9732 Message: 9732

I recently joined this group. Mt QTH/10-20 is a mile north Lake Merrit in Oakland.
I have a few queries I hope someone in the group can help me with:

1.--Does anyone know of any live audio PC feeds for Bay Area PD
frequencies, particularly Oakland PD and SFPD.

2.--Does anyone know the Emeryville PD and BART PD frequencies?

3.--Does anyone know of any urls to find mods for a Realistic PRO-
2009 scanner? I recently found one which I managed to get to
operate. It doesnt get anything above 512 mHz. I might just
end up using it as a Home QTH scanner for Ham repeaters, GMRS
repeaters and FRS frequencies. Id like to see if I could get
more than 8 memory scan channels.

Personally, I am a Person With Disabilities whose impairments keep him home most of the time. I was a paralegal for many years but never managed to finish law school.
Last year, close to four decades after my uncle got me first interested in Ham Radio, I got my Technician ticket. I am now studying the code for a 21 April 2002
VE exam session. Since I have already passed the General written element I will be automoatically upgraded to General if I get the code by 26 October 2002. I hope to get an Extra ticket before the summer is out and, for some, reason a General Radio Telephone License within the next year. I am, in closing, a third generation scanner buff and, yes, my 12 y/o son is getting into scanning carrying the scanning
hobby into a fourth generation. (I am trying to get him to get a Ham ticket.)

Well Tim,
I can probably help with 2 out of 3 questions you posted.
1. I've seen links for Oakland and SF live internet scanner feeds, but as of yet i've not ben able to get thiem to work, I asume that they are dead links.
2. Emeryville PD is on: 453.450, the fire department is dispatched by Oakland and uses oaklandd's trunk system. BART is now trunked (EDACS) system:
866.075
866.725 (control channel)
866.8875
867.375
867.600
867.800
867.850
867.9625
868.150
868.6875
enter them from lowest to highest, good scanning, God Bless.

>>>I think about $ 70.00-80.00 per term ???I would stick with either FRS or maybe an >>>11 meters (C.B.) rig and H/T

George-W0WEB is right. I think the term is 5 years. $50 additional will get one GMRS operating privileges until one's GMRS callsign appears in the FCC data base since that, not receipt by the licensee of paper license, confers operating privileges in GMRS as it does in Ham.

Another option is the two meter license-free Multiple Use Radio Service (MURS) where the maximum power is 2 W and which operates somewhere around 151 mHz. MURS was carved out of the Private Land Mobile Service, eg, businesses.

There are several Yahooo Groups on FRS, GMRS and MURS one can join to learn more.

Of course, another option is to pay $10 and take the 35 question test for a Technician Ham ticket. The test is not that difficult. It is multiple choice and 70% (28 or 27) correct passes. Aside from repeaters one has, inter alia, much more power available and one can experiment with, and work, one's own equipment which is not permissible on CB, GMRS, FRS or MURS. And one also has a much greater spectrum of frequencies such as, for a Technician, all Amateur Radio frequencies above 6 meters/50 mHz.

A good practice test, one which I used to prepare for the Technician exam on which i scored 35/35 is found at http://www.qrz.com/

One can check the ARRL site at http://www.arrl.org/ for upcoming exam sites. As I said the test fee is $10. The license is free and has a decade term and can, at this point, be renewed free without further testing, for ten year intervals for life.

From: caladded@aol.com
Topic: 9732 Message: 9739

Ben, actually, they are new to me. I haven't heard them use them, but I don't live in San Jose. SJFD uses Command 4 for all high-rise fires and I would guess they are TAC channels. Although come to think of it, there was a 3 alarm fire in a high rise fire on New Years 'eve and they used either TAC 5 or 6. If I have to opportunity to monitor any high rise fires, I sure as heck will give them a shot. You have a 780 right? gives you plenty of channels to play with, I have two of them, so I have plenty of channels programmed I am not sure about, but since I have the "space" for them, I program them in.

nope dead as a doornail up here... it's weird how far away of stuff i am
getting with my setup but when it comes to some close up stuff i can't ear..
for instance i can pick up stuff up in santa rosa but i can't get berkeley.
i can get nevada county fd (go figure) and felton cdf but i can't get san
jose fd.. strange......

Oh, I get them fine, on their Primary and Command 3 and 4 . But I would be I need to be closer for those High Rise TAC channels. I can't get TAC 5 or 6 from here and only hear the mobile on Primary and Command 3 if I am near S.J. OR if they are up on Mt. Hamilton. Command 4 is repeated, That why if they have a greater alarm fire, I hope they use it and they do, if Command 3 was busy when the 2nd fire is dispatched. Command 4 is standard for both High Rise and Airport incidents.

I know what you mean. A lot of the traffic on this list is chatter which would best be directed at the original sender rather than to the list in general. This option exists and is available to the list owners. Simply setting the default reply to "sender" rather than "list" would do wonders for reducing non-announcement traffic. (Respondors would still be able to reply to the general list by hitting the "reply-all" button, it just wouldn't be the default anymore.)

Just my 2 cents but if you could only post "incident announcements" this group would be absolutely DEAD... I agree some of the non topic, political posts on here are unacceptable, long and drawn out and most of all boring as heck and should be outlawed, BUT on the other hand someone's chatter could be someone elses "learning time" That is what makes this group what it is..

Shooting in Salinas
East Bolivar St. @ Van Buren Ave. (Possibly in the park/creek area.)
1 deceased party. Crime scene being set up. Nothing further (that I am aware of) on shooter other than a white unknown type vehicle headed towards Main on East Bolivar.

Being worked on 460.175 PD, fire response on 154.205.

Chris
they seem to be having quite a gang war down there last night they shot an
8 year old who got in the way of two rival gangs.....I work at
several bank branches in Salinas and the tagging is getting worse also its
going to get pretty harry down there.....

9760. Radio oddities

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-03-13 06:23:11 UTC
From: Pam & Jeff Schiller
Topic: 9760 Message: 9760

Here is a strange one for you all.....
I live in Hollister on my 780 on a base antenna 40 ft up I do not hear
Berkley fire at all yet.....
when I am in my truck with a pro 71 and a rubber ducky antenna down in the
Carmel Monterey area I can hear them just fine, dispatch ,engines even
portables??? go figure>>>>>>>>
Jeffrey

9761. Re: [bayscan] Shooting in Salinas (e-mail sent @ 20:44)

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-03-13 06:22:55 UTC
From: Christopher Handisides
Topic: 9755 Message: 9761

A little bit after I sent out that message, someone when in the back of Payless with a knife and got the day's receipts.

A friend of mine runs the security at a hospital in Salinas and offered me a supervisory spot. At the moment, I'm rather glad that I told him that I would get back to him -after- my trip out of town next week. Fun Fun Fun.

Chris
they seem to be having quite a gang war down there last night they shot an
8 year old who got in the way of two rival gangs.....I work at
several bank branches in Salinas and the tagging is getting worse also its
going to get pretty harry down there.....

Hi all,

Is there a way to get the e-mail's from this list in a daily digest form or
can I only recieve it the way I do now, where they come constantly?

Thanks!
Patrick Semansky

Thanks for all the replies to my posting. Lots to think about. My wife just wanted me to get a pair of those FRS from Target or Best Buys. With these radios, we can keep track of everyone at trips and shopping. Then I started looking around for radios. Something simple for kids and wife to use. Something small. There are Cobra FRS, Motorola FRS, etc. Not sure what make is good. Then I see Cobra with the FRS/GMRS on Sale at Best Buy for $90. Then there is this licence thing. The Guy at Best Buys tells me I have sign up for a $25 licence and they will "activate" the GMRS part of the radio???I've learned a lot from you guys. Thanks Again.

Topic: 9660 Message: 9767

Since you are on a scanner list, I'm making a wild guess that you have a scanner. Perhaps you might want to just go to the mall and scan the FRS freqs to judge for yourself the amount of traffic. While someone posted the frequencies are really congested, it's been my experience that you typically only have one other party on the freq.

I'd get the cheap Motos Talkabouts that don't have a LCD display. No LCD means there is nothing to scratch.

Note that GMRS capable radios can be purchased at the flea market. The obsolete Moto GP300 comes to mind:
http://www.motorola.com/cgiss/LA/products/discontinued/eng/portable/gp300/
I get 84 hits on Ebay for Gp300, though some are for accessories. Note that these radios need to be programmed.

From: cortlandka5s@netscape.net
Topic: 9773 Message: 9773

FRS is a perfectly adequate for very many comunications chores, and can be had very cheaply.

I found Fry's selling a pair of Motorola Talkabout FRS handy-talkies for $29, marked down from $79. Radio Shack did a $29 clearance on their mobile FRS (you can still find these in some stores), that is contained in a mag-mount on the roof, with speaker/mike and controls in the car. So I'm set if I have to travel with someone who does not have a ham icense; just hand them a RS mobile rig and a Talkabout.

Some scanners don't receive FRS very well, as deviation on these little radios is lower than most other services and their channel spacing is close enough you hear two (or three!) channels at once. Also, the way they're used, short transmissions, direct, means you may miss some conversations if you are scanning. You really need to stop on a channel to hear what's going on there.

Late Tuesday (maybe early Wednesday) I heard Caltrans advising work crews a high speed pursuit was inprogress on 680 and to stop work, get in their vehicles and wait for it to go by. "Do not retrieve your tools or move your vehicles..."

Nice to have warning, yeah! Don't know who was chasing whom, and for what; I heard nothing about it on the CHP frequencies from up here in Sonoma County. Time for the outdoor antenna, I think.

> I'd get the cheap Motos Talkabouts that don't have a LCD display. No LCD
> means there is nothing to scratch.

Actually, 'cheap Motos' are just that, they are cheap for
Motorola. You can find different deals on different
brands. Note I said different, since some of the cheaper
radios are also not built as well. check out costco
for the lower end radios such as Midland, or Cobra.

Also note that there are 'cheaper' Moto's than the
unit w/o a display, but these don't have PL capability.

One other thing to consider is that the displayless Moto
is a bit harder to change frequency and PL. You have
to execute a 'key sequence' and scroll through a voice
menu to pick an option.

It's not a big deal if you're the least bit comfortable
with radios... But maybe a big deal for a wife and kid
that aren't in the hobby. And even if you're good,
it'll take a while to make a channel/pl change.

Bezerkeley has 154.19 all right, but with 131.8.

Well, Sacto County shows that combo as "Sacto County Fire
& Med Multicast" which I guess means it's a rebroadcast of a trunked
group or two. Yolo County has it in their radios so they can speak to
each other.

Tell you what, Ben. Since the freqs and PLs are of such interest to
you, and I believe you said you're in Livermore, why don't you scoot
over to Ham Radio Outlet in Sunnyvale at 510 Lawrence Expressway #102,
in the back, and just a couple blocks southwest of 101. When I was
there last week they had what appeared to be the entire set of Bob
Kelty's Government Radio Systems for all of California; his books are
full of info that's hard to find elsewhere, including PL & DPL tones.
You may be closer to their Oakland store, at 2210 Livingston, but I'd
call them first to see which volumes they have in stock. There's a list
of HRO's entire GRS stock at
http://www.hamradiostore.com/cgi-bin/uncgi/ase?ITEM=GRS&x=14&y=10

That's what I use.

Sacramento Regional Fire/EMS Communications uses
154.190 to dispatch county fire districts plus the
cities of Folsom and Galt. It is a "simulcast" of
Dispatch A1. It is not monitored for receive purposes
and talking on it will not get you anywhere.

West Sacramento (Yolo County) uses the Sacramento City
Trunk System and has the county talk groups in their
radios. Sacramento City FD has the West Sacramento
talk groups in their radios and run automatic-aid
across the river quite freqently.

San Ramon does use these frequencies. Orange is a fireground channel,
Blue is the engine extenders and Purple is the paramedic extenders.
used the same way as CHP extenders are. PL's are 162.2 for all.

Topic: 9798 Message: 9809

The difference there being 154.445 is also and active
frequency used for the rest of the county FD's in
Yolo. You can talk on 154.445 and get the Comm Center.
As I stated before, 154.190 is a "broadcast" only
frequency.

Topic: 9810 Message: 9810

I'm looking to buy an Optoelectronics Xplorer and was wondering if anyone out there has one. It looks like a neat radio toy to have, but is it really worth it (sensitivity, ease of use, etc?) Also, I've seen a computer modification in Monitoring Times to let it receive cellular (blocked on standard versions). Anyone know if the newer versions of the unit still have this capability?

Wayne,

It was on the trunked system. Sorry, I didn't note the trunk group.

I've been getting them one per paycheck (grin). Already heard some interesting stuff on a CESRS frequency I just programmed.

Oakland did not have the Golden Gate book (green) when I was last there.

(Speaking of paychecks, anyone know someone in need of an EMI engineer?)

I noticed the new green book has the MERGE LTR system listed, but only one freq. This doesn't make sense for a trunked system, right?

Bob will make a special delivery at the Livermore Flea Market if you make arrangements ahead of time.

Well, this is off topic, but man, some people are really stupid, even if they do work for NASA. Check out the email pasted below. It reminds me of some stuff we've seen come across this list Around election times. so keep that in mind next time you may be inclined to reply in anger to or about someone. In the case here, the guy was using his work computer so maybe folks on their home machines are not so vulnerable. Jim

Date: Thu, 7 Mar 2002 17:35:14 -0500 (EST)
From: NASAOIG@...
Subject: RELEASE: 2002-047: FORMER NASA CONTRACTOR PLEADS GUILTY TO SENDING THREATENING E-MAIL

On March 4, 2002, Douglas F. Starfield pled guilty in the United States District Court, Clarksburg, West Virginia, to one count of transmitting communications containing threats to injure the persons of others. Starfield was formerly employed as an aerospace engineer by Galaxy Global Corporation, Inc., at NASA's Independent Verification and Validation (IVV) facility in Fairmont, West Virginia.

Starfield was indicted on July 10, 2001 for allegedly sending several threatening electronic mail messages from his NASA computer system at the IVV facility between December 2000 and January 2001. The messages allegedly contained implied and direct threats of bodily harm against then President-elect George W. Bush, the Sheriff of Humboldt County,
California, and the Chief Executive Officer (CEO) of Boise Cascade Corporation. Starfield pled guilty to sending a threatening message to the CEO of Boise Cascade.

Starfield faces possible penalties of five years imprisonment and a $250,000 fine. His sentencing has been scheduled for May 2002.

Special Agents from the NASA Office of Inspector General's Computer and Technology Crimes Office, Federal Bureau of Investigation, and United States Secret Service conducted the investigation. Investigators of the Marion County (West Virginia) Sheriff's Department and Fairmont (West Virginia) Police Department assisted with the investigation. The prosecution was handled by Robert McWilliams, Assistant United States
Attorney, Northern District of West Virginia, in Wheeling.

For more information on this release, please call Stephen J. Nesbitt,
Director of Operations, NASA Office of Inspector General Computer and

Technology Crimes Office at (202) 358-2576.

Sadly, they haven't updated this web page. It describes Air 1, the police copter that crashed during maintenance. It killed one officer and a maintenance man. I attended the officer's funeral. San Jose now has Air 2 and can be heard overhead many a night. I'd be nice to see a memorial page for Air 1 and the 2 that died. Also a page for the new copter Air 2 for all of us fans and supporters of the Police. Paul, that PIC is of OLD Air one, the one that crashed. You can tell by the numbers 904PD stands for Fire/Police (i.e., 904 means Fire in SJ) the new one (air Two) has DC in the numbers (I forget the rest) DC stands for Desmond Casey, the officer killed in the crash of Air One.

9835. Radio Authority threatens lawsuit

Yahoo group: bayscan (2002-01 — 2002-06)

From: robert sanford
Topic: 9835 Message: 9835

Radio Authority threatens lawsuit
Details on emergency radio plan
The Marin Emergency Radio Authority is a new $26.9 million countywide public safety radio system.

It is made up of 26 Marin public agencies, mainly police and fire departments. Public safety officials say the new system is needed to consolidate and close gaps in the county's existing public safety radio system. They also say that it is getting increasingly difficult to get spare parts for the current system.

The system will consist of microwave dishes, radio antennas and radio equipment linked at more than a dozen sites throughout Marin and Sonoma counties.

There has been stiff resistance from residents of some neighborhoods where the antennas were planned to be built. The system was originally slated for completion by December 2001.

The system already is $1.4 million over budget. The last crucial site to secure is in southern Marin, but neighbors there say: no way. If the system is not completed by the end of the year, the Radio Authority faces high overhead costs, possibly as much as $35,000 to $50,000 per month.

Already months behind schedule and about $1.4 million over budget, the Marin Emergency Radio Authority is pushing hard to secure the last antenna site crucial to a new $26.9 million countywide public safety radio system - before high overhead costs kick in at year's end.

The authority - consisting of 26 Marin public agencies, mainly police and fire departments - has threatened to sue the town of Tiburon if it refuses it permission to build an 80-foot antenna near homes at 99½ Mt. Tiburon Road.

Martin Nichols, who was hired as the authority's new executive director in August, said the Mt. Tiburon site is the only location available that will permit the Radio Authority to begin construction in June, as it must to compete the system by the end of the year. The system was originally slated for completion in December 2001, he said.

"There have been some threats made," said Tiburon town counsel Ann Danforth.

In 2000, the Tiburon Town Council unanimously rejected the Radio Authority's request for permission to build an antenna on Mt. Tiburon. The Radio Authority chose not to appeal the decision to the Town Council.

A protracted effort to locate an antenna on an alternative site on Angel Island followed. But that initiative ultimately was rejected by the

California Department of Parks and Recreation.

Nichols acknowledged the Radio Authority has threatened to sue Tiburon, but he said it is no longer planning to do so.

"I'm glad to hear that, third-hand," Danforth said. "That was by no means clear to me."

But Nichols said the Radio Authority is contemplating taking an alternative legal action, which he is not at liberty to discuss.

Danforth said there is speculation that the Radio Authority may seek an eminent domain action to gain title to the property, which is a water tank owned by the Marin Municipal Water District. Even if such an action were successful, Danforth believes the Radio Authority would need a conditional use permit from Tiburon to erect an antenna there.

Nichols said, "What we're talking about is developing a strategy that will allow us to build on the site without having to go through the town planning process." He would not say, however, if an eminent domain action is part of that strategy.

Tiburon Councilman Andrew Thompson said he has suggested three alternative sites to the Radio Authority - one on Wolfback Ridge above Sausalito - and two others on open space land - one just west of Gilmartin Drive overlooking Richardson Bay and the other on Sugar Loaf Drive.

"We're just waiting for MERA to make a move," Thompson said.

Nichols said all of these sites present the same problem as the Mt. Tiburon location - nearby residents are likely to object. And, these sites have additional liabilities, he said.

Some were not fully covered by the environmental impact report, so they would require additional study, which would take time and money. Others would require a general plan amendment and a zoning change by the Tiburon Town Council.

The Wolfback Ridge site would work only in tandem with an additional site - located at the Southern Marin Fire Station at 308 Reed Boulevard - doubling the cost, Nichols said. And a fourth alternative, located on open space above Old St. Hilary's Church, would require the OK of the county, he said.

Supervisor Steve Kinsey, chairman of the Radio Authority's board of directors, said he is willing to discuss alternative solutions. "But not at the expense of doing one that works for MERA within the timeline, and to date there is only one solution and that is to be on the Mt. Tiburon site," Kinsey said.

The Radio Authority is under significant financial pressure from equipment manufacturer Motorola to accelerate completion of the system, which will consist of microwave dishes, radio antennas and radio equipment linked at more than a dozen sites throughout Marin and Sonoma counties.

"If we are delayed beyond the end of the year, then Motorola is going to start charging us project overhead costs," Nichols said.

The longer the project is delayed the longer $12 million worth of electronic equipment has to be stored in a warehouse, and the longer Motorola has to keep its project staff assembled, Nichols said.

"We could be looking at some significant costs if we get delayed," he said. MERA might be required to pay $35,000 to $50,000 a month, he estimated.

The Radio Authority's contract with Motorola originally paid the company an additional $2.54 million to manage the acquisition of the antenna sites and development of the system. But as early as 2000 the authority became impatient with the speed with which Motorola was proceeding.

It has since renegotiated its contract assuming responsibility for acquiring the antenna sites in return for about a $1 million reimbursement from Motorola, Nichols said. Much of the Radio Authority's $1.4 million in unplanned spending resulted last year when five San Rafael residents mounted a legal challenge to the construction of an antenna atop San Rafael Hill, Nichols said.

Last year, Marin's civil grand jury endorsed the need for the new communications system but faulted the Radio Authority for underestimating neighborhood opposition to the antennas.

Mt. Tiburon homeowners remain vehemently opposed to construction of an antenna in their neighborhood for reasons related to aesthetics, health and money. They fear that radio frequency radiation might damage their health, that the antenna's visual presence would mar the neighborhood, and that their property values would ultimately suffer.

Tiburon resident Howard Zack, whose house is about 10 feet from the site where the Radio Authority wants to build its antenna, warns that MERA's legal strategy is "fraught with peril."

"They may well find themselves running into a hornet's nest in Tiburon," Zack said. "Between the town and the neighbors, it makes for a very formidable opponent.

" If the Radio Authority sues, Zack said it "will set off a protracted legal fight that will see June come and long pass."

That is exactly what Marin's public safety agencies don't want to see happen. Both the Marin County Police Chiefs Association and the Marin County Fire Chiefs Association have written letters to the Tiburon Town Council urging it to support the Mt. Tiburon site.

They say the new system is needed to consolidate and close gaps in the county's existing public safety radio system. And they add that it is getting increasingly difficult to get spare parts for the current system.

For example, Marin County Sheriff Bob Doyle said that when San Rafael police shot and killed a man, who was firing on them last year, Twin Cities

police, who had a vantage point to report that the assailant was down, couldn't communicate with San Rafael officers by radio.

"Any time you have any multiple agency participation on something, communication breaks down because we're not all on the same frequency," Doyle said.

"There is one common channel, and any time anyone uses that channel no one else can use it," he said. "Nor can police speak to fire," said District Attorney Paula Kamena. "It's just critical," she said. "You can't have a coordinated response to a crisis, if the people responding can't speak to each other."

9836. Yahoo! Groups service

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-03-16 07:15:57 UTC
From: robert sanford
Topic: 9836 Message: 9836

Dear Yahoo! Groups Members,

As noted on our web site earlier this week, the Yahoo! Groups service will be down for scheduled maintenance Friday March 15 9:00 PM PST (GMT-8) as we move our servers to a new facility. We expect the service to be restored the morning of Sunday March 17.

During this time the web site will be unavailable and email will not be delivered. (Some users may experience email non-delivery notices, but all email should be delivered once service has resumed.) Please note: Once the service is back up, there will be email delays due to backlog. We expect these delays to last no longer than 1 day. Please do not to re-send email to your group as it will only add to delays.

We apologize for any inconvenience this may cause.

The Yahoo! Groups Team

From what I can gather by listening to Richmond Fire Dept and riding past the scene there was a pretty huge fire at a construction site for new homes and condos in the city of Richmond. I think they got the first call at 12:08:59 this afternoon and called out mutual aid and requested strike teams, this was about an 1/2 hour to 1 hour later, as of now they are still on scene putting out hot spots and overhaul, and releasing a lot of the mutual aid units.

Hello Les,

I live about three miles south-southeast of the I505/I80 junction. My location got sacked with ice, hail, snow, then rain. We also had severe winds and thunder/lightning. But I was unable to spot a tornado nor a funnel cloud. Our county fire (on 156.000 Mhz) dispatched units for "Tornado Watch". Kind of exciting yet scary at the same time. As for Mike Peckner, that would be fun to get paid for chasing them things.

I'm now in the habit of setting my scanner up at night to record a few channels. Usually, it's nothing, but occasionally you get some interesting calls. This one came sometime last night on Mountain View Fire (and I'll possibly put this on my web site).

Call comes in reporting an injury accident - NB 101 @ Moffett. Multiple vehicles, multiple overturns.
Pre on-scene report that there's 2-3 vehicles , and one truck - unknown pickup or commercial.
then an update Delivery type truck and a total of 9 vehicles.
Engine 4 arrives - NB 101 JNO Ellis - Confirms multiple vehicles, multiple overturns.
Engine 4 then advises it's a flatbed type carrier carrying salvaged cars that t/c'd spilling its contents, creating a t/c with multiple 'overturned' vehicles.

Just thought I'd share one of the more humerous events here. :)

I'm a new list member since I only recently relocated to Daly City from Cleveland, Ohio. Guess now is as good a time to chime in as any.

I was at the Daly City multiple and it was indeed a 4th alarm. I missed the actual call for the 4th since my handheld went out during the fire, but when I got back home and was listening to the move-ups/relocations Control-21 did advise the units that the Daly City fire was now a 4th. Firedispatch.com also listed it as a 4th since I checked that when I got home too.

I didn't get any video since my videocamera is still packed up, but I did manage to grab a few stills. I didn't know there were fatalities till I saw the news today.

9856. Trunk-Tracking Help Request

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-03-19 11:43:03 UTC
From: Scott Baldwin
Topic: 9856 Message: 9856

Hello to the list.

I'm trying to set up my BC-245 and BC-895 to track the trunking system at the Vacaville CMF Prison site. Their frequencies are 857-860.2625.

I started off in E2 mode, and noticed the ID's changed between radio users. So I assume it to be a Type-1 system. Setting it in E1 Mode, I chose S-14 as my size. Even though this is an unusual size, I chose it because I had caught traffic with an ID of 37217 and the reply came back on 34135.

Using the method of lowest ID and highest ID, the difference is 3082, meaning at least THAT many users used block 4. Since S-13 has a max of 2048 users, and S-14 is the next with 4096 users, for this reason I chose S-14.

Now here's my problem. I was monitoring the other day and a call came out with an ID of 000-9 and a reply came back on 000-8. It was the same conversation. My BC-245 was still set on E2, and I noted ID 38374 and 34267, respectively. The problem as you can see is that the number of IDS (difference between the two) is 4107. This exceeds the max of 4096 as used for a Type 1.

Does anyone know what kind of system this is, if it's not Type-1 or Type-2? I have tried Edacs and LTR, but I either don't know how to set these systems up in my scanner, or they're not that either, as I've tried programming them in, but they don't track at all. It's as if they don't see the control channel.

Thanks in advance.
Scott

Around 1:00 today(3/19) Livermore P.D. working an armed 211 downtown
..Looking for suspect.. About a $500-700 take.. L/P trunked system..

9860. NORTH TREE FIRE

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-03-20 00:34:26 UTC
From: Pam & Jeff Schiller
Topic: 9860 Message: 9860

Been seeing lots of equipment down on the Monterey Penninsula looked in to
it been seeing a repair service truck and Com 209 a nice Command ford bronco
and came across this site
http://www.northtreefire.com/ blue fire trucks
does anybody know more freq.s and so on
.....I guess its a private contractor
fire department.

9861. Re: [bayscan] NORTH TREE FIRE

From: Bundy Chanock
Topic: 9860 Message: 9861

They are indeed a private contractor. A friend of mine runs the business. Also, the very best Motorola installs in Northern California. I bring my personal vehicle all the way from SF to Monterey, just to let them install and work on all of my Motorola mobiles.

It's a contract/CWN fire company with bases at Fort Ord, Marysville, Truckee, and Corona. Their main offices are at Fort Ord, as well as their training facilities. They have a great bunch of instructors, who have been teaching for quite a while. I've taken a few of their classes, and find them to be extremely worthwhile.

They probably have the Kenwood radios similar to the CDF radios, plus other radios programmed for whatever area they're working in.

Hey Robert, I will be creating a 415 in Sausalito this Saturday night at the Womens Club. Am playing in the Hot House swing band for some function they are having up there I think from 21:00 to midnight or so. I don't know how close you live to the place and don't have the address anyway. I could take my VX5R and talk on breaks if you give me a ham frequency. 73's, Jim

A little off the topic but I can't find anything within Yahoo-Help....Is anyone else getting a search error when you do a search within Yahoo Groups?

I keep getting the following....

"We're Sorry...
There was a problem with your request.
The page you've requested returned this error:
[search.c:921] Unable to contact Category Server.
Please contact our Customer Support staff at support@yahoogroups.com.
We apologize for this inconvenience."

Thanks,
Brian

They aren't exactly evacuating the schools. Just having officers respond, especially to the grade and middle schools to reassure principals,teachers,parents and the kids that there is no danger, apparently they are no loose perps in this incident as far as I have heard

I recall San Jose lost an officer last year on one of these traffic stops. A good thing most people can't shoot as well as a cop can.

For those who haven't seen the evening news. The female officer was pinned between her patrol vehicle and the suspects car. she fired hitting him and he apparently lost control or something and his vehicle ended up in a creek. Both were transported to Stanford ER (right up the St.) he was DOA, she apparently had minor injuries and was released.

The Impala's have been rolling over dead in large numbers. So the CHP will continue to using the Crown Vic's as black and whites.

But...
Some new code enforcement cars are being prepared. Two or three cars will be in the bay area soon ...

Look for a white Camaro.

Yeah, because you won't catch anything in a Vic! The Caprice was an
excellent pursuit car, too bad they won't keep them going.

The caprice was a good in town car with the transmission and rear end gearing. Like all chev. fast in town, but die on the freeway. I never thought they handled the well. You never wanted to crash one, they fell apart like a potato chip.

The impala's are fast, they just die quickly with all kind of mixed problems. But so did the volvo's, what a joke. They lost real money with the buy back program. Ford cleaned up Jag but they still have some work on Volvo.

Only time will tell if the new camaro survive, they were junk the last time.

Never lost to may people in a vic, you just need to know how drive. The newer motor's after 97 / 98 cleaned up the other engine and intake problems. The locking converter is a little strange to get use to, but ounce you do, it hard to drive without one. They are heavy, but if you ever needed to bump a car, they hold up well very little body damage.

Ford has wanted to kill the Vic for years. They say there no money on them, well they just do not make as much money as Trucks or SUV's.

The CHP do not want front wheel drive.. Not many choices left.

I recall my neighbor (who at the time sold Chevys) said several years ago that GM decided it wasn't worthwhile marketing the police special Caprices and then discontinued the production option. Supposedly, they were going to still have something like the Suburban or Blazer available with the package.

I see Fremont PD driving many Tahoes(?) with what looks like a typical
police package. I've seen similar from CHP. Dunno about actual engine
upgrades like the 9C1 is to the Caprice.

Russ,

The SO was working on changing over all their freq's to digital about 1-2 years ago. After much work and many headaches they decided to scrap the project except for Freq. 2 which is still in digital mode today. There are no plans at this time to bring back the project of digitizing all freq's.

Are you hearing anything different? What's this about "fire"?

Cupertino is still on 2, in digital mode. along with Los Altos Hills,
Saratoga, and misc westside areas.
'digital 3' is still just that, a digital tactical channel.

I can only offer an educated guess-
SO 1 (156.21) has many users/access capable beyond the SO
(parks, corrections, probation, transit...)
whereas SO 2 is more specific, geographically and use,
and is less of a common user channel.

I'm gone for the weekend...

As long as its not encrypted they should. But for me, that certainly isn't enough reason to buy the card. Although I probably will get the 250D, because I really liked the 245 and adding CTCSS and Alpha-numerics is added incentive to me, I don't need a $300+ card for just SCSO channels 2 and 3 , to me the cost is not justified. SFPD while with some digital has already started switching them to encrypted so they won't work there. Unless there are plenty more depts going to straight digital (i.e., no encryption) I won't get the card. Now if I lived in Los Angeles, it would be different.

9932. NYPD Audio from 9/11

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-03-22 21:09:37 UTC
From: robert sanford
Topic: 9932 Message: 9932

My mom said she heard something today on television about a show that was going to broadcast some of the 9/11 audio from the NYPD that has never been heard before.

Only problem is she cannot remember what station she heard the promo for. I checked Dateline and 20/20 for tonight and they dont mention anything about it.
She seems to think it might have been FOX also.

Anyone heard anything about this program???

Thanks

Robert

9945. CHP, Suspects Collide in Antioch

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-03-26 16:24:16 UTC
From: robert sanford
Topic: 9945 Message: 9945

Guess I missed this one last night, I guess it happened pretty late:

CHP, Suspects Collide in Antioch
03.26.02

ANTIOCH -(AP) -- Two Highway Patrol officers and three fleeing suspects were injured early Tuesday in a head-on collision in Antioch.

Authorities say the patrol officers began chasing the suspects' Ford Mustang on Highway 4 at Railroad Avenue in Pittsburg. The chase proceeded east to Antioch.

There, the suspects apparently spun out and then headed back in the direction they came from before colliding head-on with the CHP car on Hillcrest Avenue.

The officers were treated at Sutter Delta Medical Center and released. The three suspects also were treated at Sutter Delta, but they're heading for jail.

Hazmat was NOT at SF Airport. It was at Airport blvd and Baden ,
right down the st. from South SF Fire Station 61. It was a 1 gallon
jug of some type of acid. I doubt it will go late tonight, if fact it
is no longer on the firedispatch.com screen.

Calif. Children Killed in Apparent Murder-Suicide
Tue Mar 26, 5:41 PM ET

MERCED, Calif. (Reuters) - A former California sheriff's deputy shot and killed his ex-wife's four children -- including his own 5-year-old daughter -- on Tuesday before killing himself in an apparent suicide, police said.

Slideshows

AP Photo
California Man Kills Children, Self

Merced County Sheriff's Department Sgt. Tom Cavallero said 49-year-old John Hogan apparently waited until his ex-wife Christine McFadden went out for a morning walk before launching his murderous rampage at her home in Merced, about 130 miles east of San Francisco.

When she returned, McFadden found the bodies of her three children from a previous marriage -- a 17-year-old daughter shot dead in the hallway and two sons, 15 and 14, killed in their bedrooms.

Hogan's body was found in the master bedroom, holding the couple's murdered 5-year-old daughter, Cavallero said.

The couple had been divorced for about a year and Cavallero said authorities were still trying to determine a motive for the shooting. Hogan was a former sheriff's deputy in Santa Clara County.

"I'm not aware of any recent history (with Hogan) at all," Cavallero said. "But obviously we don't have all the information yet."

9958. Scanning for Terrorism

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-03-27 22:19:06 UTC
From: diamondback502
Topic: 9958 Message: 9958

One important note. no matter if a terrorist attack , bad storm or whatever. Keep in mind ,if you lose your power 1) those AC scanners become useless. Yes ,it they are mobile/base you can always run out and monitor from your car. But here is the one most important reason I bought the Pro93.....regular batteries. While i use rechargables normally, I always carry the black battery pack with normal batts. in it (just in case) While, as i previously mentioned , prefer the Uniden....that battery pack is going to eventually die. Unless you have a charged back-up set, your in dead silence and I KNOW that would drive 99% of the people on this list crazy. I wish Uniden would switch, but doubt they will.Again, this wouldn't be a bad idea to have a 2nd HH (with reg batterys) available..don't need the real expensive ones, 30 - 50 channels would do it BUT regular batterys.(disclaimer - no , I don't work for RS)
Ed

9961. Two odd observations from Livermore

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-03-28 06:27:50 UTC
From: Reno Lamb
Topic: 9961 Message: 9961

I was referred over here from SCANnorCAL, where I stumped folks with the questions below. I've noticed a few oddities in local trunking and wonder if anyone else has too.

1) LPD/LPFD/PPD/ect all share one Motorola trunked system. I've found and stored about 20 talk ID groups in my scanners (pro-92b, pro-2067). I scan about 10 of them and lock the rest out. The anomaly I've noted is that occasionally a talk ID group will show up on my scanner with a display of MOT, indicating that it has not been stored yet. But it is in fact already stored, and as I keep that bank in closed mode, if it were not stored yet it would not be audible. Most of them also have text tags. This has persisted now in three scanners (I returned the first pro-92b as it had issues). So this is either a firmware bug in the pro-92/2067, or something odd in the trunking system itself. Any ideas?

2) ALCO has a trunked system that serves numerous county agencies. I've found and stored upwards of 30 talk group Ids so far. I still have that bank open because I don't believe I've found and stored all the IDs yet. The anomaly I've noted is that often SO dispatches (both east and west) come thru on the scanner as if they were not in a trunked system. The tranx has no talk group ID when it comes in, but it comes in on one of several of the trunked channels. I wonder if this is a bug in the scanner (I primarily use the pro-92 to scan ALCO), or if they are doing something odd in their use of the Motorola trunking system. If those tranx are indeed not trunked, then when I close that bank I won't be able to hear SO dispatch?which would be a suboptimal situation.

Tri-Valley = Livermore/Pleasanton/Dublin/SanRamon area
LPD = Livermore PD
LPFD = Livermore/Pleasanton FD
PPD = Pleasanton PD
ALCO = Alameda County
ACSO = Alameda County SO
CCSO = Contra Costa SO
PD = police department
FD = fire department
SO = sheriff's office

You can get gel cells with cigarette outlets for back-up power. Frys, Costco, Wallymart, etc. [I don't know if Best Buy sells them, but something tells me I better plug them as well.]

Here is what one looks like:

www.sjpd.org had about 6-7 pics of Air Two. check the drop down menu for " Air Support " . It includes a tribute to Officer Desmond Casey who was killed in the crash of Air One. The numbers on the new chopper is 408DC , the area code for San Jose and DC for Desmond Casey. A reminder , Santa Clara County Sheriffs will be getting a chopper , possibly by the summer.

Hello to the list!

Well, I thought I'd post a progress report. For those who have tried to scan this trunk system, located at the California Medical Facility (CMF) in Vacaville, Solano County, you know the mapping is a pain in the butt.

What I did was finally got the notion to tap the discriminator of my BC-895. I didn't use the Pin-9 tap, but a different one which is proclaimed to be the TRUE discriminator tap point. Then I built a data slicer based on the TLO-82 chip. Hooked everything up to my PC, with the BC-895 data sliced on port Com1, and my BC-245 controlled on port 2 via the "Trunker" program.

The thing I'm seeing is the system type (which appears in the top left corner) is toggling between Type-I and Type-II. I'm assuming then that this is a hybrid system with both Types utilizing the same frequency sets. So now I'm playing with map sizes, specifying each block as I go.

I'll post more as I crack this beast.

OPD working some kind of SWAT incident around 59 and Shattuck. perp broke out windows . K9 and extra batteries requested. This may have been going for sometime, I caught it when an AMR rig mentioned (on ALCO , of course) that OPD had streets blocked in the area. Being worked on Patrol 1 (02-021). I can't get OPD in the house, soooooo got to run guys, can get it from the car when I am parked near the bay :-) This is near some park, some park rangers are involved somehow.

Hi Scott,

I've seen Trunker goof sometimes when guessing blocks as I or II.
Typically IIi calls cause this. Run Treport on it and see if you get
any IIi call grants. If you take the group portion Treport gives you,
you can use that to determine sizecodes based on the lack of radio id
(Zeros are sent in the radio id's place).

9986. A bit off topic ... "dangerous driver who was losing his doughnuts"

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-03-29 21:30:48 UTC
From: gary
Topic: 9986 Message: 9986

SLIDELL, Louisiana (Reuters) -- Two people left a 15-mile-long- trail of doughnuts after they took a Krispy Kreme truck from a parking lot and fled, police said Thursday.

The truck was parked at a convenience store with its rear doors open and engine running while a deliveryman carried doughnuts inside, said Slidell police spokesman Rob Callahan.

Two suspects hopped in the truck and sped off to the nearby town of Lacombe, with doughnuts spilling out along the way, he said.

They abandoned the truck when they were spotted by police responding to reports of a dangerous driver who was losing his doughnuts. Passenger Rose Houk, 31, was captured, but the driver, whose name was not released, ran away.

Houk told police they had been smoking crack cocaine for several hours before the incident, which occurred Wednesday, said Callahan.

Their motive for taking the Krispy Kreme truck was unclear.

"I don't know if it was a need for transportation or if they just had the munchies," he said.

9987. Vallejo Times Article

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-03-29 21:44:57 UTC
From: robert sanford
Topic: 9987 Message: 9987

There is an article in the Vallejo Times today that I helped with, here is the story:

By KYLE HOPKINS
Times-Herald staff writer

In living rooms across the Vallejo area, residents listen to police chase criminals and firefighters race to emergencies between the squawking and hissing of radio scanners.

Sausalito resident Robert Sanford, 44, uses roughly 12 scanners to monitor Bay Area law enforcement activity. Those exchanges he considers the most interesting are offered as sound files on his Web site, bayscan1.50megs.com

☐There☐s more people doing this than you☐d think,☐ said Sanford, who described Vallejo as a fairly active area in the Bay Area. ☐It☐s kind of real-life drama.☐

Scanners, normally about the size of a brick and selling new for $100 to $250, pick up radio traffic from police and fire departments, plus the odd Coast Guard dispatch or Taco Bell drive-thru order.
Tuning in can become addictive, listeners said.

☐(It☐s) just one of those things. You start listening to it, you pretty much well get hooked to it because there☐s a lot of stuff going on out there,☐ said American Canyon resident Tom Rhodd, 30.

Rhodd uses a Radio Shack scanner he inherited from his father 10 years ago. A book of codes lets him know what channels or frequencies to tune in.

Rhodd☐s wife, Mandy, uses the scanner to hear where accidents occurred, where traffic congestion may be and to make sure sirens she hears aren☐t headed to the home of a loved one.

At Sanford☐s Web site, visitors find a list of audio files recorded from area crimes, chases and emergencies, with titles like ☐Nice Chase in San Mateo☐ and ☐Shooting in Vallejo on 1/21 then MAJOR crowd problems.☐

A ham radio operator and former New Yorker, Sanford also operates a listserv, or online discussion group, for Bay Area computer users interested in scanner activity. Subscribers to the listserv range from dispatchers to media, he said.

Now a supervisor at Best Buy, he once considered a career as a police officer and said he respects the profession. ☐It☐s not an easy job. It☐s a thankless job,☐ Sanford said.

Under scrutiny

Providing officers with information quickly and easily ☐ over the radio ☐ has the drawback of tipping off criminals who may be listening to handheld scanners: Units are on the way.

☐Drug dealers frequently have scanners so they can listen to when the police are coming,☐ said Lt. JoAnn West, Vallejo Police Department.

Officers and dispatchers tailor their communications to keep some information off the air.
☐I think everyone is very aware of the fact that there are scanners out there and people are listening. If there☐s a sensitive message, you have them call in to get information. It certainly impacts how we dispatch some calls,☐ West said.

To solve the problem, police sometimes use encrypted channels, cell phones or computer messaging to relay information. When serving search warrants, dispatchers refrain from using the address over the radio.

☐When it comes to a critical incident that you☐re working, you really have no choice because it☐s time sensitive. The fact that the suspect could be listening in on a shooting that just occurred, if the suspect happens to have a scanner ... that hampers us because he☐s got the information that we have.☐

A new system is in the works for the Vallejo department which would reduce voice traffic and increase the amount of dispatching done over computers, West said.

The department is considering different vendors and determining which computer system to buy.
☐The only things that will go over the air will be priority and in-progress calls that we need to get out to everyone,☐ she said. ☐We have such a high volume of traffic right now and we basically only have one channel to dispatch all of our calls over.☐

For police, the advantage of this system will be keeping the air clear for critical incidents and sending more information to the officers who need it most.

Keeping an ear out

The Radio Shack at 918 Admiral Callaghan Lane sells maybe two or three scanners a week, said former assistant manager Jerald Johnson.

Johnson last used a scanner about three weeks ago, he said, programming the unit for a neighbor.
☐(My neighbor) uses it to listen to fire and ambulance and people. He☐s wheelchair bound and wants to know what☐s happening in the world,☐ Johnson said.

In American Canyon, a scanner listener helped police catch the robber of a Starbucks in February. The listener made an anonymous call to the Napa County Sheriff□s Department, notifying sheriffs the man was hiding near his or her building.

If it weren□t for that call, the suspect may not have been caught, said Napa County Sgt. Mike Clark.

I know you're kidding, but approach speed is about 134kt ... what I meant by that was it didn't look like it was either a) transiting or b) catching up to something. It was also fairly low, and not an a standard route that you see planes flying around the bay.

Subject: [bayscan] A bit off topic ... "dangerous driver who was losing his doughnuts"

SLIDELL, Louisiana (Reuters) -- Two people left a 15-mile-long- trail of doughnuts after they took a Krispy Kreme truck from a parking lot and fled, police said Thursday.

The truck was parked at a convenience store with its rear doors open and engine running while a deliveryman carried doughnuts inside, said Slidell police spokesman Rob Callahan.

Two suspects hopped in the truck and sped off to the nearby town of Lacombe, with doughnuts spilling out along the way, he said.

They abandoned the truck when they were spotted by police responding to reports of a dangerous driver who was losing his doughnuts. Passenger Rose Houk, 31, was captured, but the driver, whose name was not released, ran away.

Houk told police they had been smoking crack cocaine for several hours before the incident, which occurred Wednesday, said Callahan.

Their motive for taking the Krispy Kreme truck was unclear.

"I don't know if it was a need for transportation or if they just had the munchies," he said.

Yep. And last week police were looking for a stolen car which had last been reported southbound on my street in San Francisco moments before. I looked out the window and sure enough, the theives had parked in front of my neighbor's house. A quick call to 911 and they were in custody (very dramatic felony stop -- I always worry that something's going to go wrong and I'll feel partially responsible).

You need to stay focused, Eric. Chasing down and apprehending the criminals can result in a commendation in addition to the payload of clean donuts left in the truck while you wait 45 minutes for the tow truck and fill out paperwork back at the station for the rest of the shift.

I saw a license plate frame yesterday: "Don't stop me, I have no donuts".

(Hey! I support our local LEOs, but I support a sense of humor too.)

F/A-18's are seen pretty often around the Golden Gate. I've hiked around the Marin (hottubistan) headlands and see them pretty often, though always in pairs for whatever reason. I would imagine some wandering into Berserkly wouldn't be that unusual since it isn't that far away.

I don't know exactly how slow they can fly. At airshows, fighter planes do a low speed fly-by with the body angled to give the plane more lift than the wings alone could provide. It looks very slow to the person on the ground.

There's actually a total of four control channels though the other two
are rarely used. (Might as well know them if using control mode) Only
in the event the first two common ones fail/disable will the
controller fallback on the third, which I have seen before. ALCO is
real picky about illegal carriers on the system's input freqs and
frequently disables and re-enables channels.

These are the possible control channels:
01 866.9375
02 868.0875
03 868.7625
04 867.4000 (Unverified)

I'm here in Dublin so I'll keep an ear on East County Fire. SO is
coming in fine though.

It's possible they set them up for overflow traffic. It's an easy way
to determine how busy the system gets if you track usage of the
channels. (Dumb idea since the system's been around awhile but ya
never know)

There's actually a total of four control channels though the other two are rarely used. (Might as well know them if using control mode) Only in the event the first two common ones fail/disable will the controller fallback on the third, which I have seen before. ALCO is real picky about illegal carriers on the system's input freqs and frequently disables and re-enables channels.

These are the possible control channels:
01 866.9375
02 868.0875
03 868.7625
04 867.4000 (Unverified)

I'm here in Dublin so I'll keep an ear on East County Fire. SO is coming in fine though.

If you track it as one system (I setup WIDE and LOCAL in different
banks), then putting them all in would be best.

We're pretty up to date in making it known (to the list) when they add
new frequencies so I wouldn't worry about CC mode. CC mode is more for
large networked systems (SmartZone) where you can simply throw all the
control channels in a bank and trunk on whichever one is receivable.
You don't have to fill up channels with frequencies being every site
in the network has its own frequencies. For example, the San Mateo
trunked system (Whenever it goes live as it wasn't a few weeks ago)
will be a SmartZone network, though each site won't have that many
frequencies being used.

They're out (Via FCC database) but being the network isn't online yet
we can't get the base and spacing.

Take a look at http://www.trunkedradio.net/cgi-bin/display.pl?sid=1138
for more information. Those may or may not be the correct site
numbers.

What scanner are we talking about? Basically, you are restricted to
the trunking type and band per bank. It's best practice to put one
system in one bank. You can do more than one system in one bank but
the scanner will park on the first control channel it finds.

Hello to the list!

I thought I'd post this to each of the Yahoo groups I belong to. The instructions below discuss how to remedy the situation. However if you do not use Yahoo mail, and have set your ISP e-mail address to receive group postings, you'll want to go to http://groups.yahoo.com/ log in and then click on the "Account Info" at the top of this list. Read on:

Yahoo is gearing up to send out the worst spam attack in years! You may remember when you signed up for Yahoo ID and were asked by them if you wished to receive any "Special Offers & Marketing Communications." Yahoo recently revised their privacy policy. As a result, and regardless if you chose to receive any of these "Special Offers" or not when you signed up for your Yahoo ID, Yahoo has set every single person who has a Yahoo ID (and those that have more than one) to "Yes" in these preferences. This means that you may well be inundated with even more junk mail than you are already receiving. In order ! to change your settings back to whatever you had them at before, you will need to log in to your account and physically change them. Log into your Yahoo account, click "Options" on left side, then select "Account Information" - you will be asked to enter your password again. Middle segment within Member Information (email addresses) section has a link to: Edit your marketing references. Click on this link and you will see all of your settings were changed to "Yes." Meaning of course that you will receive all kinds of "offers" from Yahoo and their "partners." Unless you wish to receive even more junk mail than you are already getting, you may wish to go through the entire page and choose whether to receive such notices. Also, right at the bottom of page are other ways you could be notified - by phone or postal mail. Unless you wish to receive unsolicited phone calls and paper junk mail, you'll need to also change these settings to "No". Once you have finished your selections,! make sure you click on Save Changes button right at the bottom of page. Yahoo is supposedly sending out notices to all its users regarding this particular change. However, it is estimated it will take several weeks for everyone to receive their notification. In the meantime...a considerable amount of marketing mail could be making its way to everyone's mail boxes and email addresses onto spammers lists and passed on and on to even more spammers!

10039. Big Sideshow in Vallejo

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-03-31 04:17:39 UTC
From: robert sanford
Topic: 10039 Message: 10039

Sounds like there is a group of 100 vehicles involved in some sort of sideshow and the
Vallejo PD are trying to get things under control now.

Seems a bit early for one. Those things usually start much later and in Oakland.

Vallejo PD-155.910

10040. What on earth is a side show?

From what I've seen on TV, the sideshows are just lots of cars burning rubber and teenagers acting in a somewhat less than desirable manner. A bit more rowdy (sp) than cruising.

RIC or RIT as they say here in Sacto is the Rapid
Intervention Crew/Team

This is part of the 2 in 2 out safety. RIT is FF's in
full gear, BA'd, charged line ready to go in if there
is a Mayday.

Yeah I think the whole things seems so stupid and "ghetto" as the kids
would say today.

I mean when I was a kid we would at least block off a major road and have
drag races, now that was fun. I remember blocking off a MAJOR highway in
New York to do it.
We even had lookouts for the cops, but no scanners lol.

PS-Many of the kids at my job that attend them in Oakland have asked me
about scanners but when I start talking about needing a trunked scanner and
start getting into it I kind of talk them out of it.
Personally its because I dont want them having the heads up on the cops.

From: haywardmike
Topic: 10040 Message: 10046

These "harmless" fun activities have led to a number of serious accidents in the bay area. Recently one of the Oakland sideshow participants hit a car broadside in an intersection and killed a young woman passenger.

Last week three 15/16 year old boys died on Union City Blvd. when the driver lost control and hit a concrete abutment at/above 70 mph.

Several months ago another out-of-control dude hit a car (hit & run) about 500 feet from my front door in Hayward and killed a passenger. "D" Street is covered with wheelie/donut marks in the area where the collision occurred.

And the beat goes on...

Sounds like plain old lawlessness to me. Let's hope our hard working men in blue slap the cuffs on those involved in dangerous side show activity.

Cr*p like this is one reason I don't go out much at night anymore. Getting woken up every day at 0dark30 by my high energy kids is another!

>Why is the finger being pointed at us teenagers only?

A fair question. It's because most of us remember how wild we were ourselves, when we were teenagers.

10050. Oakland Airport - United

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-03-31 18:18:19 UTC
From: Kevin Gallagher
Topic: 10050 Message: 10050

The United Airlines trunked system at the Oakland Airport
is a 5 freq system in the 460.675 - 460.875 range.

Is it necessary to program a different Base Frequency?
(default is 406.000)
Offset? (default is 380)
Step size? (default is 25)

I've not programmed a 400 Mhz system before so I may
be overlooking the obvious.

The scanner is a Pro-93.

Thanks
Kevin

Seems there is an evacuation at the Golden Gate Dispatch center.
The dispatchers just got on the air with the alarm audible in the
background that they were evacuating the building due to a fire alarm and
were notifying all the offices to have someone man the base for each area.
ie Marin, Oakland, etc etc..

10052. Re: CHP evacuation

Yes, I notice they had no incidents added between 11:22 and 11:46am;
not an excessively long gap, but a bit of a down-spike; and there are
about 5 "missing" incident numbers from that tme period. Sounds like a
minor hiccup.

LAPD has a seemingly similar procedure in the event the CDC goes down
completely, where each station takes over dispatching for their
division. I'll see what I can find, if anyone cares.

This is some pretty interesting monitoring.

Its very interesting to here the SWAT team going through the procedure of laying out all sides of the residence and getting prepared to make entry.

Im recording this of course and can post it later when its over.

Use multiple receivers; there's a lot not on 1.

It is too far away from me to monitor, but I assume swat is declaring the "a" side, "b' side, etc, then checking to see who is in the line of fire, etc. All four sides get snipers, one side gets the guy with the tear gas grenade gun. Is there anything different about this swat action?

The only thing I haven't noticed to be consistent amongst swat events is the names of the team members. Some get callsigns (like Sierra 1 for sniper number 1), while other swat teams just call everyone by their last name. Some swat teams have throat microphones, which you can tell by the lack of background noise.

It is also interesting to hear them getting dimensions of the target and the location and size of windows. Do they want to know volume for how much tear gas to use, if they do use tear gas? Seems logical.

I think the press conference will be pretty soon, as they have the press queued up, waiting.

I just heard 'em ask whether the windows were dual-pane or not...
second pane would affect the path of a sniper's bullet.

Here's the info you're looking for regarding base and spacing, plus a
few groups. The ones that say digital shouldn't be in there so ignore
them.

They routinely snatch the phone line to the house via the phone company to prevent the culprit from calling the media, making strange ransom demands, etc. One good reason to keep a cell phone handy if you plan on being barricaded. Just ask the "old man".

BTW,Darryl Gates came up with the idea of SWAT.

Does anyone recall the old SWAT TV show.

Reach is _apparently_ on the ground there. Wanted a tacitcal
frequency from Henry One to talk direct; 131.87. I think this is the
short form of 131.875. I am not hearing anything on this, as H1 was
on his way from Lake County and likely below my radio horizon from
Rohnert Park.

Structure fire under control 1411

The voter? I can hear the end tone of the voter on SO Central but I'm unsure if it's the same thing you're hearing as I can't get SO West here. For example, when Dispatch quickly answers a call from a field unit before the carrier drops you'll here a quick chirp, which comes from the voting network.

There was an accident today in the Marin Headlands near the Golden Gate Bridge and they needed to transport the victim via chopper.

REACH was en route but had some mechanical problems but the CHP chopper was in the area so they responded to assist. I just happened to be right near the LZ so I got there and got some great shots of the CHP chopper.
I uploaded them to this site:

I always assumed a repeater was used so that a recording of the event could be made. [Sometimes the swat team needs to terminate with extreme prejudice, and the recording makes a good log of the events.]

Could be, Gary. And perhaps if they're REALLY on the ball they all
listen on the input side (simplex) so they're all up-close and personal.
Crawling in ditches and gutters, with a radio strapped right against
your body doesn't make hitting a repeater any kind of a sure thing.

Just heard on KGO at around 8:40 there is a manhunt in Dublin along the 580 corridor and the other sie in Pleasanton. Officers are looking foe a man who kidnapped a woman in Ceres and told her to drive him to Oakland. Around the Hacienda exit on 580 in Dublin I guess she injured him or something insued and he fled on foot and they are currently searching for him. I'm at work and don't have my scanner, anyone else hearing this or have any updates???

Your post suggests that CHP choppers can also do medical evacuation. I wasn't aware of that fact.

I monitored traffic about lifting off a CHP bird from Napa this morning about 0715. They were concerned about the weather there. Perhaps this was related to the same incident.

We used FIVE, count 'em, FIVE medical evacuation helicopters for two different wrecks on Saturday in Livermore. Most of the victims were children. One was a 3-mos infant who was NOT restrained. The baby was rushed out in shock with a pulse of 230. Not good. WHAT was mom thinking when she put her baby in the car with no car seat? I predict prosecution for mom. The other was an SUV rollover on 580. Again, there were unrestrained victims including a young child who was ejected. I can't believe there are still people who don't wear safety belts.

CHP can do medical airlifts if needed but of course their priorities
are elsewhere. If no other bird is available they'll do it.

The new CHP copters also have short-haul capability with a side
winch/cable system to allow being dropped into a canyon or lift a
gurney basket out of a remote area to an accessible area.

To demonstrate a short haul, I have CDF Copter 205 (also trained in
short haul operations) doing a demonstration of a short haul here...
http://www.norcalscan.org/photo/fire/air/c205/index.html

Enjoy ;)

Having been a police dispatcher in my first life, them's what I prefers to listen to. But it's a pleasure to listen to a REALLY GOOD taxi dispatcher when he/she is really busy. Some of them are extraordinarily good at keeping control of dozens of units.

The old Los Angeles Yellow Cab Co had a really outstanding guy called Bob (Sweet?), who could run all four channels tied together...and it seemed like he knew every building and alley in the city. Does any LA-body here remember him? I drove occasionally as a part-time second job, and he never ceased to amaze me...

I'm curious - in those instances, who provides the medical attention? Certainly not a CHP officer - unless there's a new PSO-P (Public Safety Officer-Paramedic) classification I don't know about?

According to the FCC there is a pending license for adding those three
frequencies and reorganizing the old ones.

Seneca reservoir site will include these three freqs plus 866.7000 and
868.9625. The site on Broadway doesn't seem to include them.

And looking at the Broadway site they no longer have the those two old
freqs above listed.

>http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/uls/uls_call_res.hts?db_id=19&callsign=&ap
plication_id=1136700

Maybe they're creating two independent sites. Sometimes it's hard to
tell from an update to a previous license.

Has anyone found more than one EDACS control channel out of all of
Oakland's licensed freqs?

Wayne

Looks like 866.375 is now used as a CC for Seneca and has a different SysID. Also it appears only Public Safety TGs are used.

Here are the frequency pairs in the VHF Taxi Service. 152.xxx is the base and 157.xxx is the mobile

152.270 157.430
152.285 157.545
152.300 157.560
152.315 157.575
152.330 157.590
152.345 157.605
152.360 157.620
152.375 157.635
152.390 157.650
152.405 157.665
152.420 157.680
152.435 157.695
152.450 157.710
152.465 157.725
There you go -- all the VHF freq pairs in the Taxi Radio Service.

Somewhat related, on the Stanford campus, you can go into the Jonson library and read many of the police training manuals. There is a section of California documents, though most of the library is dedicated to US government documents.

Topic: 10131 Message: 10133

Many baby monitors are in the "old" cordless phone handset freqs,
between 49.61 and 49.99 Mhz

Costco, Target and the like can often be found on the VHF business freqs
between 151.5 and 151.955, and 154.515 to 154.60; probably use Nextel
and splinter freqs in the 460-band too.

Harry

Cordless phones are illegal to monitor. The reason those frequencies are not blocked like cellular is that no one has the money to lobby to get them blocked, unlike the money-rich wireless industry.

10138. Re: [bayscan] Re: Frequency

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-04-02 08:03:14 UTC
From: Harry Marnell
Topic: 10131 Message: 10138

Yep, cordless too:

From 18 USC Sec. 2511, as amended through 1/26/98

"(4)(a) Except as provided in paragraph (b) of this subsection or
in subsection (5), whoever violates subsection (1) of this section
shall be fined under this title or imprisoned not more than five
years, or both....

"...(ii) if the communication is the radio portion of a cellular
telephone communication, a cordless telephone communication that
is transmitted between the cordless telephone handset and the
base unit, a public land mobile radio service communication or a
paging service communication, the offender shall be fined under
this title."

[that's FINED as opposed so possible imprisonment for some violations of the ECPA - harry]

And the California Penal Code is even tougher:

632.6. (a) Every person who, maliciously and without the consent of
all parties to the communication, intercepts, receives, or assists
in intercepting or receiving a communication transmitted between
cordless telephones as defined in subdivision (c), between any
cordless telephone and a landline telephone, or between a cordless
telephone and a cellular telephone shall be punished by a fine not
exceeding two thousand five hundred dollars ($2,500), by imprisonment
in the county jail not exceeding one year, or in the state prison,
or by both that fine and imprisonment. If the person has been
convicted previously of a violation of Section 631, 632, 632.5,
632.7, or 636, the person shall be punished by a fine not exceeding
ten thousand dollars ($10,000), or by imprisonment in the county jail
not exceeding one year, or in the state prison, or by both that fine
and imprisonment.
...
(c) As used in this section and in Section 635, "cordless
telephone" means a two-way low power communication system consisting
of two parts--a "base" unit which connects to the public switched
telephone network and a handset or "remote" unit--which are connected
by a radio link and authorized by the Federal Communications
Commission to operate in the frequency bandwidths reserved for
cordless telephones.

From: reno_huskerdu
Topic: 10140 Message: 10140

EMR is just the first class in the series that leads to EMT. EMT is another year of training after EMR. I'm in EMR now. EMR is also known as First Responder, or Citizen Responder.

I was pretty sure that if CHP were now EMTs, I'd have heard about it. But it would be a pleasant surprise, as it would save a lot of lives.

There is a common a joke in EMT classes about how the CHP do CPR. It's only funny if you know advanced CPR. If anybody wants to know the joke, ask for it.

fyi//Reno

However, in a landmark case a few years back, the Supreme Court let stand the conviction of a drug dealer who got nabbed due to a tip from a scanner that overhear him making deals on the phone. Wacky!

>And the California Penal Code is even tougher:

632.6. (a) Every person who, maliciously and without the consent of all parties to the communication, intercepts, receives, or assists in intercepting or receiving a communication transmitted between cordless telephones as defined in subdivision (c), between any cordless telephone and a landline telephone, or between a cordless telephone and a cellular telephone shall be punished by a fine not exceeding two thousand five hundred dollars ($2,500), by imprisonment in the county jail not exceeding one year, or in the state prison, or by both that fine and imprisonment. If the person has been convicted previously of a violation of Section 631, 632, 632.5, 632.7, or 636, the person shall be punished by a fine not exceeding ten thousand dollars ($10,000), or by imprisonment in the county jail not exceeding one year, or in the state prison, or by both that fine and imprisonment.

I'll betcha it could have been because the scanner-guy happened on the conversation "quite innocently and accidentally" and relayed his info to the police, without further involvement. Which would have made him NOT an agent for the police, hence they were simply working on a witness' report.

A million other possibilities, I suppose, but that's been done before.

Harry (ain't no stinkin' attorney)

Hi Brian,
When you go to PGA check out that new ride DELIRIUM, it looks cool!! I used to be in a rollercoaster club. American Coaster Enthuisasts (ACE) but havn't renewd recently, anyway here are the freq's I have for PGA:
490.2625 PGA security
490.1625 PGA Maintenance
157.740 PGA Park Paging
465.900 PGA Show mics/Parade music
467.825 PGA Utility A
467.875 PGA Utility B I have no idea what the Utilities are for?

Well, good scanner and good coastering.

Yep I heard most of it. A guy had a table saw accident someplace up in the Sierras. He was being transported to Davis Hospital in Frisco (SF). His arm started bleeding too much so the ambulance stopped there on Vasco and contacted the Lab. The Lab called in LPFD.

LPFD responded, saw the guy bleeding out, and called in the helo. The word from Davis Hospital was that no helos are allowed in Frisco (guess they're more worried about enforcing diversity than saving lives), but they sent that helicopter directly there anyway.

The incident raises a few questions.
1) Why would a guy with such a serious injury go via land transport?
2) Don't they have great hospitals closer, in Sacto?
3) Why did Davis Hospital say no helos allowed?
$) What happened when that helo got there?

As usual, LPFD was swift and efficient. Livermore/Pleasanton is the place to need EMS.

There was a post a week or so ago about Fremont Fire switching to single digits (i.e. Engine 4 Truck 7) vrs the 4 digit stuff that most F.D.s use in Alameda County. I e-mailed FFD and their response was they had not totally abandoned it but will still use it in some situation , probably mutual aid etc. I would look for them to use it on M/A channels like IA-Fire. In addition (for you Fire truck buffs) they have replaced their 89' aerials with 2001 LTD Aerials (3871 and 3877)

Con Fire is expecting 8 new type 1 Engines from KME and 7 brush rigs from Westmark , sometime this Spring.

The statement is somewhat true. There are 3 places a medical helicopter can LAND in San Francisco:
The airport, Pier 64 and Seeton. That's slowly changing. But as of today, if a patient needs to be airlifted to SF General, we'll land at Pier 64, and request a ground ambulance to transport them to SF General.

We can fly in San Francisco, just not LAND.

Evan, the Airport is 15 miles south of San Francisco and Seton is in Daly City, close, but not actually in SF. Pier 64 is and certainly would be the closest to relay someone to SFGH and other hospitals in the City. Now SFPD "used " to be able to land on the Hall of Justice and out by Lake Merced where their pad was (by the SFPD gun range) but that information is a good 15 years old +. Since we are on the subject, has anyone heard any update on when/if SFPD is going to get airborne again?

Just wanna get my 2 cents in and then I'll back out. Medical Helicopters can land in SF @ Pier 32. I've seen them many times land there .CALSTAR,REACH.MediFlight,CHP,LifeFlight and once the Coast Guard landed there. It is a designated landing sight for Air Medical Transports. It does take time though because the patient has to be ground transported to which ever hospital. Pacific Medical Center (Heart) St.Francis Hospital (Burn) SF General (Trauma). The City for years has been working on a plan to put a pad somewhere near the San Francisco General AKA:The Mission, The General. But the BS Politics and the FAA and the winers "we don't want the noise" has blocked every attempt (Ed, I am a Native SFer so , I can B_ _ _ _! That's why I don't live there anymore :) Pier 32 for those of you that don't know is a one of the piers that a huge 5+ Alram fire years ago. Pier 33 also burned up in the fire and the remains are still there. They decided not to build the pier back up for what ever reason. It is located just below and South of the Bay Bridge. It is flat now and is also used for a Bus parking Lot for the Giants games.....but there is still plenty of room for a Helo to land Another fact Nash Bridges show was filmed on that pier. If you watch the later epeisodes the office was there. Actually it was a barge that was tied up to the pier but, that's besides the point. Seton (Our Lady Of 280) has a landing pad but, Seton is not a Level 1 Trauma Center and they would probaly not take the pt there. Peninsula Hospital in Burlingame has a pad but lost their Trauma designator so again, They wouldn't go there. Eden...I'm sorry I don't know much about it. This is reasonable. I think you are confusing laws preventing law enforcement from using illegal methods to obtain evidence with the lack thereof for civilians. If I were to break into my neighbors house and find a methampetamine lab and notify the police, they would prosecute him (and possibly me for B&E). It would also open me to civil suit by my neighbor, but his conviction would stand.

The laws you are thinking of are designed to keep the police especially cognizant of citizen's rights but don't prevent them from acting on tips.

Yeah OK, maybe I did get a little hot, HEY BEN, please don't use that word,
us natives HATE IT. Thanks in advance. as to the event, maybe the other places were "red" and Louis M.DAVIES (not Davis) was the closest place at the
time? Weather could have been a factor too. Since I went on my PRO San Francisco tirade earlier, my I State now I feel much better, not because I went a bit crazy but Because the GIANTS just whipped the DODGERS (see it Jeff
?) 9-2 Barry Bonds going 3 for 4 with 2 home runs and 5 RBI. (yeah I know it ain't scanner related, so catch my next post to make up for it)

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-04-03 04:00:28 UTC
From: Evan Platt
Topic: 10163 Message: 10169

Sorry, perhaps my post was badly worded - the 3 locations mentioned are the closest a Air ambulance would be able to drop a patient - they're not necessarily IN San Francisco, but nearby.

It appears SF is in the works of clearing the way for air ambulances and other air traffic to have other options of locations to land.

And (I guess I could reply to the other post, but it's the same subject, so...) RE: Mobile11's post: Yes, numerous area hospitals have helipads that aren't level 1 trauma centers. That by no way means you won't see a air ambulance there - many times a traffic accident will occur nearby a hospital that's not a level 1 trauma center, but that has a helipad. Instead of shutting down a freeway, a ground ambulance will transport the patient to the helipad to rondevous with the bird.

Of course, the exact opposite does occur - an interfacility transport I was on we picked up a patient at a hospital, and landed in Sacramento at a construction companies helipad that has a agreement with AMR to allow its use for transports. Upon seeing "PVT" on the helipad, I was wondering if the pilot was out of his gord!

For CALSTAR 2, having our 222 located at a hospital right off the freeway makes it convienent for a ambulance to meet up with us. :)

Eden is a level one trauma. One of 2 in alameda county.. The other is Highland Hospital.. I can't imagine that they wouldn't take the pt to eden instead of s.f. Are we sure that there wasn't a change of hospital. Maybe originally it was going to s.f. by REACH, then since he was a bleeder decided to divert ground to Eden, which is the closest trauma to livermore... -----Original Message----- From: Mobile11@... [mailto:Mobile11@...] Sent: Tuesday, April 02, 2002 6:15 PM To: bayscan@yahoogroups.com Subject: Re: [bayscan] Re: Helos./ SF Just wanna get my 2 cents in and then I'll back out. Medical Helicopters can land in SF @ Pier 32. I've seen them many times land there .CALSTAR,REACH.MediFlight,CHP,LifeFlight and once the Coast Guard landed there. It is a designated landing sight for Air Medical Transports. It does take time though because the patient has to be ground transported to which ever hospital. Pacific Medical Center (Heart) St.Francis Hospital (Burn) SF General (Trauma). The City for years has been working on a plan to put a pad somewhere near the San Francisco General AKA:The Mission, The General. But the BS Politics and the FAA and the winers "we don't want the noise" has blocked every attempt (Ed, I am a Native SFer so , I can B_ _ _ _! That's why I don't live there anymore :) Pier 32 for those of you that don't know is a one of the piers that a huge 5+ Alram fire years ago. Pier 33 also burned up in the fire and the remains are still there. They decided not to build the pier back up for what ever reason. It is located just below and South of the Bay Bridge. It is flat now and is also used for a Bus parking Lot for the Giants games.....but there is still plenty of room for a Helo to land Another fact Nash Bridges show was filmed on that pier. If you watch the later epeisodes the office was there. Actually it was a barge that was tied up to the pier but, that's besides the point. Seton (Our Lady Of 280) has a landing pad but, Seton is not a Level 1 Trauma Center and they would probaly not take the pt there. Peninsula Hospital in Burlingame has a pad but lost their Trauma designator so again, They wouldn't go there. Eden...I'm sorry I don't know much about it. Ok, I splashed some water on my face and I'm OK now <<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<>>>>>>>>>>>>>>>>>>>>>>>>>>>>>> Paul Young-KF6YYI 145.350 - 88.5....Sonoma Mountain Lat:38.42.58 Lon:122.66.65 USCGAUX (http://www.cgaux.org/) : Oyster Point Mobile 11 IPN (http://www.incidentpage.net/) - SF0 002 NWSS (http://www.wrh.noaa.gov/Monterey/spotter.html) - SO 10 "Can You Hear Me Now?.....Good!" actually there are three..... The third also has a pad. Childrens Oakland. Livermore trauma will almost always go to eden. Depending on # of pts, diversion status, weather etc. If there is a MCI/MVI you could see pts going to all three.

I happened to run into my EMR teacher tonight at OES and she pointed out that even if the new academy grads are EMTs now, it will take years for that to trickle down to all the officers in cruisers.

But what a great idea to make CHPs be EMTs! Lives are saved in the first hour. The sooner somebody establishes ABC, the more lives can be saved.

Enough politics, and apologies to anybody who dislikes Frisco.

10176. Stopped for mobile scanner display

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-04-03 07:03:55 UTC
From: ka5s
Topic: 10176 Message: 10176

I was stopped by the CHP tonight because the VR5000 on the dashboard looked like a television or video display screen in the drivers line of sight, which is unlawful. Lots of modern radios have pixelized screens; the VR5000's is large and 'waay too bright, so it does look like a TV. There's a modification to let the dimmer actually work and I shall apply it.

She also pointed out the radio could fly back and hit me if Iwere rear-ended. A good point. I raised it MYSELF in a discussion on using multiple scanners! Humph. Now I will have to get rid of the velcro, and drill holes for a mount strong enough to stop that from happening. Because she WAS right. About that, for sure.

CHP officers have been EMT's for some time. They also
have paramedics, the observer on the helo. They were
EMT-1PS until the different designators were done away
with about 10 years ago.

Does anyone know what frequ's Oakland Children's Hospital uses for Helicopters or anything else? I know their security is on 155.280. And, while I am asking questions, there used to be heart monitor telemetry between 467--469 MHZ at least at Alta Bates and John Muir hospitals. Does anyone know where they have changed too? I have been near ABH lately and can't find a thing in that frequency window.

The R9000 is worth more than half the vehicles on the road. ;-)

The CHP complaint is quite silly as any satellite nav system display built into a vehicle is more like a TV than a radio, and I see plenty of those on the road.

Helos *can* land many place in SF. However, they don't seem to land in this county. The Coasties land down in San Mateo County and otherwise, people come in by ambulance.

There are five or six designated helo spots in SF, of which the piers are two. However, they aren't generally used.

That # has been disconnected for about a year....

707-551-4100 is the correct non-emergency for the CHP GoldenGate
Communications Center in Benecia.

Suggestion for everyone: Please try to take some pride in providing the
correct information. It doesn't take much time to verifying what you are
thinking of posting. It seems the misinformation is kinda a regular thing
round these parts.....

> round these parts.....

well i posted that original message...i got that number from the chp website, so i took the time to get the "correct information" directly from the source. i used to be a dispatcher and the number you gave is correct. since i havent been a dispatcher in 6months, i thought it changed since i saw the different number on the chp web site

If it helps any, one night in Mountain View, we had unit 420 and 440 for calls. The Paramedic on 420 said he was stationed at ECR & Grant, but that may have just been that night. (I went on 4 calls on the engine that night - from 6:30 - 9! That's what I call BOOKING!)

If you are on a cell phone, spend the money on information and just ask for the non-emergency number. I make about 3 or 4 of these calls a year. $4, big deal, case closed, no list needed.

Aw you young guys !!!! , I remember SFFD Engine 17 (then Engine 11) getting 70 calls in ONE shift (24hours) including a working structure fire in which they were out One hour. So they did 69 runs in 23 hours. the year was 1969. The following Year, my first in the SFFD Reserve, I rolled on Two - 4 alarm fires and One - 5 alarm fire in 24 hours. Now that is busy.

As far as medics are concerned, apples and oranges are being compared here. You people are talking about 2 different counties. I can tell you FOR SURE, in San Mateo County Medic 110 runs out of Menlo Park Fire Station 1 , Medic 107 runs out of Woodside Station 7 , Medic 109 runs out of Redwood City Station 9 .

All 911 ALS Evil Empire (AMR) ambulances in San Mateo County is dispatched by the County Public Safety Communications Division. Here is the print up of that in last months JEMS Magazine.

The International Association of Fire Chiefs' Fire Service Award for Excellence for 2001 was presented to the San Mateo County (Calif.) Prehospital EMS Group, recognizing a two-year effort to create a Joint Powers of Authority (JPA) that includes all cities, fire districts, and AMR ALS ambulances in the county. Under the JPA, all cities, fire districts, and AMR ALS ambulances agreed to give up their individual dispatch centers and combine fire/EMS communications with the County Public Safety Communications Division. They also agreed to disregard geographic boundaries and permit the closest ALS engine/ambulance to respond to every call, regardless of jurisdiction. The new policy has been a huge success, with the county increasing its number of firefighter/paramedics on engines from 60 to more than 220, staffing 59 ALS engines and more than 45 ALS Ambulances throughout the county.

There is a blurb about a remote control head for the Uniden 780 in the latest Monitoring Times. My copy at the moment is sitting on the shelf at Barnes and Noble. ;-) I recall the manufacturer was Scanmaster, but searching the net doesn't turn up any hits.

Anyone on either list have a copy of Monitoring Times? If so, who makes the remote head?

From: Harry Marnell
Topic: 10232 Message: 10245

I'll look it up, but I think it was estimated at $350 for the radios, and another $300 for the cards...Ok, here it is, from my own page at http://www.snowcrest.net/marnells/uniden-digital.htm

Tuesday afternoon updates, January 8 - 2:10 pm PST

According to a report by Norm "Mr. Scanner" Schrein at http://www.bearcat1.com/ces.htm, "Each scanner will have a suggested retail price of $350.00 and will be available late in 2002." He also reports that "the Bearcat APCO 25 digital card -- the BCi25D...will be just over $300.00." The units will receive analog, do trunk-tracking, etc right out of the box, but if you need digital demodulation, you'll need the card.

and then...

Tuesday evening: a little price hike already...

From: "Spectron - Tom Walker" <tom@...>
To: <socalscan@yahoogroups.com>
Sent: Tuesday, January 08, 2002 20:46

Subject: RE: Uniden scanners I am at CES and had the opportunity to talk to a Uniden Manager. Radio will be released end of 2002, desktop and handheld. Aproximate pricing is about $350 and a APCO-25 decoder card will add about $325-$350 to the price of thescanner.

That photo was taken at the Uniden CES booth. The radio was pure vaporware
at that time (jan 2002). If you could see down that slot, you would not see
a connector but rather the inside of the chassis.

In the low $300 range was what I was told. I can see it failing at that price, but in the low $200 range might fly.

Nothing in my rural corner of N California will likely RUSH to digital... we have more frequencies on every band available than a cob's got corn, so OUR channel loading is insignificant.

Having said that, though, eventually DIGITAL will be a much wider issue than trunking has ever been, and look at the thousands and thousands of trunking scanners. The huge majority of smaller agencies will never need - or want to pay for - all the doodads of trunking, but they'll all need to eventually get to narrow-banding and that will virtually guarentee P25 compatability.

Just my thoughts

Scanmaster has been touting the remote head idea for so long. By the
time it shows, the model replacing the 785 will be born.

They have some little mention of it on their website (Don't recall the
URL) but they provide no details and say they're just working on it.
Maybe the article will push them to *speed* things up.

I think the proper spin would be the demonstration is targeted towards recruitment.

At least the F/A-18 flyover cost is better spent than the C-37A side trip that has been in the news.

Unfortunately, the FCC stuff is offline for the weekend. Is this part of the same deal where Nextel had offered APCO a couple million to "help" them study a transition of public safety frequencies off 800 and down to the 700-band?

I thought APCO was trying to remain ethical and was reluctant to accept the $$, as it would be at least a perceived conflict-of-interest. Did they decide to take the money and now PRETEND to stay unbiased?

Am I missing something, or has Nextel leapfrogged way beyond Motorola to become the "Microsoft" of the supposedly "PUBLIC"-safety communications community?? Say it isn't so...

What kind of nonsense is this? Nearly any rifle calibre can pierce much of the commercial-grade body armor out there. Wash your mouth out with soap, there's no such thing as "cop killer bullets" . . .

But: the question of what someone is doing taking a head shot at long distance is curious!

Typically rifles are not used in street crimes, but there are a few handguns that take the .223 (Lone Eagle for example), hence the term cop killer bullet is correct.

I recall a yard to yard search in Fremont where it was known that the perps were shooting .223, as the cops already had one stiff to examine. The call went out for volunteers to do the yard to yard, so I suspect the Fremont PD believes in cop killer bullets, even if you don't. In this particular event, the victim was killed with his own hunting rifle. The perps were the Flowers brothers, who killed their landlord. [It was either the 4th or July or New Years, as I recall it was one of those holidays where people shoot their guns in the air.] The name Patrick Flowers comes to mind. If you can find old Patrick, you are welcome to take up the discussion with him, but notify your next of kin before starting the discussion on the merits of the .223.

10263. Flyover / Playing possum

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-04-06 17:43:57 UTC
From: Jordan Hayes
Topic: 10263 Message: 10263

> Do cops wear body armor? Yes. Does the .223 penetrate body armor? Yes.

But so do most other rifle calibres.

Maybe you are coining a new "cop killer bullet" term, but it has historically refered to a class of handgun bullet that has "special properties" (usually teflon coated, but I think there were others) that people have used to show that somehow there's an industry out there getting geared up to kill cops. I think the original discussion was about "Black Talon" cartridges, and there's no evidence to support the opinion that they penetrate body armor any better than a non-teflon coated bullet in the same calibre or that they were specifically produced to penetrate body armor.

Also, no police officer has ever been killed with a Black Talon.

So uh, no, .223 is *not* "aka Cop Killer Bullets" . . . except perhaps by you.

-=-=-=-=-

On-Topic: did anyone catch any A/A for the F-18s at PacBell Park yesterday or know what unit they came from, etc.? Several people I spoke to were spooked by the idea of fighters flying low over the bay :-)

Last night I was listening to Berkeley PD talking about a nearly dead possum in the middle of San Pablo Avenue; the dispatcher told the officer that if he couldn't get it to the side of the road, he could "dispatch" it there in the street; he warned not to let the round deflect off the road.

Good thing that guy was carrying Possum Killer Bullets.

At what point does someone's contribution on the list
exceed the pain of keeping them on...

Knifes also penetrate body armor. Are these also 'cop
killer'?

The 120mm cannon firing uranium depleted sabot rounds
also penetrates body armor. Is this 'cop killer'?

Certain groups in society are over represented in the
death of police officers? Are these groups to be termed
'cop killers'?

The problem here is that someone is wearing 'rational
thought armor' which is impenetrable by logic or reason.

I sugguest someone find a life or a hobby....

From: robert sanford
Topic: 10270 Message: 10270

I don't know what this means but I just heard a broadcast over the Marin CHP frequency 42.160 for all officers to pick up their helmets and PR23's? or something like that. I assume that is some sort of high powered rifle. That is all they said. No mention of anything going on to do?

Robert

Pardon my ignorance, but is a remote control head the same thing as a remote control? Is it a device which allows you to control the scanning remotely, or does it do something special?

By control head I think they're talking about essentially the "face" of the radio, with the buttons and knobs. The bulk of the radio's innards are elsewhere... like under a seat or in the trunk, so you only need a limited amount of space to mount the head. Then cable(s) run to the radio itself. Very important in todays cramped car interiors.

10279. Re: [bayscan] BC780 remote control head

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-04-06 19:57:25 UTC
From: Jake Hickok
Topic: 10232 Message: 10279

A remote head is popular in the ham community. It places the guts of
the radio in a box that can go in the truck, behind the seat or
anywhere. Then a single cable goes from the box to the "remote head"
where the display and controls are for the radio. The remote head can
be placed on the dashboard, eliminating the need to clear room for a
huge radio, all you put on is the head.
An example is
http://www.icomamerica.com/amateur/dualmobile/index.html

Jake

Here goes Gary making absurd claims which can't be let slide, again.

By the logic shown below almost ALL rifles use "cop killer" bullets. There are only 2 handguns which were made in .223, both are discontinued. The "Lone Eagle" to which you refer in another post (and must've found by a web search because no firearms dealer I know has ever even heard of one) was a hunting pistol and a single shot (load, shoot, reload). (I found it from a google of ["Lone Eagle" .223])

Don't believe everything you hear on KPFA.

Harry et al. I would be surprised if they sell very well in the bay area. Although I will get the BC250D, I am not interested in the card for digital, at least not now. SFPD has several digital channels, but they are slowly going encrypted. Santa Clara Co... S/O has two, but its note worth the extra $300+ for just two, at least not for me. But it gives me the option for the future. Now if I was in your old stomping grounds Harry, it would be a different story. Orange County is loaded with digital, but once again, most of the LE stuff is encrypted. But there is LAPD. Still, since my main interest is Fire, I can still get LAFD and LACoFD with any 800 MHz. So its still fun to visit down there.

I see there was a clash between supporters of the two sides involved in the middle east violence , in San Francisco yesterday. More coming next week for Beserkly. Sounds like it may be a good time to monitor those cities prone to demonstrations etc. (SF and Beserkly being the main two , but I would include Oakland and San Jose as well) Sounds like it may be lots of Hats and Bats for the LEs in those cities.

Yep... Brian Humphrey noted a couple years ago that it "won't be long" before LAFD will be required to go to digital on their existing 800 MHz channels, though they have absolutely NO intention of going trunked (thanks to the waiver they got before going online). I believe his words were "within 10 years."

I'm not one to ever buy a totally new scanner (or ham radio) the first batch that comes out, as there are always SOME bugs that need time to be found, reported, verified, fixed, built and distributed. At least a year... except in emergency... or in the event the thing comes out the first time. happens occasionally, I guess.

Harry

OTOH, wouldn't these folks likely be up flying maneuvers or test-driving anyway a lot of the time? Might as well fly over a bunch of taxpayers occasionally rather than over a non-existent area in the Nevada desert.

1:20 PM Saturday Just had a F-18 Blow the doors off here in Santa Rosa. He/She was fly low and fast. No soundbarrier but was fast. Heading west and very low. The direction was SouthWest away from the airport here. BTW REACH Helicopter is having a open house this month and will be on display at the Charles M. Shultz Airport. Check REACH (http://www.mediplane.com/) for more details.

10297. Re: [bayscan] SF POLICE INVESTIGATING WESTERN ADDITION HOMICIDE

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-04-07 01:46:24 UTC
From: Bryan Carmody
Topic: 10254 Message: 10297

When "they" refer to cop killer bullets, they are refering to Glazer Safety Slugs. These were developed by Isreal for close quarters combat. They will pierce a bullet-proof vest but still not go through the wall behind the target. Reduction of colateral damage. Also used on aircraft in-flight. The bullet will not pierce the skin of the aircraft. The load is typically not a rifle slug. They make it for sub-machine guns. But that 9mm load will obviously fit into any 9mm hand gun. Any cop knows on the street that a rifle bullet will kill him. It says so on the vest he is wearing. Even a threat Level IV vest wont stop a rifle. So it's two different things you guys are mincing about.....

Fellow Scanner Enthusiasts,

Yahoo/Geocities has finally become the bureaucracy I feared when Yahoo acquired Geocities. First of all I can no longer upload my pages using their FTP server and I can no longer download email using a POP3 server. For both email and uploading you must use their online versions.

As a result I have purchased a domain for this site, http://www.scancal.org. Now that Scanning Central & Northern California Frequencies has its own domain I hope to expand this site and make the current frequency guides more accurate and complete.

Please update your bookmarks to reflect this change. Please also note that I've changed my website email address and will be doing so one final time in the coming days. As always I look forward to hearing everyone's insight and contributions to ScanCal.org.

Sincerely,

Mike Motroni

He was probably excited because he knows that area is almost a wilderness. There are few roads out there, no fire hydrants, and even no phone or PGE. It's rugged country and quite arid. So a wild fire out there would be tough to fight.

What Uniden radios have sufferend such growing pains?

The 245 got rid of the five second multitrack delay.

The 235 got an attenuator function.

I haven't heard of any 780 firmware changes since it
was introduced?

So what 780 s/w version are folks seeing on their radios?

From: gary
Topic: 10285 Message: 10304

Listen to KPFA (94.1) and they will tell you where the protests will be before they happen. Sometimes there will be a heads up on the indy media page and/or photos of the protest:
http://sf.indymedia.org
The protest you mentioned is written up here:
http://sf.indymedia.org/news/2002/04/120947.php

The Berkeley Bart station around 5PM is a typical hot spot, as well as the federal building in San Francisco. Often the protestors spoof Michael (Weiner) Savage on KSFO in the 4 o'clock hour and warn him there will be a protest and that his listeners should show up for a counter protest. A good way to get the word out. ;-)

Topic: 10305 Message: 10305

Way off topic - sorry - but I can't help it.

>Ice-T have a record called Cop Killer ?
>and Now he plays a cop on T.V

Yes he did, and it was a damn shame he didn't have to pay restitution
to cop widows nationwide until he was bankrupt.

He plays a cop on TV? I didn't know that. The cesspool known
as "entertainment" is certainly getting thick with turds.

Scanning is much more fun than TV. Glad I don't have one.

Non-existent part of the desert you say?
http://www.lazygranch.com/red_flag_0103.htm
http://www.lazygranch.com/red_flag_0201.htm

There is something like a MOA (military operating area) not far off the gate, but they don't use the term MOA. You can get a heads up regarding exercises off the coast checking out the military notams page:
https://www.notams.jcs.mil
Generally I do a radius search, say 100 miles around n37 49 W 122 29 (near the Golden Gate Bridge)

The activity will read something like this:
A1346/02 - AIRSPACE RESERVATION ACTIVATED ON AREA BRAVO STATIONARY RESERVATION WITHIN AN AREA BNDD BY 4040N 12710W 4040N 13200W 3730N 13200W 3730N 12710W. SFC FL200 09 APR 00:01 UNTIL 12 APR 00:01

This location is about 160 miles west of Eureka.

10307. Re: [bayscan] Pac Bell Park Freqs???

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-04-07 04:22:50 UTC
From: Jim Gammon
Topic: 10228 Message: 10307

Hi. Well, having spent much time at PacBell park playing in a band over the past two years, I can say that as of last year, the SF. PD used 460.025, CLEMARS but no longer seem to do so. The SF Giants frequencies are the following: 935.2375 Operations 1, 935.6625 maybe security, 936.6375 Tac 2, 936.6625 Tack 3, 936.2375 Travel 4. They also use wireless mic's to announce various events for music events from the field, and have kids announce batters on the day weekend games, but I could never nail down those frequencies. I did have an audio visual guy there tell me the wireless mic's were between 600 and 700 MHZ. I searched, but never could find anything. Good luck, happy scanning, and if you find anything new, please share it. Best, Jim

From: Ben Kellogg
Topic: 10308 Message: 10308

Here's a question to throw at you guys since i have no idea why this happens..

Why is it easier to hear a regular main freq for example con fire freq's but i can never hear anything on their tac channels.. Their main freq come in perfectly to me..

The simple answer is....a repeater.

In some cases where the input freq is the same as the output freq
there's a receiver voting/simulcast network which takes the audio from
the best site and then retransmits it at all or designated sites.

Wayne

Topic: 10248 Message: 10314

> I would be surprised if they sell very well in the bay area.

I'm interested in replacing my -235 handheld, and I'd get a -245 today but I've heard that th -250D will be "like a 780" ... I've been hoping to find a trunking milair-capable scanner, and it sounds like, digital or not, the -250D will be the one to get. So I'll wait, I guess.

Can anyone confirm that the -250D will _not_ have milair? If so, I'll keep looking.

Thanks,

/jordan

Usually CALSTAR and REACH just use CALCORD 156.075 to communicate to the
units on the ground but I do and am actually hearing them now on the local
fire frequencies.
I assume they can dial up any frequency or have them already programmed
into their radios.
They are going to be coming up on Woodacre Fire in a moment on 37.100

I can only tell you about REACH in Sonoma county. Their "business" channel is MED 10. They use the county fire freqs, the med channels and 155.265, 155.100, 155.355. I have heard them transmit on CALCORD as well. And of course all the air freqs.

Anybody:

I would like to get frequencies for the Mall Security and other Security in the Bay Area. I have a back up scanner that is collecting dust and would like to plug some numbers for the Local Malls and Security frequencies.

Do you know where I can get a hold of a book on Security frequencies.

I know Scanner Unlimited use to carry such a book, but that was ages ago.

Thanks

Willie

10324. ANYBODY GOING to Livermore?

From: Harry Marnell
Topic: 10324 Message: 10324

If anyone's going to Livermore today, I'd sure like to get a copy of Kelty's disks for STATE OF CALIF AGENCIES and also NORTH COAST on DISK if he has them. Or else at least a STATE of Calif BOOK for 2002

Please contact me ASAP if you're willing/able to try and get it... I can mail or PayPal the payment immediately this afteroon if someone can get either of those three.

Please confirm BEFORE you go... I wouldn't want half a dozen guys buying copies for me.

Thanks a whole lot...

Harry Marnell

Willie,

Try this. It was updated last month. Keep an eye on this group, as they post updates for this addendum frequently.

Does anyone have the frequencies for the State's Alcoholic Beverage Control in San Francisco? I don't find it in Kelty's Trunked California, so I suppose it must be conventional. Might make interesting weekend night listening . . .

10331. ghost frequency

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-04-08 03:40:15 UTC
From: Ben Kellogg
Topic: 10328 Message: 10331

OK this is a weird one... I redid all the freq's in my 780 last night.. now i am hearing what sounds like Santa Clara county fd on 153.440.. Is that possible? thought they were trunked? The strange thing about it is.. When i go into my excel spreadsheet to check the freq on the channel #. It's not in there. I do a sort by freq.. The freq is not even in my list.. So i don't know how it got there.. I'm hearing something about San jose truck 7 responding, and medic 5, bc 1 and hear snip its of something about santa clara... I check the fcc and nothing matches up with that freq...

anyone have any ideas?

From: robert sanford
Topic: 10335 Message: 10335

Something is occurring on the coast guard frequency 157.050
I heard the CG stating some guy was found on the beach bloody and
disoriented and that they were requesting Henry 1 for the search for his wife.
It was unknown how they ended up on the beach.

Bob only buys stuff at Livermore, but he does sell at Foothill. [Tells you which flea market has the better deals. He will sell you a manual at Livermore if you make arrangements ahead of time.] To get something on disk, you absolutely need to make arrangements.

His number is 408-269-5814. Email, well lets not talk about that.

10345. Re: [bayscan] CALSTAR REACH

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-04-08 05:27:13 UTC
From: Evan Platt
Topic: 10313 Message: 10345

It depends on the area.
Calstar 1, based out of Concord, and Calstar 2, out of Gilroy, are 'dispatched' via telephone. They'll respond on the State 800 frequency, 867.5375. Calstar 1 uses a repeater based on Mt. Vaccaville, Calstar 2 uses a repeater based on Loma Prieta. We're dispatched via CDF Felton.
Calstar 3 is in Auburn, and Calstar 4 is in Ukiah, they're both dispatched on, I believe, Howard Forest CDF (I'll attempt to confirm this). They are dispatched over the air via two-tone toneout. Calstar 5 and 6 are our newest ships - Calstar 5 is based out of Salinas, and 6 is based out of South Lake Tahoe. I believe 5 is dispatched via Felton, and 6 is dispatched via two-way radio.

I'll attempt to confirm the unknowns tomorow.

(As I'm in Sunnyvale, and I'm primarily at Calstar 1 and 2, I sometimes get behind on my knoweldge on our other bases!)
Oh, and I can't forget our fixed wing - Calstar 70 is based out of Jackson, and is usually a pre-arranged flight.

We'll typically use CALCORD, however we can use almost any frequency an agency asks us to use. Yesterday, Calstar 2 flew to Hollister Hills motorcycle park and used a State Parks frequency, 855.4875 IIRC.

Topic: 10341 Message: 10346

I saw it driving to the Livermore flea market (with KPFA on the radio of course). Smoke could be seen from Sunol. It looked like one of those big custom homes under construction was burning.

10347. San Rafael PD gone?

Yahoo group: bayscan (2002-01 — 2002-06)
Date: 2002-04-08 05:29:36 UTC
From: robert sanford
Topic: 10347 Message: 10347

There was just a code 777 over the Marin Sheriff's department sent out by San Rafael PD but when I turned my scanner to 864.0375, the frequency that they are normally on I hear NOTHING!
They had a failed trunked radio system that used to have a constant carrier on the frequency but I could monitor them.
Im wondering if they already shifted them to the new trunked system that Marin is suppose to have at some point in the near future?
I was under the understanding that San Rafael was going to be the first department to go to the new system due to them having to deal with that failed trunked system years ago.

Anyone know anything??

Thanks Robert

10348. San Rafael PD

Well it seems Im getting them on the other frequency they used to use
859.9625 but they dont have that constant carrier that they used to have?
Very weird.
It seems to be operating like a normal repeater now which is great since I
can actually put the frequency into a scan bank. Before that was impossible.

Anybody:

Recently, I have been trying to access the bayscan file to get a hold some frequencies.

But unfortunately, I have forgotten by Yahoo ID name and password that I have been using. Is there anyway I can retrieve my name and password or do I need to reenter as a new member again? Of course it has been a long while since I have gain access to the bayscan files.

Any suggestion?

Willie

Willie,

Try this link:

>http://edit.yahoo.com/config/eval_forgot_pw?new=1&.done=http://groups.yahoo.com/&.src=ygrp&partner=&.intl=us

Basically you go to the sign-on page and click "password lookup."

If you have forgot your username maybe a moderator can look it up for
you since regular users can't search the members database.

Wayne

Thanks for the contacts, Dave. Gosh, 30 years later I sure don't remember which garage.. .but it was the one downtown there at 3rd & Lucas (?)... "G1" I suppose! There was also a dispatcher with an English accent, the only thing I specifically recall about him was his distinctive pronunciation of the number 9... "NI-yun"

harry

"Henry on the 3rd & Vermont?... who can take 561? ... anybody yellow to Boyle Heights?.... Sanborn Junction, who can take Sanborn Junction - anybody near? OK, 4612, check: 3rd & Vermont's at Safeway, and don't break the eggs... who's yellow to Florence & Fig, regular customer, anybody near?....."

them was the days! Sure wish I'd made a tape of one of those really good dispatchers.

My egroups password and username got switched to a dormant yahoo email account when they took over, so I lost control of my groups for a while. I phoned Yahoo ((408) 349-3300) and the message says you can only talk to a live person if you have a premium account. Of course I ignored that and waited for a live person to answer, then gave them my email address, and they gave me the username. Once I had the username, I was able to use the login page to get my password reset.

You can't start a new account going to an existing email address.

I ordered the optional Active Safety Stereo (tm) in my truck. Whenever it receives KPFA programming, ASS garbles the signal to prevent brain damage. All that comes out of the speakers is the sound of sheep bleating.

KPFA (94.1) is slightly left of the political center. It is owned by Pacifica and is listener supported. How loyal are the listeners? When there was a plan by Pacifica to make the network more mainstream, 20000 protestors took to the streets of Berkeley.
